October 12<sup>th</sup>, 2018

Zanzibar Gold Inc. (ZBR – CSE) announces that it has completed its follow-up exploration program on the Bondo area Prospecting license.

This exploration program was planned to further develop and evaluate the presumed gold bearing layers in the main old river channel that is fed from adjacent drainages that are known to contain gold bearing gravels.

Auriferous gravel was encountered in the first pit that indicated the stratigraphy is similar to that found on those adjacent streams feeding it, although at a deeper than anticipated depth.

The company is continuing to evaluate the gold discovered (analysis of gold content), the quantity and the greater depth to the auriferous unit and is evaluating the merit of continuing to expend further resources, time and energy on this project in Africa.

Regardless of this evaluation, the company has been investigating other resource opportunities for lithium in SW USA and oil and gas in Louisiana in SE USA.

Glen Macdonald, Director, has reviewed this news release and is the QP for the company.

On behalf of the Board

S.A.Farrage President
