

Sekur Private Data Ltd. Launches Pre-Registration Site for SekurVPN – Offer 60% Yearly Discount to First 5000 Subscribers

March 7, 2023 – Toronto, ON, and New York, NY, Sekur Private Data Ltd. (CSE:SKUR) (OTCQX:SWISF) (FRA:GDT0) (“Sekur” or the “Company”), a leading Swiss hosted secure and private communications platform, is pleased announce that it has launched an early registration website for its non-big tech, Swiss hosted private VPN solution, SekurVPN.

The Company has launched the website www.sekurvpn.com in order to take pre-registrations for SekurVPN. SekurVPN is planned to be priced at US\$ 7/month/user and US\$ 70/year/user for the service. However, a special launch price of US\$ 28/year for the first 2 years will be offered to the first 5,000 people registering to the service. This represents a 60% to the yearly price, which already offers 2 months free usage.

The official launch of SekurVPN is set to be April 7, 2023 and the Company plans to offer the pre-registration discount to all its existing [Sekur](#) users and all its shareholders.

SekurVPN is meant for privacy enthusiasts and users wanting to mask their IP address from hackers. An example would be users going to their e-banking or shopping online, using their emails, and wanting to have full privacy and protection from hackers hijacking their location and signal. The service is not meant for streaming media such as on demand or e-gaming, although it is perfectly fine for watching YouTube videos according to internal testing. The Company will guarantee proper speed high encryption for normal privacy usage and regular email and web surfing.

Alain Ghiai, CEO of Sekur Private Data said: "We are very excited to announce this pre-registration opportunity for our users and shareholders and anyone wishing to have true privacy on the internet, at a 60% discount to our already very affordable pricing model. The launch of SekurVPN is set for April 7, 2023. We have high hopes for the success of SekurVPN, due to its highly private nature, since it does not use any big tech or computing or hosting and offers only Swiss IPs. Our prime directive is to provide private and secure communications for everyone, and, as we are not connected to any Big Tech or Hyperscaler platform, we offer a truly independent, private and secure means of communications without any data mining, through our proprietary technology and our secure servers based in Switzerland. We look forward to continuing to offer true data privacy to all individuals and their businesses and protect their intellectual property, and their privacy, from data miners and malicious hackers."

Sekur, which includes [SekurMessenger](#) and [SekurMail](#), is part of a bundle of email, messaging and file transfer into one application, includes the Company's latest SekurMail technology, which includes proprietary anti-phishing and privacy feature called SekurSend®. SekurSend®

lets a user send an email to any other recipient, whether they have [Sekur](#) or not, in full privacy and security as the email never leaves [Sekur](#)'s encrypted email servers based in Switzerland. The recipient can then click on the notification and reply in the same manner using [SekurReply@](#), without the recipient having to register for a [Sekur](#) account. The sender can also decide to protect any email sent by adding a password to open it, a read-limit and a self-destruct timer as well. Sending an email with the [SekurSend@](#) feature allows the senders and recipients to add limitless size attachments to the emails without crowding the recipients' email box. This also eliminates BEC attacks for businesses and email phishing attacks. Additionally, [SekurMail](#) includes full control of email delivery, automatic data export for large Enterprises and an automatic Data Loss Prevention technology ("DLP") with real time continuous archiving.

Recent data breaches in messaging applications have created a certain urgency for businesses and data privacy advocates to protect their communications from cyber-attacks and identity theft via mobile and desktop devices.

[SekurMessenger](#) now comes with a proprietary feature and technology called "Chat-By-Invites". This feature allows a [SekurMessenger](#) user ("SM user") invite a non-SM user, or a group of non-SM users, to chat in a fully private and secure way, without the recipient ever having to register to [SekurMessenger](#) or download the app. At the end of the chat, the initiator of the conversation can remotely terminate the conversation and all traces of the conversation are deleted from all users, including the recipient. This unique feature is now fully deployed and functional on all iOS and Android devices and web platforms. The target sectors are numerous, including but not limited to real estate, legal, finance, insurance, medical, government, energy, manufacturing, trade and pharmaceutical sectors.

[SekurMessenger](#) also eliminates many of the privacy and security risks by not only not requiring a phone number, which would divulge a user's phone device ID, but also by not social engineering a user's phone or computer contact list and infecting the contacts by default as well, eliminating a huge loophole in security and privacy. [SekurMessenger](#) issues each user a username and a Sekur number. The Sekur number is the contact ID a user would disclose in order for other Sekur users to be added. The service comes with a self-destruct timer and other features as well, including Sekur's proprietary VirtualVaults and HeliX technologies with all data stored in Swiss hosted encrypted servers.

Sekur's Data privacy solutions are all hosted in Switzerland, protecting users' data from any outside data intrusion requests. In Switzerland, the right to privacy is guaranteed in article 13 of the Swiss Federal Constitution. The Federal Act on Data Protection ("FADP") of 19 June 1992 (in force since 1993) has set up a strict protection of privacy by prohibiting virtually any processing of personal data which is not expressly authorized by the data subjects. The protection is subject to the authority of the Federal Data Protection and Information Commissioner.

Under Swiss federal law, it is a crime to publish information based on leaked "secret official discussions." In 2010 the Federal Supreme Court of Switzerland found that IP addresses are

personal information and that under Swiss privacy laws they may not be used to track Internet usage without the knowledge of the individuals involved.

About Sekur Private Data Ltd.

Sekur Private Data Ltd. is a Cybersecurity and Internet privacy provider of Swiss hosted solutions for secure and private communications.
