## **UBIQUE MINERALS RECEIVES FINAL CORE ANALYSES FROM THE 2018 DRILLING PROGRAM AT ITS DANIEL'S HARBOUR, NEWFOUNDLAND, ZINC DEPOSIT.**

Toronto, Ontario, November 30th, 2018 – Ubique Minerals Limited (CSE:UBQ) (“Ubique” or “the Company”) is pleased to announce that it has received the assay results from the last holes drilled in 2018 at its Daniel’s Harbour property in western Newfoundland. Results of samples from this final set of six holes, UM 23-18 through UM 28-18, identified high grade zinc intersections in all six holes, with intervals grading up to 16.1% zinc over 0.55 metres in hole UM 23-18. Full results are given below.

### Ubique 2018 Drilling Program Results

<b>Drill Hole #</b>	<b>Starting depth (m)</b>	<b>Width (m)</b>	<b>Assay Zn %</b>
UM-23-18	53.95	1.70	5.52
Including	54.50	0.55	16.10
UM-24-18	61.58	1.67	3.22
Including	62.95	0.30	7.90
UM-25-18	70.34	1.41	4.89
Including	70.34	0.58	6.15
UM-26-18	59.23	3.30	5.35
Including	59.23	0.28	13.20
UM-27-18	70.00	2.00	3.93
Including	70.00	0.48	11.50
UM-28-18	58.68	1.42	2.57
Including	58.68	0.21	6.34

All drill holes are vertical and intersections are considered to be close to true widths as the dip of the zone is less than 10 degrees.

Core sample analyses were undertaken by Eastern Analytical Ltd., of Springdale, Newfoundland, an ISO 17025 registered laboratory. As part of a quality control procedure a portion of the samples from the 2018 core drilling have been submitted to a second independent laboratory for check assaying. For which results are awaited.

All these drill holes were drilled in the area of the P-East Zone and were step out holes from the holes drilled in 2017 and earlier in 2018. The zinc mineralization occurs in the form of coarse grained, pale yellow to honey brown coloured sphalerite with more than 30% of the rock being sphalerite in the highest grade intervals. The balance of the rock is limestone or dolostone.

An independent Land Surveyor was engaged after the completion of all the drilling to survey the collars of all the holes drilled by Ubuque in 2017 and 2018 as well as the historic holes in the area which were known to have zinc mineralization. These precise collar positions and elevations have allowed a plan and sections to be prepared which have been uploaded to the Ubuque website.

The intersection in drill hole UM-25-18 is considered particularly significant as that hole and hole UM-17-18 were drilled 30 metres east of any other drilling and even though hole UM-25-18 did not intersect an extremely rich grading interval it demonstrates that more drilling is needed in its vicinity to locate a high grade core of the zone. Ubuque President, Gerald Harper said that “he was very pleased with the results of the 2018 drilling program as they had demonstrated not only that an extension of the P Zone has been defined over a strike length of 140 metres from the limit of historic mining but that it and other zones were open ended and a drilling program in 2019 is a priority”.

More information regarding Ubuque’s exploration activities and results and recently uploaded plans and sections will be found on their website at [www.ubiqueminerals.com](http://www.ubiqueminerals.com)

Dr. Gerald Harper, P.Geo.(Ont), the CEO of Ubuque, is the qualified person as defined by NI 43-101, responsible for the technical data presented herein and has reviewed and approved this release.

#### **About Ubuque Minerals Limited.**

Ubuque Minerals Limited (CSE:UBQ) is a zinc exploration company listed on the CSE (CSE:UBQ). It has focused on exploration of its 100% owned Daniel’s Harbour zinc property in Newfoundland, and was initially funded for two years by private equity including that from Greenbank Capital Inc (CSE:GBC and OTCMKTS:GRNBF and FRA:2TL). Ubuque became a publicly listed company in September 2018. Ubuque has undertaken one drilling program on its Daniel’s Harbour zinc project in 2017 and two more drilling campaigns in 2018, all of which were successful in delineating zinc mineralization extending from the vicinity of former mine workings. Ubuque has an experienced management group with a record of multiple discoveries of deposits worldwide, and owns an extensive and exclusive database of historic exploration results from the Daniel’s Harbour area. For more information on Ubuque please contact Gerald Harper, CEO, at (416) 232-9114 or by email [gharper@ubiquezinc.com](mailto:gharper@ubiquezinc.com) or see [www.ubiqueminerals.com](http://www.ubiqueminerals.com)
