

## Scotch Creek Advances Geophysical Exploration on its Highlands West Lithium Project, Clayton Valley

VANCOUVER, BC – April 20<sup>th</sup>, 2022 – Scotch Creek Ventures Inc. (the “**Company**”) (CSE: SCV) (FSE: 7S2) (OTC: SCVFF) (“**Scotch Creek**” or the “**Company**”), is pleased to announce the proposed seismic spring work program on the 5,960-acre Highlands West (“**Highlands**”), lithium project in Clayton Valley, Nevada, has been finalized. The seismic program was designed by incorporating the recently completed gravity survey results announced on March 29<sup>th</sup>, 2022. Scotch Creek has contracted Hasbrouck Geophysics Inc. (“**Hasbrouck**”) to commence the reflection seismic survey.

The reflection seismic survey will advance our understanding of Highlands geology by shedding light on the map stratigraphy, bedrock topography (depending on depth), structures within the sediments, and bedrock (similarly depending on depth), the dip, continuity, and extent of aquifer units. In addition, the seismic line layout has been positioned to give the Company detailed data on the subsurface geology of both a strong, closed gravity low as well as the West, Northwest striking margins of the low.

Scotch Creek Technical Director, Mr. Robert D. Marvin, commented, “This seismic survey will prove important to the company as Scotch Creek is keen to add the detailed seismic data to the developing subsurface geological interpretation of the project. Furthermore, it appears that the central Highlands property is underlain by a well-developed graben with closed gravity lows occurring within the down-dropped part of the graben. The West and Northwest strike of the graben is interesting, as it closely matches the main lithium brine production well trend in the Central Clayton Valley brine field. Once the seismic data is collected, processed, and integrated with our previous gravity data, selection of high-quality brine and claystone drill targets will be undertaken.”
