### GEOCHEMICAL SURVEY INITIATED ON THE JEWEL RIDGE PROPERTY, NV

**Vancouver, British Columbia – June 18, 2020, Golden Lake Exploration Inc. (CSE: GLM) (“GLM” or the “Company”)** is pleased to report the initiation of a surface soil geochemical survey over a portion of the company's keystone Jewel Ridge gold property located near the town of Eureka, Nevada. The geochemical survey is being conducted by Rangefront Geological of Elko, Nevada and commenced on June 17, 2020.

The proposed soil chemical survey will comprise sampling on 200 ft (61 meter) intervals, on lines spaced approximately 400 ft (122 meters) in an east-west direction. The survey is planned for approximately 400 samples, including quality (QaQc) samples.

The area of the survey covers the northern and north-eastern portion of the property, where previous geochemical sampling (rock and soil samples) was sparse and drilling scattered and limited. The proposed survey covers the north-eastern extensions of the Magnet Ridge target and the newly defined Radio Tower target (see Press Release May 17, 2020). As previously reported by the Company, two distinct types of mineralization occur on the Property: 1) carbonate replacement deposits of silver-gold- lead-zinc (Ag-Au-Pb-Zn) and 2) Carlin-style disseminated gold deposits. Each type of mineralization has a specific geochemical signature that will be useful to identify new drill targets.

#### About the Jewel Ridge Property

The Jewel Ridge property is located on the south end of Nevada's prolific Battle Mountain - Eureka trend, along strike and contiguous to Barrick Gold's Archimedes/Ruby Hill gold mine to the north and Timberline Resources' advanced-stage Lookout Mountain project to the south.

The property comprises 96 unpatented lode mining claims and 30 patented claims covering approximately 728 hectares (1,800 acres). The Jewel Ridge property contains several historic small gold mines. The Company's focus is on Carlin-style disseminated gold deposits, the primary focus in the area since the late 1970s.

Nevada Carlin-type gold deposits (CTGD) have a combined endowment of more than 250 million ounces, which are concentrated (85 per cent) in only four trends or camps of deposits: Carlin, Cortez (Battle Mountain-Eureka), Getchell and Jerritt Canyon. The Company cautions that results on adjacent and/or nearby projects are not necessarily indicative of results on the Company's property.
