Financial instrument risk exposure

The Company's financial instruments are exposed to certain financial risks, including credit risk, liquidity risk, and market risk.

(a) Credit Risk

Credit risk is the risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation. The Company has exposure to credit risk through its cash and cash equivalents. The Company manages credit risk, in respect of cash, by maintaining the majority of cash at highly rated financial institutions.

The Company's maximum exposure to credit risk at the end of any period is equal to the carrying amount of these financial assets as recorded in the statement of financial position. At May 31, 2024 and November 30, 2023, no amounts were held as collateral.

(b) Liquidity Risk

Liquidity risk is the risk that the Company will encounter difficulty in satisfying financial obligations as they become due. The Company manages its liquidity risk by forecasting cash flows required by its operating, investing and financing activities. The Company had cash and equivalents at May 31, 2024, in the amount of \$299,137 and working capital of \$288,831 in order to meet short-term business requirements. Accounts payable have contractual maturities of approximately 30 to 90 days or are due on demand and are subject to normal trade terms.

The maturity profiles of the Company's contractual obligations and commitments as at May 31, 2024, are summarized as follows:

	Total	Less Than 1 Year	1-5 years	More Than 5 Years
Accounts payable	\$ 41,550	\$ 41,550	\$ -	\$ -
Total	\$ 41,550	\$ 41,550	\$ -	\$ -

(c) Market Risk

Market risk consists of interest rate risk, foreign currency risk and price risk. These are discussed further below.

Interest Rate Risk

Interest rate risk consists of two components:

- (i) To the extent that payments made or received on the Company's monetary assets and liabilities are affected by changes in the prevailing market interest rates, the Company is exposed to interest rate cash flow risk.
- (ii) To the extent that changes in prevailing market rates differ from the interest rates on the Company's monetary assets and liabilities, the Company is exposed to interest rate price risk.

In management's opinion, the Company is not exposed to significant interest rate risk as the risk is primarily on cash and cash equivalents.
