BioMark Receives Health Canada Protocol Approval

Vancouver, British Columbia – (December 8, 2014)–BioMark Diagnostics Inc. (“BioMark” or the “Company”) (CSE: BUX, FSE:20B) is pleased to announce that BioMark has been granted an Investigational Testing Authorization (ITA”) by Health Canada’s Therapeutic Products Directorate (“TPD”) adopting the Company’s protocols and reference standards for reference laboratories across Canada. The authorization also will allow BioMark to sell up to one hundred and eighty (180) of these devices as part of the ITA for investigational purposes.

The ITA recognizes the proprietary protocol the Company has developed and internationally patented for urinary excretion of Acetylamantadine by cancer patients. This protocol involves the use of BioMark’s Acetylamantadine Assay Standard for Liquid Chromatography – tandem Mass Spectrometry (LC-MS/MS). This assay was developed by BioMark in order to establish a clinical diagnostic reference standard as part of the protocol when evaluating urinary excretion of acetylamantadine as a predication cancer presence.

President and CEO of BioMark, Rashid Ahmed comments: “This is a necessary achievement for BioMark since we utilized industry gold standard using LC-MS/MS. The authorization provides BioMark the ability to conduct tests for validating the use of our internal system for labs and sets the stage for licensing later.”

The regulatory submission and documentation was guided by the regulatory team at St. Boniface Hospital Research Centre.

About BioMark Diagnostics Inc.

BioMark is developing proprietary, non-invasive, and accurate cancer diagnostic solutions which can help detect, monitor and assess treatment for cancer early and cost effectively. The technology can also be used for measuring response to treatment and potentially for serial monitoring for cancer survivors.

Further information about BioMark is available under its profile on the SEDAR website www.sedar.com and on the CSE website www.thecse.ca.
