

Sekur Private Data Ltd. on Track to Launch Sekur Enterprise in January - First Telecom Operator in Latin America to Start Sales in Q1 2024

Financial institutions in line to be first institutional customers in Latin America and the USA - eliminating use of WhatsApp and other Big Tech messaging applications

Sekur Enterprise to protect senior employees and government officials against Business Email Compromise ("BEC") attacks

Toronto, Ontario and New York, New York--(Newsfile Corp. - December 12, 2023) - [Sekur Private Data Ltd.](#) (CSE: SKUR) (OTCQB: SWISF) (FSE: GDT0) ("Sekur" or the "Company"), a leading Swiss hosted secure and private communications platform, is pleased to announce that it is on track to launch its [Sekur Enterprise](#) suite of privacy communications solutions starting mid-January 2024. Several of Sekur's customers are waiting for Sekur Enterprise in Latin America, the USA and the Middle East Gulf countries.

Several existing distributors are ready to launch Sekur Enterprise. In Latin America, America Movil's Telcel is ready to launch SekurMessenger for Enterprise as it has several financial institutions and other large enterprises ready to adopt the solution right away, as WhatsApp has recently been banned by most financial and government institutions. SekurMessenger for Enterprise has several features to control communications between employees and maintain tight control of information flow for compliance purposes, security and privacy. The innovative SekurRelay solution is also of interest for all enterprise customers in the region and will be proposed in Q1 2024 to America Movil and other telecom operators in other global regions, in parallel to SekurMessenger for Enterprise. Sekur already sells SekurMessenger to Telcel, the leading mobile operator in Mexico, a division of America Movil, and the enterprise version is expected to replace the business solution in February 2024. [Sekur](#) has recently signed several distribution agreements in Jordan and Qatar and is in talks with another distributor in the United Arab Emirates. Its distributors are already discussing with the leading telecom operators the benefits of Sekur Enterprise and Sekur Business solutions for their SMB and Enterprise customers.

Alain Ghiai, CEO of Sekur Private Data, said: "We are excited to launch our anticipated Sekur Enterprise solutions globally. The first phase has already been launched with our SekurRelay feature for all SekurMail Enterprise accounts, the second phase will launch mid-January with expanded features for SekurMessenger, and the last phases will be launched by mid-March with the rest of the privacy and security features our enterprise clients are expecting. Sekur Enterprise is important, as it answers the demands of our existing clients and will propel the company to a new level by being able to offer our solutions to all enterprise level clients worldwide. Additionally, it will increase the average revenue per user ("ARPU") by up to 280% to a bundled amount value of US\$47/month from a bundled value of US\$17/month. Additional features such as SekurVoice and video solutions will increase ARPU even more. We are happy to be able to provide these new enterprise solutions to all our existing and new customers worldwide, as we can offer the only Swiss-hosted, proprietary, private and secure communications platform that does not rely on big tech infrastructure, open-source coding or data mining, therefore reducing exponentially the risk of cyber penetration. Our prime directive is to provide private and secure communications for everyone, and as we are not connected to any Big Tech platform, we offer a truly independent, private and secure means of communications, without any data mining, through our proprietary technology and our secure servers based in Switzerland."

Sekur recently [announced](#) the launch of its [SekurRelay Enterprise Email](#) Solution, part of its Sekur Enterprise solution, allowing corporate executives and management to "split" their company email

domain in two, benefiting from SekurMail's SekurSend/SekurReply feature and other Swiss-hosted privacy and security solutions SekurMail offers, without having to migrate the entire company employees, eliminating a huge roadblock to mass adoption of SekurMail by large corporations and government agencies.

SekurRelay lets a company employee easily migrate their existing business email to [Sekur](#)'s privacy and security email platform, and "split" from the company's existing email hosting provider seamlessly, while maintaining the same business email domain as the rest of the employees. This eliminates the need for enterprise IT departments to migrate their entire staff to Sekur, to have the same domain email address. SekurRelay lets company staff, as an example, use their existing provider and email @company.com, while having their executives or managers use [SekurMail](#), keeping their existing email address @company.com. This "Inbound Relay" solves a large problem, as many larger enterprises have been hesitant to migrate thousands of employee emails due to the cumbersome and costly nature of doing so. With SekurRelay, companies of all sizes can protect C-level and management level emails from [Business Email Compromise \("BEC"\)](#) attacks, while letting the rest of the employees stay in their existing email hosting providers. At the same time, all employee emails will be "filtered" through SekurRelay, and benefit from Sekur's malware detection and spam filter, giving an extra advantage for all employees, whether they use SekurRelay or not, while only SekurRelay accounts holders will be hosted and have their emails delivered by Sekur.

Enterprises and some government upper-level employees and executives have been looking for a way to use [Sekur](#)'s privacy and security tools without having to migrate the entire company to Sekur's email platform, due to costs associated with migration of thousands of emails. The goal is to get away from the main email platform providers that are being compromised with BEC attacks that are targeting upper management and C-level executives. Sekur is now able to eliminate these roadblocks and offer true protection against data mining, email phishing and BEC attacks to anyone subscribing to a business or enterprise email account, without having to migrate the entire company.

SekurRelay comes automatically with all Sekur Enterprise email accounts at a price of US\$25/month or US\$275/year with a minimum of 20 users per Enterprise account, with each SekurMail account offered with 250GB of redundant storage, up from 100GB of storage for SMB users. [SekurMail](#) also offers in all its email accounts a unique SekurSend/SekurReply feature, allowing Sekur users to send emails to any non Sekur users in full privacy and security, with unlimited attachments capability, protecting the email from BEC attacks. In 2021 alone there were [20,000 BEC](#) attacks reported to the FBI in the USA.

This new solution will make sales to businesses of larger sizes, enterprises and government organizations easier, as it does not disrupt their existing IT infrastructure and planning and has no migration cost associated with it.

Sekur also believes that by adding its Swiss-hosted [SekurVPN](#) solution to its other solutions, it increases internet connection encryption of users and protects their identity from malicious hackers. Since the Company has added SekurVPN and customized "à la carte" bundles for consumers and businesses, approximately 50% of all customers have been buying bundles with approximately 60% of customers purchasing SekurVPN in the bundle or on its own.

On April 7, 2023, the Company launched SekurVPN, its privacy VPN solution available through [Sekur.com](#), and began commercial sales of its highly anticipated privacy and security VPN solution. The solution is also offered for sale in USD, CAD, NZD, AUD, SGD, CHF, EUR and GBP. Sekur plans to do a full scale launch before year-end 2023 with several videos on social media promoting SekurVPN to select targeted audiences in the U.S. Ghiai discusses the advantages of having a privacy VPN, and other preventive measures to minimize cyberattacks for consumers and businesses, on [Sekur Hack of the Week Episode](#), a nationwide TV show broadcast on Bloomberg TV, Fox Business TV and on streaming media.

SekurVPN is especially meant for privacy enthusiasts and users wanting to protect their identity from hackers. An example would be users going to their e-banking or shopping online, using their emails,

using messaging applications and wanting to have full privacy and protection from hackers hijacking their IP location and signal. The service guarantees not to use Big Tech or hyperscalers for its functioning or hosting, and it guarantees that there are no third party bundles sold with it so no data is leaked or sold to third parties. It guarantees no traffic pulling or monitoring and no phone number is required to register to the service.

According to a [Forbes article](#), 66% of surveyed internet users within the U.S. use a VPN to help protect personal data, 80% use a VPN for increased security and 33% use a VPN to mask their internet activity. More statistics can be found on this [VPN Statistics And Trends In 2023](#) article.

Private:

[SekurVPN](#) uses its own proprietary infrastructure and does not use any hyperscaler or Big Tech hosting providers, unlike most other VPNs. SekurVPN offers Swiss IPs only. This guarantees that it is using only SekurVPN's own servers and routing. Other VPNs offer hundreds of locations and are using Big Tech providers, compromising users' privacy. SekurVPN never monitors users' activity and never shares any data with third party service providers. By being a pure VPN, without bundled outside services such as antivirus and ad blockers, SekurVPN keeps users' information private without sharing their data with third party service providers. With SekurVPN, users do not register their phone number on the app or the web, rendering users invisible from hackers or snoopers. No phone number to register, anonymous Swiss IPs only, no data mining or traffic sharing with anyone.

Secure:

SekurVPN's secure VPN routes all your internet traffic through SekurVPN's privately owned servers, in multiple locations in Switzerland only, using the highest encryption industry standards combined with its proprietary HeliX technology for added security. Encryption keys are not stored on devices and are unique at every connection. Users' passwords, confidential data and internet surfing stay encrypted even over public untrusted internet connections.

Easy to use:

SekurVPN is extremely easy to setup and deploy. There is no country list and our interface is simplified; just tap or click the connection button. SekurVPN's no-frills but highly secure and private service gives users peace of mind without thinking about geolocations.

Currently SekurVPN is available to use with MacOS, iOS and Android devices. Versions for Windows 64, Windows 32 and Linux are planned to be launched in the coming weeks.

In addition to [SekurVPN](#), the company offers a bundled Sekur plan, which includes [SekurMessenger](#) and [SekurMail](#) as a bundle of email, messaging and file transfer into one application, and includes the Company's latest SekurMail technology, which includes a proprietary anti-phishing and privacy feature called SekurSend®. SekurSend® lets a user send an email to any other recipient, whether they have [Sekur](#) or not, in full privacy and security as the email never leaves [Sekur](#)'s encrypted email servers based in Switzerland. The recipient can then click on the notification and reply in the same manner using SekurReply®, without the recipient having to register for a [Sekur](#) account. The sender can also decide to protect any email sent by adding a password to open it, a read-limit and a self-destruct timer as well. Sending an email with the SekurSend® feature allows the senders and recipients to add limitless size attachments to the emails without crowding the recipients' email box. This also eliminates BEC attacks for businesses and email phishing attacks. Additionally, SekurMail includes full control of email delivery, automatic data export for large enterprises and an automatic Data Loss Prevention technology ("DLP") with real time continuous archiving.

Recent data breaches in messaging applications have created a certain urgency for businesses and data privacy advocates to protect their communications from cyberattacks and identity theft via mobile and desktop devices.

[SekurMessenger](#) comes with a proprietary feature and technology called "Chat-By-Invite." This feature allows a [SekurMessenger](#) user ("SM user") to invite via email or SMS a non-SM user, or a group of non-SM users, to chat in a fully private and secure way without the recipient ever having to register to [SekurMessenger](#) or download the app. At the end of the chat, the initiator of the conversation can remotely terminate the conversation and all traces of the conversation are deleted from all users, including the recipient. This unique feature is now fully deployed and functional on all iOS and Android devices and web platforms. The target sectors are numerous, including but not limited to real estate, legal, finance, insurance, medical, government, energy, manufacturing, trade and pharmaceutical sectors.

[SekurMessenger](#) also eliminates many of the privacy and security risks by not requiring a phone number, which would divulge a user's phone device ID, but also by not social engineering a user's phone or computer contact list and infecting the contacts by default as well, eliminating a huge loophole in security and privacy. [SekurMessenger](#) issues each user a username and a Sekur number. The Sekur number is the contact ID a user would disclose in order for other Sekur users to be added. The service comes with a self-destruct timer and other features as well, including Sekur's proprietary VirtualVaults and HeliX technologies with all data stored in Swiss hosted encrypted servers.

Sekur's Data privacy solutions are all hosted in Switzerland, protecting users' data from any outside data intrusion requests. In Switzerland, the right to privacy is guaranteed in article 13 of the Swiss Federal Constitution. The Federal Act on Data Protection ("FADP") of 19 June 1992 (in force since 1993) has set up a strict protection of privacy by prohibiting virtually any processing of personal data which is not expressly authorized by the data subjects. The protection is subject to the authority of the Federal Data Protection and Information Commissioner.

Under Swiss federal law, it is a crime to publish information based on leaked "secret official discussions." In 2010, the Federal Supreme Court of Switzerland found that IP addresses are personal information and that under Swiss privacy laws they may not be used to track internet usage without the knowledge of the individuals involved.

About Sekur Private Data Ltd.

Sekur Private Data Ltd. is a cybersecurity and Internet privacy provider of Swiss hosted solutions for secure and private communications. The Company distributes a suite of encrypted e-mails, secure messengers and secure communication tools. Sekur Private Data Ltd. sells its products through its own website, <https://www.sekur.com>, approved distributors and telecommunications companies worldwide. Sekur Private Data Ltd. serves consumers, businesses and governments worldwide.
