

MEDXtractor

Corp.

PRESS RELEASE

Calgary, Alberta – September 14, 2021

For Immediate Release - Medxtractor Corp. ("**MedX**" or the "**Corporation**") (CSE: **MXT, OTC:MXTTF**) provides a corporate update.

Medxtractor ("MedX" or the "Corporation") (CSE: MXT, OTC:MXTTF) reports progress as follows:

1. The Corporation's proprietary Reference Database now contains over 1000 reference records consisting of extensive, biometric and associated electroencephalogram ("EEG") data. The Reference Database development is expected to meet the completion target of October 31, 2021.
2. the Corporation's mental health guidance grid known as a Contextualizer ("MCT") is designed to be used in combination with associated EEG data to predict probabilities for up to nine underlying mental health conditions. The MCT has now been completed by a highly qualified Psychologist and Psychiatrist and contains over 19,000 data elements that are now being incorporated into supervised machine-learning ("SML") algorithms.

James Durward, President, states: "Delivery of the MCT is a major step forward in the development of our mental health diagnostic application. While machine-learning provides fast, deep correlation and mathematical rigor, it does not provide context. MCT provides context by extensive scoring of data element relationships with mental conditions. We also expect a physical health Contextualizer, PCT, to be delivered within the next 30 days and I believe that these Contextualizers coupled with the Reference Database will provide highly-advanced mental and physical health diagnostic tools for professionals and mHealth consumers alike."

MedX also reports that it has instructed legal counsel to initiate a name change to "nDatalyze Corp." to more accurately reflect the Corporation's future direction.

nDatalyze Corp. will focus on specialized database development and machine-learning applications. A new website is under development and expected to launch in the near future.

ABOUT MEDXTRACTOR CORP:

The Corporation is a Calgary-based company that generates technologically-based solutions. The SHAMAN division is focusing on applying machine learning to predict potential benefits associated with the use of psychedelic drugs within the mental health sector and the YMI division is developing a data-driven consumer mHealth application. With installations all over the world, its legacy craft-scale bio-extractors are used to extract compounds from a variety of botanical materials. Readers are advised that both SHAMAN and the YMI mHealth application require further development and accordingly the Corporation is not currently making any express or implied claims that the applications can, or will be able to, generate accurate results or profits.
