Dear Sir:

**Re: Trillion Energy International Inc.  
Prospective Resources Evaluation  
Effective October 31, 2021**

GLJ Ltd. (GLJ) has completed an independent prospective resources assessment and evaluation of the exploration gas prospects of Trillion Energy International Inc. (the "Company") located in the South Akcakoca Sub-Basin property, offshore Turkey. The effective date of this evaluation is October 31, 2021.

This report has been prepared for the Company for corporate purposes including planning and financing. This evaluation has been prepared in accordance with resources definitions, standards and procedures contained in the Canadian Oil and Gas Evaluation Handbook.

All values reported herein are in U.S. dollars.

It is trusted that this evaluation meets your current requirements. Should you have any questions regarding this analysis, please contact the undersigned.

Yours truly,

**GLJ LTD.**

## INTRODUCTION

GLJ Ltd. (GLJ) was commissioned by Trillion Energy International Inc. (Trillion) to prepare an independent evaluation of prospective gas resources for exploration prospects located in the South Akcakoca Sub-Basin (SASB) Gas Field. The SASB Gas Field is located in the shallow water of the Black Sea in Turkey. Trillion holds a 49 percent working interest in the Field which is shown on Map 1.

The SASB Gas Field is an offshore development consisting of four platforms and 23 wells. Currently, there are five gas wells producing from the Eocene Kusuri Sandstones. There are eight productive intervals that have been exploited in the SASB Gas Field, they are the: AA, A, B, C, D, DE, E and F sands.

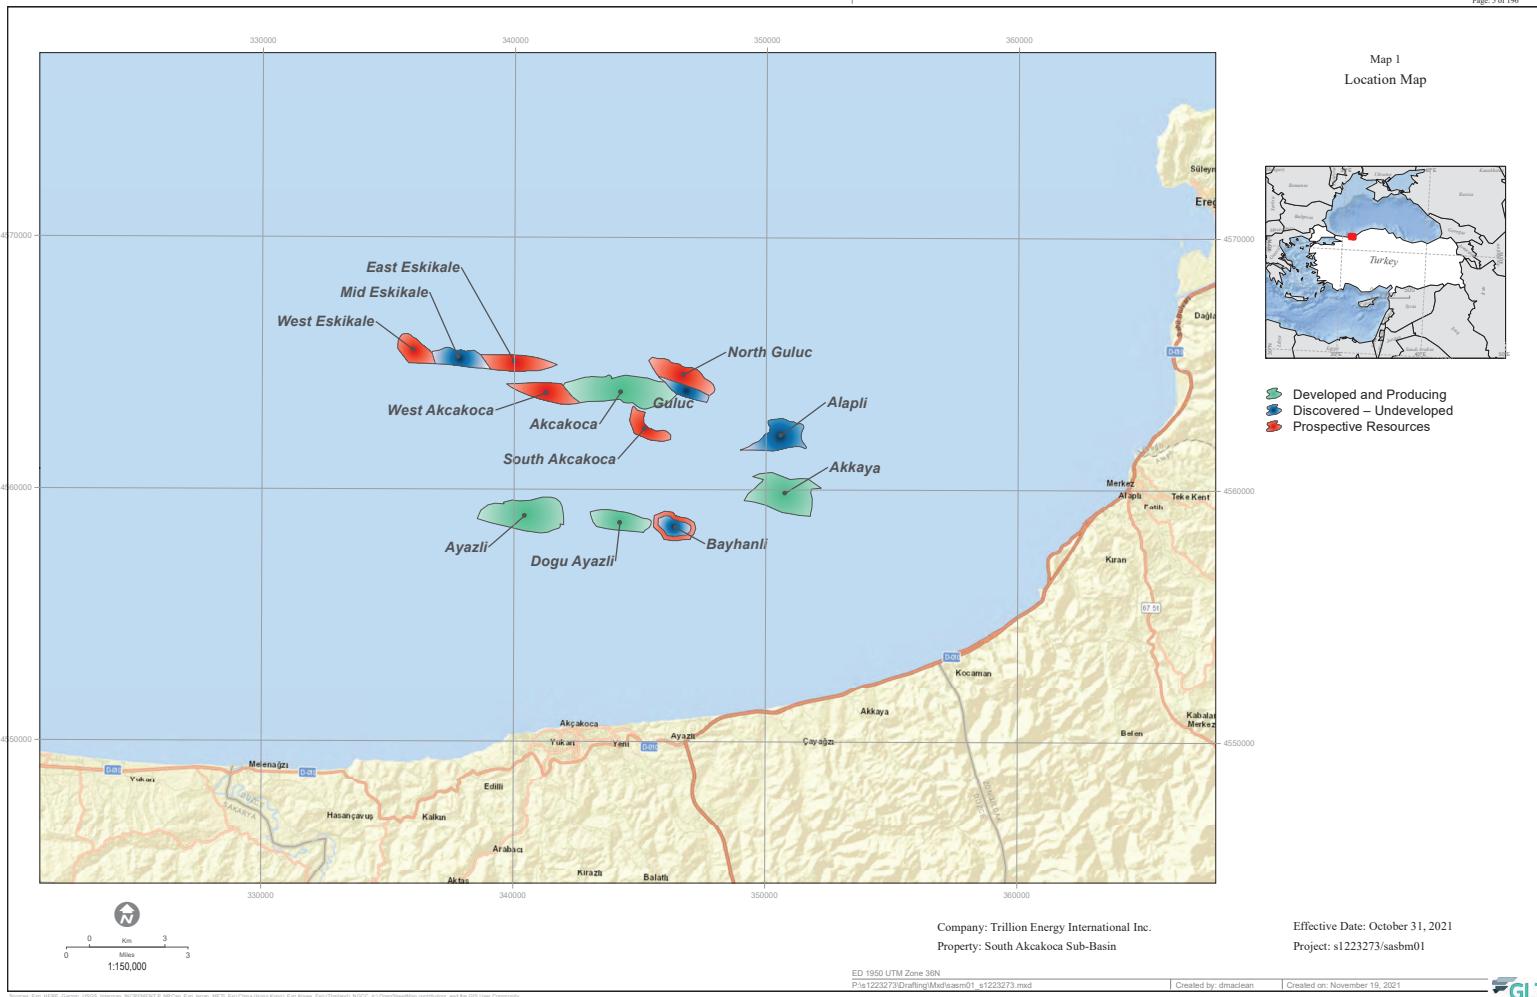

This evaluation focuses on the assessment of the prospective intervals already producing in discovered accumulations in the SASB Gas Field for the following exploration prospects: Akcakoca South, Akcakoca-6, Bayhanli, Eskikale East, Eskikale West and Guluc North.

This resources evaluation was initiated and completed in November 2021. Estimates of resources were generally prepared using land, seismic, geological and well information from the Company to approximately October 31, 2021. The Company has confirmed that, to the best of its knowledge, all information provided to GLJ is correct and complete as of the effective date.

This resources evaluation has been prepared in accordance with procedures and standards contained in the Canadian Oil and Gas Evaluation (COGE) Handbook. The resources definitions used in preparing this report (included herein under “Resources and Reserves Definitions”) are those contained in the COGE Handbook and the Canadian Securities Administrators National Instrument 51-101 (NI 51-101).

The evaluation was conducted on the basis of the GLJ (2021-10) Price Forecast which is summarized in the Product Price and Market Forecasts section of this report.

A table summarizing resources estimates for various resources categories is provided in the Summary section of this report. The property reports, attached hereto, provide additional details.

## RESOURCES AND RESERVES DEFINITIONS

GLJ has prepared estimates of resources and reserves in accordance with the standards contained in the Canadian Oil and Gas Evaluation (COGE) Handbook. The following are excerpts from the definitions of resources and reserves, contained in Section 1.3 of the COGE Handbook, which is referenced by the Canadian Securities Administrators in “National Instrument 51-101 Standards of Disclosure for Oil and Gas Activities”.

### A. Fundamental Resources Definitions

**Total Petroleum Initially-In-Place (PIIP)** is that quantity of petroleum that is estimated to exist originally in naturally occurring accumulations. It includes that quantity of petroleum that is estimated, as of a given date, to be contained in known accumulations, prior to production, plus those estimated quantities in accumulations yet to be discovered (equivalent to “total resources”).

**Discovered Petroleum Initially-In-Place** (equivalent to discovered resources) is that quantity of petroleum that is estimated, as of a given date, to be contained in known accumulations prior to production. The recoverable portion of discovered petroleum initially in place includes production, reserves, and contingent resources; the remainder is unrecoverable.

**Reserves** are estimated remaining quantities of oil and natural gas and related substances anticipated to be recoverable from known accumulations, as of a given date, based on the analysis of drilling, geological, geophysical, and engineering data; the use of established technology; and specified economic conditions, which are generally accepted as being reasonable. Reserves are further classified according to the level of certainty associated with the estimates and may be subclassified based on development and production status. *[Reserves are further defined below].*

**Contingent Resources** are those quantities of petroleum estimated, as of a given date, to be potentially recoverable from known accumulations using established technology or technology under development, but which are not currently considered to be commercially recoverable due to one or more contingencies. Contingencies may include factors such as economic, legal, environmental, political, and regulatory matters, or a lack of markets. It is also appropriate to classify as contingent resources the estimated discovered recoverable quantities associated with a project in the early evaluation stage. Contingent Resources are further classified in accordance with the level of certainty associated with the estimates and may be subclassified based on project maturity and/or characterized by their economic status.

**Undiscovered Petroleum Initially-In-Place** (equivalent to undiscovered resources) is that quantity of petroleum that is estimated, on a given date, to be contained in accumulations yet to be discovered. The recoverable portion of undiscovered petroleum initially in place is referred to as “prospective resources,” the remainder as “unrecoverable.”

**Prospective Resources** are those quantities of petroleum estimated, as of a given date, to be potentially recoverable from undiscovered accumulations by application of future development projects. Prospective resources have both an associated chance of discovery and a chance of development. Prospective Resources are further subdivided in accordance with the level of certainty associated with recoverable estimates assuming their discovery and development and may be subclassified based on project maturity.

## B. Uncertainty Categories for Resources Estimates

The range of uncertainty of estimated recoverable volumes may be represented by either deterministic scenarios or by a probability distribution. Resources should be provided as low, best, and high estimates as follows:

**Low Estimate:** This is considered to be a conservative estimate of the quantity that will actually be recovered. It is likely that the actual remaining quantities recovered will exceed the low estimate. If probabilistic methods are used, there should be at least a 90 percent probability (P90) that the quantities actually recovered will equal or exceed the low estimate.

**Best Estimate:** This is considered to be the best estimate of the quantity that will actually be recovered. It is equally likely that the actual remaining quantities recovered will be greater or less than the best estimate. If probabilistic methods are used, there should be at least a 50 percent probability (P50) that the quantities actually recovered will equal or exceed the best estimate.

**High Estimate:** This is considered to be an optimistic estimate of the quantity that will actually be recovered. It is unlikely that the actual remaining quantities recovered will exceed the high estimate. If probabilistic methods are used, there should be at least a 10 percent probability (P10) that the quantities actually recovered will equal or exceed the high estimate.

This approach to describing uncertainty may be applied to reserves, contingent resources, and prospective resources. There may be significant risk that sub-commercial and undiscovered accumulations will not achieve commercial production. However, it is useful to consider and identify the range of potentially recoverable quantities independently of such risk.

## C. Reserves Categories

Reserves are estimated remaining quantities of oil and natural gas and related substances anticipated to be recoverable from known accumulations, as of a given date, based on:

- analysis of drilling, geological, geophysical, and engineering data;
- the use of established technology;
- specified economic conditions<sup>1</sup>, which are generally accepted as being reasonable, and shall be disclosed.

Reserves are categorized according to the degree of certainty associated with the estimates.

### **Proved Reserves**

Proved reserves are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves.

---

<sup>1</sup> For securities reporting, the key economic assumptions will be the prices and costs used in the estimate

. The required assumptions may vary by jurisdiction, for example:

(a) **forecast prices and costs**, in Canada under NI 51-101

(b) **constant prices and costs**, based on the average of the first day posted prices in each of the 12 months of the reporting issuer's financial year, under **US SEC rules** (this is optional disclosure under NI 51-101).

### ***Probable Reserves***

Probable reserves are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.

### ***Possible Reserves***

Possible reserves are those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the actual remaining quantities recovered will exceed the sum of the estimated proved plus probable plus possible reserves.

Other criteria that must also be met for the categorization of reserves are provided in Sections 1.3 and 1.4 of the COGE Handbook.

## **Development and Production Status**

Each of the reserves categories (proved, probable, and possible) may be divided into developed and undeveloped categories.

### ***Developed Reserves***

Developed reserves are those reserves that are expected to be recovered from existing wells and installed facilities or, if facilities have not been installed, that would involve a low expenditure (e.g., when compared to the cost of drilling a well) to put the reserves on production. The developed category may be subdivided into producing and non-producing.

#### ***Developed Producing Reserves***

Developed producing reserves are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty.

#### ***Developed Non-Producing Reserves***

Developed non-producing reserves are those reserves that either have not been on production, or have previously been on production, but are shut in, and the date of resumption of production is unknown.

#### ***Undeveloped Reserves***

Undeveloped reserves are those reserves expected to be recovered from known accumulations where a significant expenditure (for example, when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves category (proved, probable, possible) to which they are assigned.

In multi-well pools, it may be appropriate to allocate total pool reserves between the developed and undeveloped categories or to subdivide the developed reserves for the pool between developed producing and developed non-producing. This allocation should be based on the estimator's assessment as to the reserves that will be recovered from specific wells, facilities, and completion intervals in the pool and their respective development and production status.

## **D. Levels of Certainty for Reported Reserves**

The qualitative certainty levels referred to in the definitions above are applicable to individual reserves entities (which refers to the lowest level at which reserves calculations are performed) and to Reported Reserves (which refers to the highest level sum of individual entity estimates for which reserves estimates are presented). Reported Reserves should target the following levels of certainty under a specific set of economic conditions:

- at least a 90 percent probability that the quantities actually recovered will equal or exceed the estimated proved reserves;
- at least a 50 percent probability that the quantities actually recovered will equal or exceed the sum of the estimated proved plus probable reserves;
- at least a 10 percent probability that the quantities actually recovered will equal or exceed the sum of the estimated proved plus probable plus possible reserves.

A quantitative measure of the certainty levels pertaining to estimates prepared for the various reserves categories is desirable to provide a clearer understanding of the associated risks and uncertainties. However, the majority of reserves estimates are prepared using deterministic methods that do not provide a mathematically derived quantitative measure of probability. In principle, there should be no difference between estimates prepared using probabilistic or deterministic methods.

Additional clarification of certainty levels associated with *reserves* estimates and the effect of aggregation is provided in Section 5.7 of the COGE Handbook.

## **E. Discovered and Commercial Status and Risks Associated with Resources Estimates**

### **Discovery Status**

Total petroleum initially in place is first subdivided based on the discovery status of a petroleum accumulation. Discovered PIIP, production, reserves, and contingent resources are associated with known accumulations. Recognition as a known accumulation requires that the accumulation be penetrated by a well and have evidence of the existence of petroleum. COGEH Section 1.4.7, provides additional clarification regarding drilling and testing requirements relating to recognition of known accumulations.

### **Commercial Status**

Commercial status differentiates reserves from contingent resources. The following outlines the criteria that should be considered in determining commerciality:

- economic viability of the related development project;
- a reasonable expectation that there will be a market for the expected sales quantities of production required to justify development;
- evidence that the necessary production and transportation facilities are available or can be made available;
- evidence that legal, contractual, environmental, governmental, and other social and economic concerns will allow for the actual implementation of the recovery project being evaluated;
- a reasonable expectation that all required internal and external approvals will be forthcoming. Evidence of this may include items such as signed contracts, budget approvals, and approvals for expenditures, etc.;
- evidence to support a reasonable timetable for development. A reasonable time frame for the initiation of development depends on the specific circumstances and varies according to the scope of the project. While five years is recommended as a maximum time frame for classification of a project as commercial, a longer time frame could be applied where, for example, development of economic projects are deferred at the option of the producer for, among other things, market-related reasons or to meet contractual or strategic objectives.

### **Commercial Risk Applicable to Resources Estimates**

Estimates of recoverable quantities are stated in terms of the sales products derived from a development program, assuming commercial development. It must be recognized that reserves, contingent resources, and prospective resources involve different risks associated with achieving commerciality. The likelihood that a project will achieve commerciality is referred to as the "chance of commerciality." The chance of commerciality varies in different classes of recoverable resources as follows:

**Reserves:** To be classified as reserves, estimated recoverable quantities must be associated with a project(s) that has demonstrated commercial viability. Under the fiscal conditions applied in the estimation of reserves, the chance of commerciality is effectively 100 percent.

**Contingent Resources:** Not all technically feasible development plans will be commercial. The commercial viability of a development project is dependent on the forecast of fiscal conditions over the life of the project. For contingent resources the risk component relating to the likelihood that an accumulation will be commercially developed is referred to as the "chance of development." For contingent resources the chance of commerciality is equal to the chance of development.

**Prospective Resources:** Not all exploration projects will result in discoveries. The chance that an exploration project will result in the discovery of petroleum is referred to as the "chance of discovery." Thus, for an undiscovered accumulation the chance of commerciality is the product of two risk components — the chance of discovery and the chance of development.

### **F. Recovery Technology Status**

**Established Technology:** A recovery method that has been proven to be successful in commercial applications in the subject reservoir and is a prerequisite for assigning reserves.

**Technology Under Development:** A recovery process that has been determined to be technically viable via field test and is being field tested further to determine its economic viability in the subject reservoir. Contingent resources may be assigned if the project provides information that is sufficient and of a quality to meet the requirements for this resources class.

**Experimental Technology:** A technology that is being field tested to determine the technical viability of applying a recovery process to unrecoverable discovered petroleum initially-in-place in a subject reservoir. It cannot be used to assign any class of recoverable resources (i.e., reserves, contingent resources, prospective resources).

### **G. Economic Status of Resources Estimates**

By definition, reserves are commercially (and hence economically) recoverable. A portion of contingent resources may also be associated with projects that are economically viable but have not yet satisfied all requirements of commerciality. Accordingly, it may be a desirable option to sub-classify contingent resources by economic status:

**Economic Contingent Resources** are those contingent resources that are currently economically recoverable.

**Sub-Economic Contingent Resources** are those contingent resources that are not currently economically recoverable.

Where evaluations are incomplete such that it is premature to identify the economic viability of a project, it is acceptable to note that project economic status is “undetermined” (i.e., “contingent resources – economic status undetermined”).

In examining economic viability, the same fiscal conditions should be applied as in the estimation of reserves, i.e., specified economic conditions, which are generally accepted as being reasonable (refer to COGEH Section 1.3.7).

## H. Project Maturity Sub-Classes for Contingent Resources<sup>2</sup>

**Development Pending:** Where resolution of the final conditions for development is being actively pursued (high chance of development).

**Development On Hold:** Where there is a reasonable chance of development but there are major non-technical contingencies to be resolved that are usually beyond the control of the operator.

**Development Unclarified:** When the evaluation is incomplete and there is ongoing activity to resolve any risks or uncertainties.

**Development Not Viable:** Where no further data acquisition or evaluation is currently planned and hence there is a low chance of development.

---

<sup>2</sup>Based on PRMS Section 2.1.3.1 and Appendix A Glossary of Terms Used in Resources Evaluations and PRMS Applications Guidelines 2.7 (5).

**PRODUCT PRICE AND MARKET FORECASTS**  
**October 1, 2021**

GLJ has prepared its October 1, 2021 price and market forecasts as summarized in the attached Tables 1, 2 and 3 after a comprehensive review of information. Information sources include numerous government agencies, industry publications, Canadian oil refiners and natural gas marketers. The forecasts presented herein are based on an informed interpretation of currently available data. While these forecasts are considered reasonable at this time, users of these forecasts should understand the inherent high uncertainty in forecasting any commodity or market. These forecasts will be revised periodically as market, economic and political conditions change. These future revisions may be significant.

Gas produced in the South Akcakoca Sub-Basin property is directly sold to the state-owned crude oil and natural gas pipelines and trading company BOTAS Petroleum Pipeline Corporation (BOTAS). BOTAS sets the contract price for these sales at a price that correlates with the Brent crude price. The following price forecast was utilized for the evaluation.

| Year  | BOTAS<br>Gas Price<br>(USD/Mcf) |
|-------|---------------------------------|
| 2021  | 10.03                           |
| 2022  | 9.00                            |
| 2023  | 8.70                            |
| 2024  | 8.50                            |
| 2025  | 8.67                            |
| 2026  | 8.84                            |
| 2027  | 9.02                            |
| 2028  | 9.20                            |
| 2029  | 9.39                            |
| 2030  | 9.57                            |
| 2031  | 9.76                            |
| 2032  | 9.96                            |
| 2033  | 10.16                           |
| 2034+ | +2.0%/yr                        |

Unless otherwise stated, the gas price reference point is the receipt point on the applicable provincial gas transmission system known as the plant gate.

The plant gate price represents the price before raw gathering and processing charges are deducted.

## INDEPENDENT PETROLEUM CONSULTANTS' CONSENT

The undersigned firm of Independent Petroleum Consultants of Calgary, Alberta, Canada has prepared an independent evaluation of the **Trillion Energy International Inc.** (the "Company") South Akcakoca Sub-Basin property, offshore Turkey, and hereby gives consent to the use of its name and to the said estimates. The effective date of the evaluation is **October 31, 2021**.

In the course of the evaluation, the Company provided GLJ Ltd. personnel with basic information which included land data, well information, geological information, reservoir studies, estimates of on-stream dates, contract information, current hydrocarbon product prices, operating cost data, capital budget forecasts, financial data and future operating plans. Other engineering, geological or economic data required to conduct the evaluation and upon which this report is based, were obtained from public records, other operators and from GLJ Ltd. nonconfidential files. The Company has provided a representation letter confirming that all information provided to GLJ Ltd. is correct and complete to the best of its knowledge. Procedures recommended in the Canadian Oil and Gas Evaluation (COGE) Handbook to verify certain interests and financial information were applied in this evaluation. In applying these procedures and tests, nothing came to GLJ Ltd.'s attention that would suggest that information provided by the Company was not complete and accurate. GLJ Ltd. reserves the right to review all calculations referred to or included in this report and to revise the estimates in light of erroneous data supplied or information existing but not made available which becomes known subsequent to the preparation of this report.

The accuracy of any resources estimate is a function of the quality and quantity of available data and of engineering interpretation and judgment. While resources estimates presented herein are considered reasonable, the estimates should be accepted with the understanding that reservoir performance subsequent to the date of the estimate may justify revision, either upward or downward.

Revenue projections presented in this report are based in part on forecasts of market prices, currency exchange rates, inflation, market demand and government policy which are subject to many uncertainties and may, in future, differ materially from the forecasts utilized herein. Present values of revenues documented in this report do not necessarily represent the fair market value of the resources evaluated herein.

## CERTIFICATES OF QUALIFICATION

Patrick A. Olenick

G. Gabriella Carrelli

## CERTIFICATION OF QUALIFICATION

I, Patrick A. Olenick, Professional Engineer, 1920, 401 – 9th Avenue S.W., Calgary, Alberta, Canada hereby certify:

1. That I am an employee of GLJ Ltd., which company did prepare a detailed analysis of the South Akcakoca Sub-Basin property, offshore Turkey of Trillion Energy International Inc. (the "Company"). The effective date of this evaluation is October 31, 2021.
2. That I do not have, nor do I expect to receive any direct or indirect interest in the securities of the Company or its affiliated companies.
3. That I attended the University of Calgary where I graduated with a Bachelor of Science Degree in Mechanical Engineering in 2003; that I am a Registered Professional Engineer in the Province of Alberta; and, that I have in excess of nineteen years experience in engineering studies relating to oil and gas fields.
4. That a personal field inspection of the properties was not made; however, such an inspection was not considered necessary in view of the information available from public information and records, the files of the Company, and the appropriate provincial regulatory authorities.

(signed) *"Patrick A. Olenick"*

## CERTIFICATION OF QUALIFICATION

I, G. Gabriella Carrelli, Professional Geologist, 1920, 401 – 9th Avenue S.W., Calgary, Alberta, Canada hereby certify:

1. That I am an employee of GLJ Ltd., which company did prepare a detailed analysis of the South Akcakoca Sub-Basin property, offshore Turkey of Trillion Energy International Inc. (the "Company"). The effective date of this evaluation is October 31, 2021.
2. That I do not have, nor do I expect to receive any direct or indirect interest in the securities of the Company or its affiliated companies.
3. That I attended the University of Calgary where I graduated with a Master's Degree in Geology in 2002; that I am a Registered Professional Geologist in the Province of Alberta; and, that I have in excess of twenty-one years experience in geological studies and evaluations of oil and gas fields.
4. That a personal field inspection of the properties was not made; however, such an inspection was not considered necessary in view of the information available from public information and records, the files of the Company, and the appropriate provincial regulatory authorities.

Company: Trillion Energy International Inc.  
 Property: Akcakoca-6  
 Description: US Dollars

Resource Class: Prospective Resources  
 Development Class: Low Estimate - Prospect  
 Pricing: GLJ (2021-10)  
 Effective Date: October 31, 2021

### Unrisked Economic Forecast

Company: Trillion Energy International Inc.  
 Property: Guluc North  
 Description: \$US Dollars

Resource Class: Prospective Resources  
 Development Class: Low Estimate - Prospect  
 Pricing: GLJ (2021-10)  
 Effective Date: October 31, 2021

### Unrisked Economic Forecast
