

# Scotch Creek Ventures Inc. Completes Drilling on Cupz Project

## Esmeralda County Nevada

April 22, 2020, Vancouver, BC - Scotch Creek Ventures Inc. ("Scotch Creek" or the "Company") (CSE:SCV) announced it has completed 1,175 feet (358 meters) of drilling in four drill holes at the Cupz Project in Esmeralda County Nevada. Drilling was completed using a reverse-circulation drill rig. The holes were oriented easterly to test north-northeast trending gold-mineralized zone and the intersection of the mineralized zone with a west-northwest trending fault zone.

Drill sites were determined using geologic mapping, geochemical soil & rock sampling, and ground gravity & magnetic geophysical surveys completed by Scotch Creek Ventures Inc. Drill samples were collected every five feet and geologic logging was completed on site.

The results of the drill sample assays indicate that the structural zone targeting was successful and gold, silver, copper, zinc, and arsenic results provide a distinct signature corresponding with quartz veining and clay alteration along the mineralized zone and fault zones. Possible metal zonation is suggested by the holes in the Harkless Formation siltstone versus those in the Emigrant Formation limestone. This zonation may also be related to the intrusion of the felsic and mafic dikes.

Further work is recommended to identify the intrusive source of the mafic and felsic dikes. Pending additional funds, the drill results can be combined with field mapping and geochemical sampling to further explore for the intrusive source using the existing geophysical data.

All drill samples were submitted to the Bureau Veritas Minerals ("BV") laboratory in Reno, Nevada. Sample preparation was completed in Reno. Analytical work was completed at the BV laboratories located in Vancouver, BC., including ICP-MS analyses for base metals and trace elements, and gold determination by atomic absorption assay. Analytical results are subject to industry-standard and NI 43-101 compliant QAQC sample procedures at the laboratory, as described by BV.

Results of the drilling will be forthcoming after the data is analyzed and assembled.

E.L. "Buster" Hunsaker III CPG 8137 a "Qualified Person" as that term is defined under NI 43-101, has reviewed and approved the technical information contained in this news release.
