

## **Sekur Private Data Surpasses 2022 Users Target - Sees No Recession in Sight for its Sekur Privacy Communications Solutions**

**TORONTO, ON and NEW YORK, NY / ACCESSWIRE / September 26, 2022 /** Sekur Private Data Ltd. (OTCQX: SWISF) (CSE: SKUR) (FRA: GDT0) ("Sekur" or the "Company"), the leader in Swiss hosted secure communications and secure data management, is pleased announce that is has surpassed its paid users target for 2022, as indicated in the [FRC Fundamental Research Report dated Sept 2022](#).

The Company is continuing to push its consumer sales, as it is experiencing strong momentum in sales and is working on its SMB and Enterprise users' targets, with its SEO and targeted marketing strategy, starting Q1 2023. Sekur also plans to launch several solutions in Q4 2022 and all of 2023, such as SekurShare, SekurPassword, SekurVPN, SekurVoice and SekurPro. These solutions are planned for consumers, SMBs, enterprises and governmental organizations, and are expected to increase the Company's sales and ARPU (Average Revenue Per User).

Alain Ghiai, CEO of Sekur Private Data said: "We are excited have exceeded our paid users' target for 2022. Despite recessionary talks, we have seen a robust growth in our users' base and our sales and expect this growth to continue. People will need privacy and security and send emails, even during recessions. We continue to expand Sekur into the enterprise sector with new features such as mass onboarding and archiving features. Our company is getting recognition and we feel the momentum becoming stronger every quarter. As we are not connected to any Big Tech platform, we can offer a truly independent, private and secure means of communications without any data mining or location mining, through our proprietary technology and our secure servers based in Switzerland. We look forward in continuing to offer true data privacy to all individuals and their businesses and protect their intellectual property, and their privacy, from data miners and malicious hackers."

[SekurMessenger](#) also comes with a proprietary feature and technology called "Chat-By-Invite". This feature allows a [SekurMessenger](#) user ("SM user") invite a non-SM user, or a group of non-SM users, to chat in a fully private and secure way, without the recipient ever having to register to [SekurMessenger](#) or download the app. At the end of the chat, the initiator of the conversation can remotely terminate the conversation and all traces of the conversation are deleted from all users, including the recipient. This unique feature is now fully deployed and functional on all iOS and Android devices and web platforms. The target sectors are numerous, including but not limited to real estate, legal, finance, insurance, medical, government, energy, manufacturing, trade and pharmaceutical sectors.

The invite can be sent via Email or SMS. As of now, Sekur has enabled invites in 61 countries, and will add more countries as [Sekur](#) expands globally. The countries activated currently are:

Argentina, Australia, Austria, Bahrain, Belgium, Brazil, Canada, Chile, Colombia, Costa Rica, Croatia, Cyprus, Csech Republic, Denmark, Dominican Republic, El Salvador, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Ireland, Italy, Japan, Kuwait, Lichtenstein, Luxembourg, Malaysia, Malta, Mexico, Monaco, Netherlands, New Zealand, Nicaragua, Norway, Oman, Panama, Peru, Poland, Portugal, Qatar, Romania, Saudi

Arabia, Serbia, Singapore, Slovakia, Spain, Sri Lanka, Sweden, Switzerland, Taiwan, United Arab Emirates, United Kingdom, United States of America, and Vatican City.

[SekurMessenger](#) also eliminates many of the privacy and security risks by not only not requiring a phone number, which would divulge a user's phone device ID, but also by not social engineering a user's phone or computer contact list and infecting the contacts by default as well, eliminating a huge loophole in security and privacy. [SekurMessenger](#) issues each user a username and a Sekur number. The Sekur number is the contact ID a user would disclose in order for other Sekur users to be added. The service comes with a self-destruct timer and other features as well, including Sekur's proprietary VirtualVaults and HeliX technologies with all data stored in Swiss hosted encrypted servers.

Sekur, which includes [SekurMessenger](#) and [SekurMail](#), is part of a bundle of email, messaging and file transfer into one application, includes the Company's latest SekurMail technology, which includes proprietary anti-phishing and privacy feature called SekurSend®. SekurSend® lets a user send an email to any other recipient, whether they have [Sekur](#) or not, in full privacy and security as the email never leaves [Sekur](#)'s encrypted email servers based in Switzerland. The recipient can then click on the notification and reply in the same manner using SekurReply®, without the recipient having to register for a [Sekur](#) account. The sender can also decide to protect any email sent by adding a password to open it, a read-limit and a self-destruct timer as well. Sending an email with the SekurSend® feature allows the senders and recipients to add limitless size attachments to the emails without crowding the recipients' email box. This also eliminates BEC attacks for businesses and email phishing attacks. Additionally, SekurMail includes full control of email delivery, automatic data export for large Enterprises and an automatic Data Loss Prevention technology ("DLP") with real time continuous archiving.

Recent data breaches in messaging applications have created a certain urgency for businesses and data privacy advocates to protect their communications from cyber-attacks and identity theft via mobile and desktop devices.

Sekur's Data privacy solutions are all hosted in Switzerland, protecting users' data from any outside data intrusion requests. In Switzerland, the right to privacy is guaranteed in article 13 of the Swiss Federal Constitution. The Federal Act on Data Protection ("FADP") of 19 June 1992 (in force since 1993) has set up a strict protection of privacy by prohibiting virtually any processing of personal data which is not expressly authorized by the data subjects. The protection is subject to the authority of the Federal Data Protection and Information Commissioner.

Under Swiss federal law, it is a crime to publish information based on leaked "secret official discussions." In 2010 the Federal Supreme Court of Switzerland found that IP addresses are personal information and that under Swiss privacy laws they may not be used to track Internet usage without the knowledge of the individuals involved.
