

Sekur Private Data Ltd. Launches Sekur in Local Currencies in Preparation for Global Sales – Enables Consumers and SMBs to Buy Sekur in Local Currencies in North America, Europe, Asia, Australasia

TORONTO, ON and NEW YORK, NY / July 20, 2022 / Sekur Private Data Ltd. (OTCQX:SWISF)(CSE:SKUR)(FRA:GDT0) ("Sekur" or the "Company"), the leader in Swiss hosted secure communications and secure data management, is pleased announce that it has launched its [Sekur](#) solutions in several local currencies in North America, Europe, Asia and Australasia.

The Company is pleased to announce that as of July 20th, 2022, customers worldwide will be able to purchase any Sekur solution in the following currencies: USD, CAD, CHF, EUR, GBP, AUS, NZD and SGD. These currencies cover customers in 4 continents, with the rest of the countries still able to purchase in USD. The currencies are displayed depending on the IP address accessing the [Sekur](#) website. As an example, if a customer in Singapore accesses the site, the pricing will be displayed in Singapore Dollars. Eurozone countries using the Euro will have the same benefit with the price being in EUR. Customers in the 20 countries Eurozone, Switzerland, the United Kingdom, Australia, New Zealand, Singapore, Canada and the USA are now able to buy Sekur in their local currency. This saves customers additional currency exchange fees often charged by banks and credit card companies.

The Company is preparing a global launch of its [Sekur](#) privacy and security communications solutions. On July 13 2022, it announced in a [News Release](#) that it has expanded its "Chat-by-Invites" on SMS in 23 countries, covering 1.18 billion people. As part of this preparation, the Company believes that offering subscriptions in local currencies, will facilitate and increase subscription signups.

Alain Ghiai, CEO of Sekur Private Data said: "We are excited to be able to offer local currency pricing to our customers in over 35 countries. With the expansion of our proprietary "Chats-by-Invites" feature on SekurMessenger, we are now ready to launch our solutions globally through our digital marketing campaigns we have planned by the fall of 2022. As we are not connected to any Big Tech platform, we can offer a truly independent, private and secure means of communications without any data mining, through our proprietary technology and our secure servers based in Switzerland. We look forward to continue to offer true data privacy to all individuals and their businesses and protect their intellectual property, and their privacy, from data miners and malicious hackers."

Sekur, which includes [SekurMessenger](#) and [SekurMail](#), is part of a bundle of email, messaging and file transfer into one application, includes the Company's latest SekurMail technology, which includes proprietary anti-phishing and privacy feature called SekurSend®. SekurSend® lets a user send an email to any other recipient, whether they have [Sekur](#) or not, in full privacy and security as the email never leaves [Sekur](#)'s encrypted email servers based in Switzerland. The recipient can then click on the notification and reply in the same manner using SekurReply®, without the recipient having to register for a [Sekur](#) account. The sender can also decide to protect

any email sent by adding a password to open it, a read-limit and a self-destruct timer as well. Sending an email with the SekurSend® feature allows the senders and recipients to add limitless size attachments to the emails without crowding the recipients' email box. This also eliminates BEC attacks for businesses and email phishing attacks. Additionally, SekurMail includes full control of email delivery, automatic data export for large Enterprises and an automatic Data Loss Prevention technology ("DLP") with real time continuous archiving.

Recent data breaches in messaging applications have created a certain urgency for businesses and data privacy advocates to protect their communications from cyber-attacks and identity theft via mobile and desktop devices.

[SekurMessenger](#) now comes with a proprietary feature and technology called "Chat-By-Invites". This feature allows a [SekurMessenger](#) user ("SM user") invite a non-SM user, or a group of non-SM users, to chat in a fully private and secure way, without the recipient ever having to register to [SekurMessenger](#) or download the app. At the end of the chat, the initiator of the conversation can remotely terminate the conversation and all traces of the conversation are deleted from all users, including the recipient. This unique feature is now fully deployed and functional on all iOS and Android devices and web platforms. The target sectors are numerous, including but not limited to real estate, legal, finance, insurance, medical, government, energy, manufacturing, trade and pharmaceutical sectors.

[SekurMessenger](#) also eliminates many of the privacy and security risks by not only not requiring a phone number, which would divulge a user's phone device ID, but also by not social engineering a user's phone or computer contact list and infecting the contacts by default as well, eliminating a huge loophole in security and privacy. [SekurMessenger](#) issues each user a username and a Sekur number. The Sekur number is the contact ID a user would disclose in order for other Sekur users to be added. The service comes with a self-destruct timer and other features as well, including Sekur's proprietary VirtualVaults and HeliX technologies with all data stored in Swiss hosted encrypted servers.

Sekur's Data privacy solutions are all hosted in Switzerland, protecting users' data from any outside data intrusion requests. In Switzerland, the right to privacy is guaranteed in article 13 of the Swiss Federal Constitution. The Federal Act on Data Protection ("FADP") of 19 June 1992 (in force since 1993) has set up a strict protection of privacy by prohibiting virtually any processing of personal data which is not expressly authorized by the data subjects. The protection is subject to the authority of the Federal Data Protection and Information Commissioner.

Under Swiss federal law, it is a crime to publish information based on leaked "secret official discussions." In 2010 the Federal Supreme Court of Switzerland found that IP addresses are personal information and that under Swiss privacy laws they may not be used to track Internet usage without the knowledge of the individuals involved.

About Sekur Private Data Ltd.

Sekur Private Data Ltd. is a Cybersecurity and Internet privacy provider of Swiss hosted solutions for secure communications and secure data management. The Company distributes a

suite of encrypted e-mails, secure messengers, secure communication tools, and secure cloud-based storage, disaster recovery and document management.
