## **UBIQUE MINERALS BECOMES INDEPENDENT REPORTING COMPANY**

Toronto, Ontario, August 13, 2018 – **Ubique Minerals Limited** ("Ubique") announces that the plan of arrangement with GreenBank Capital Inc (CSE:GBC and OTCMKTS:GRNBF and FRA:2TL) ("GreenBank") has been completed, and Ubique has become a reporting issuer in British Columbia and Alberta. Ubique has applied to list the Ubique common shares on the Canadian Securities Exchange ("CSE"). There is no guarantee that such application will be approved.

Ubique intends to shortly commence a phase I drilling program on its Daniels Harbour Zinc Project on the island of Newfoundland, Canada. Ubique owns 108 claims located in the Daniels Harbour area covering 27 sq kms, in two blocks. The Ubique claims cover three zones of zinc mineralization, namely P Zone, Cobo's Pond and Tilt Pond. The P Zone is where Ubique completed its 2017 drilling program, the highlight of which was a true width intersection of 13.6% Zinc over 12.2 metres including 17.43% Zinc over 8.6m. The 2018 drilling program will follow up on the 2017 diamond drilling results which discovered a zone of high grade zinc mineralization extending from the area where the workings of the former Daniels Harbour zinc mine were terminated. The drilling program will also target other areas with indications of zinc mineralization. The drilling will be undertaken in more than one phase to allow analytical results from drill holes to be received fast enough to guide subsequent drilling. The host rocks are soft limestones and dolostones which are drilled very rapidly.

The zinc mineralization intersected in the 2017 drilling program is a very pale coloured sphalerite, and characteristic of a low-iron Mississippi-Valley-Type carbonate rock geological environment analogous to many large deposits in north America. Approximately 7,000,000 tonnes averaging 7.8% zinc have been mined from the Daniels Harbour mine adjacent to Ubique's claims, and which was milled on site and shipped as a very high grade concentrate from nearby deep water port facilities to a custom zinc smelter.
