

**MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTHS ENDED APRIL 30, 2021**

INTRODUCTION

This Management Discussion and Analysis ("MD&A") provides a detailed analysis of the business of Leocor Gold Inc. ("Leocor" or the "Company") and compares its financial results for the six months ended April 30, 2021. This MD&A should be read in conjunction with the Company's consolidated financial statements for the six months ended April 30, 2021. The Company's reporting currency is the Canadian dollar and all amounts in this MD&A are expressed in Canadian dollars.

The Company's financial results are being reported in accordance with International Financial Reporting Standards ("IFRS") as issued by the IASB. Further details are included in Note 2 of the financial statements for the year ended October 31, 2020. This MD&A is dated June 29, 2021.

The following discussion contains forward-looking statements that involve numerous risks and uncertainties. Actual results of the Company could differ materially from those discussed in such forward-looking statements as a result of these risks and uncertainties, including those set forth in this prospectus under "*Forward-Looking Statements*" and under "*Risk Factors*".

During the year ended October 31, 2020 and six months ended April 30, 2021, the COVID-19 pandemic has caused significant and negative impact to the global financial markets. The Company's exploration activities have not been significantly affected by the pandemic to date. If the Company becomes unable to conduct future exploration activities over the long-term in the future, this may result in a potential material impairment of exploration and evaluation assets. The Company continues to monitor and assess the impact of COVID-19 on its business activities. Currently the potential impact is uncertain, and it is difficult to reliably measure the extent of the effect of the COVID-19 pandemic on future financial results.

During the year ended October 31, 2019 the Company completed its Initial Public Offering ("Offering") pursuant to a prospectus dated May 24, 2019 in which it issued an aggregate of 3,400,000 common shares of the Company at a purchase price of \$0.10 per common share. This generated aggregate gross proceeds of \$340,000.

PI Financial Corp. acted as the Agent ("Agent") on a commercially reasonable efforts basis in respect of the Offering and received a cash commission, a corporate finance fee and 200,000 corporate finance warrants in consideration for its services. In addition, the Company issued 238,000 non-transferable agent's warrants to purchase common shares. Each warrant is exercisable for a period of two years from closing of the offering, at an exercise price of \$0.10 per common share. Proceeds of the Offering will be applied to finance the Company's exploration work and for working capital purposes.

The Company received approval of its application to list its common shares on the Canadian Securities Exchange. Leocor's common shares were listed on the Exchange on June 18, 2019 and immediately halted pending closing of the Offering. The common shares commenced trading on the Exchange on June 21, 2019 under the trading symbol "LECR".

OVERALL PERFORMANCE AND HIGHLIGHTS

On February 1, 2021 Leocor announced that its common shares have commenced trading on the OTCQB marketplace under the symbol "LECRF". The Company's common shares will continue to trade on the Canadian Securities Exchange under the symbol "LECR". The Company expects that the listing on the OTCQB will provide greater visibility and convenience of trading for US investors, resulting in enhanced liquidity going forward.

In July 2020 the board of directors approved the appointment of Newman Wayne Reid to serve on the Board effective July 8, 2020. The new appointment follows the resignation of Charanjit Hayre, a Director of the Company since August 20, 2018.

Mr. Reid has over 40 years of experience in exploration and mining geology, spanning a variety of geological terrains, from Newfoundland to Northern B.C. and Alaska. He has held senior positions with various public companies and projects in the business of mining and exploration, including Noranda Inc., Hemlo Gold Mines, Echo Bay Mines Ltd. and St. Andrew Goldfields Ltd. Mr. Reid was part of the team involved in the discovery of the Brewery Creek Gold Deposit in Yukon Territory and the Boundary Massive Sulphide Deposit / Duck Pond Mine in Central Newfoundland. His experience includes gold, base metal and uranium/REE exploration in most geological environments in North America. He has over 20 years with the Noranda / Hemlo group in the capacity of District and Regional manager in a number of areas across Canada. He has over 10 years of experience in the Timmins camp with Echo Bay Mines, as Canadian Manager, and with St. Andrew Goldfields, as Exploration Manager.

In June 2020 the Company's Board of Directors approved the appointment of Alexander (Sandy) Stares to serve on the Board effective June 29, 2020. The new appointment follows the resignation of Christopher Cooper, a Director of the Company since August 20, 2018.

Mr. Stares has over 25 years experience in mineral exploration, spanning a variety of Canadian geological terranes, from Newfoundland to Yukon. He has also completed several tours prospecting in Indonesia and Mexico.

"We're very happy to add Sandy to the board, he brings a wealth of local knowledge to the team," said CEO, Alex Klenman. "I've known Sandy for years now, he brings valuable experience as a true prospector, and one that knows Atlantic Canada as well as anybody. He strengthens our plans in Newfoundland and will add immediate value as we plan and begin to execute exploration work at our Dorset project," continued Mr. Klenman.

Prior to forming his own Contracting Company, Stares Prospecting Ltd., Mr. Stares worked with IndoMetals, Rubicon Minerals Corporation, Freewest Resources of Canada, New Millenium, Lac Des Isle Mines, and Noranda. He was instrumental in the discovery of the H-Pond Gold Prospect and the Lost Pond Uranium Prospect. He also discovered numerous major mineral occurrences in Canada and abroad which have been the subject of extensive exploration programs.

Mr. Stares has served as President and CEO of Metals Creek Resources Corp. (TSXV:MEK) since December of 2007 and is also currently a director of White Metal Resources Corp. (TSXV:WHM), a

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE SIX MONTHS ENDED APRIL 30, 2021

director of the Qalipu Development Corporation and an alternate Director of the Newfoundland and Labrador Prospectors Association.

In February of 2013, Mr. Stares was awarded the Queen Elizabeth II Diamond Jubilee Medal for his dedication to his Peers, Community, Canada and the Prospecting Community. He was also one of the recipients of the PDAC "Bill Dennis Prospector of the Year" Award in March of 2007.

Prior to his exploration career, Mr. Stares served in the Canadian Air Force for 15 years and was awarded the Deputy Commander in Chief of NORAD "Certificate of Achievement" Award for exceptional performance.

In June 2020 the Company announced it has retained Wilson Jacobs to oversee the Company's exploration activities in Atlantic Canada.

Mr. Jacobs is an Earth Science graduate of Memorial University of NL, Canada, where he obtained a B.Sc (Geology) degree in 1980 (Hons B.Sc in 1984) and a B.Ed degree, in 1994. He has worked as a contract mineral exploration geologist for over 35 years, conducting gold, uranium, copper-nickel, and VMS base metal programs on behalf of many junior exploration/mining companies and independent prospectors. He is experienced in the mapping and structural interpretation of diverse geological terranes, with extensive involvement in diamond drilling, core logging, trenching, rock and geochemical (soil, stream & lake sediment) sampling, map compilations, interpretation of geophysical surveys, and map & report preparations. Mr. Jacobs is also credited as co-discoverer of the currently producing Pine Cove gold deposit, Baie Verte Peninsula, NL.

"We're pleased to welcome Wilson to the Leocor team" says Alex Klenman, CEO of Leocor Ventures. "He knows the ground in Atlantic Canada and more specifically, the area in and around the Dorset Gold project. His insight, experience and success are all valuable additions to our exploration efforts. Plans are underway to begin the next phase of exploration at Dorset so we're eager to begin unlocking the value we think this project holds," continued Mr. Klenman.

During the year ended October 31, 2020 the Company formally engaged JDS Energy & Mining Inc. ("JDS") to conduct a Preliminary Work Assessment on the Company's Dorset Gold, Copper Creek and Five Mile Brook Projects in the Baie Verte Mining District in Newfoundland, Canada.

The team at JDS will work alongside Leocor's field geologist, Wilson Jacobs, and the Company's senior management and board, in reviewing historical results, area history, geological and technical reports, and ongoing reconnaissance exploration programs, in an effort to prioritize targets for future drill programs at the Company's Newfoundland projects.

On July 28, 2020 the Company changed its name to Leocor Gold Inc. under the same trading symbol of "LECR".

In November Leocor common shares commenced trading on the Frankfurt Stock Exchange under the trading symbol "LGO". In January 2020 Leocor common shares commenced trading on the OTCQB marketplace under the symbol "LECRF". The Company's common shares will continue to trade on the Canadian Securities Exchange under the symbol "LECR". The Company expects that

the listing on the OTCQB and Frankfurt Stock Exchange will provide greater visibility and convenience of trading for US and European investors, resulting in enhanced liquidity going forward.

MINERAL PROPERTIES

STAR TREK PROJECT

On November 30, 2020 Leocor Gold entered into a definitive share exchange agreement with Hare Bay Resources Corp. ("Hare Bay"), pursuant to which the Company will acquire 100% of the issued and outstanding common shares in the capital of Hare Bay in exchange for common shares of the Company at a ratio of one Company share for every one Hare Bay Share. Pursuant to the definitive agreement, as a condition precedent to closing the transaction, Hare Bay, White Metal Resources Corp. and the Company have entered into an assignment and assumption agreement pursuant to which Hare Bay will assign to the Company its option to acquire from White Metal, 70% of the approximately 6,847-hectare Star Trek Gold Project, located in east-central Newfoundland. The project, as more particularly described below, is located in the Gander Zone geological group, in rocks similar to those underlying New Found Gold Corp.'s Queensway Gold Project located approximately 25 km to the west.

In order to exercise the Option, Leocor must: (1) make \$125,000 in cash payments to White Metal over two years, as follows: (1) \$50,000 on or before October 5, 2021; and (2) an additional \$75,000 on or before October 5, 2022; (2) issue 866,666 Company Shares to White Metal over two years, as follows: (1) 133,333 within 5 days after closing of the Transaction; (2) an additional 300,000 on or before October 5, 2021; and (3) an additional 433,333 on or before October 5, 2022; and (3) incur exploration expenditures of at least \$900,000 over three years, as follows: (1) \$150,000 on or before October 5, 2021; (2) an additional \$250,000 on or before October 5, 2022; and (3) an additional \$500,000 on or before October 5, 2023.

The project contains three areas of interest, the Western, Central and Eastern Zones. More than 50 gold occurrences have been discovered on the property through previous trenching and prospecting. The Western Zone features gold mineralization outlined for 2km, with grab samples** up to 3.5 grams-per-tonne ("g/t") gold ("Au") in quartz stock work, with veins featuring epithermal features, arsenopyrite and trace amounts of stibnite (see White Metal news releases dated December 18, 2019 and July 30, 2019). The Eastern Zone has been traced for 2km and displays characteristics of hydrothermal alteration, with silicification, albitization, and tourmaline. The Central Zone was trenched by Rubicon Minerals, which focused on gold showings in epithermal veining, resulting in highly anomalous values of gold, arsenic and antimony. Subsequent sampling by White Metal produced grab samples** up to 40 g/t Au (see White Metal's news release dated July 30, 2019). In December 2019, White Metal completed a 402 line-kilometre, fixed-wing, high resolution aeromagnetic gradiometer, and digital VLF-EM survey. The airborne survey mapped new structures and refined known geological structures (faults and shear zones) of which northeast-trending structures are known to host gold and antimony mineralization. The survey defined several new structures, including a series of secondary east-west trending structures, and numerous bedrock conductors suggestive of semi-massive to massive sulphides or graphitic sedimentary rocks. Together with historical data, this new information has generated new targets for ground truthing and follow-up exploration.

*(**The surface grab samples described here are selective by nature and are unlikely to represent average grades of the Project.)*

COPPER CREEK AND FIVE MILE BROOK PROJECTS

In August, 2020 (amended January 20, 2021) the Company entered into an option agreement with Lai Lai Chan, pursuant to which Leocor has the option to acquire a 100% interest in the Copper Creek and Five Mile Brook projects located north-central portion of the Baie Verte Peninsula, Newfoundland.

In order to exercise the Option, Leocor must: (1) make cash payments to Ms. Chan of \$250,000 over four years; (2) issue a total of 600,000 common shares of the Company to Ms. Chan over four years; and (3) incur work expenditures of \$1,650,000 over four years. Upon exercise of the Option, Ms. Chan will retain a 2% NSR royalty.

The acquisition of the Five Mile Brook (350 hectares) and Copper Creek claims (1025 hectares) brings the total of Leocor Gold's holdings on The Baie Verte Peninsula to 1,650 hectares. These two additions give Leocor a near contiguous land package that bridges the gap between Tenacity Gold to the south, and Anaconda Mining to the north (see figure 1).

“These are strategically significant acquisitions for Leocor,” said CEO, Alex Klenman. “With these additions we’ve grown our footprint by approximately 600% in one of the most prolific mining districts in Canada. The area is well known for gold, copper and base metal deposits. The popularity of Newfoundland as a mining district in general has grown substantially in recent times thanks to high-profile discoveries and transactions. We are pleased to be able to expand our operations there and plan on conducting some considerable exploration work on the new ground, as well as the Dorset project, in the coming months,” continued Mr. Klenman.

The Baie Verte Peninsula represents one of the more historically productive gold and base metal mining districts in Canada. The former Terra Nova base metal mine – one of several copper mines of the region, which operated during the late 1880's to early 1900's – lies 200 meters west of Leocor's Copper Creek claims. Former gold mining operations in the area include the Goldenville mine (of 1903-1906), located 8 km NE of the property, and the more recent Nugget Pond mine (1997-2000) of the eastern Baie Verte Peninsula area. Currently producing mines in the area include the Rambler base metal-gold mine (1961-present), located 14 km ESE of Baie Verte, and the Pine Cove and Stogertite mines (collectively, 2011-present) located 1.6 km and 5.4 km NE of the current property.

Copper Creek's southwestern section is host to a number of gold prospects and copper occurrences associated with extensive alteration/shear zones developed within a thrust-faulted sequence of quartz-Fe-carbonate-fuchsite-altered gabbros, ultramafics and mafic volcanics, of the Advocate (ophiolite) Complex, and intermediate to silicic volcanoclastics & tuffs and microgabbroic dykes/sills, of the Flatwater Pond (cover sequence) Group.

Historical results at Copper Creek include 3.9 grams-per-tonne (“g/t”) gold (“Au”) over 4 meters in a channel sample, and 16 g/t Au, 11.35 g/t Au, 9.20 g/t Au, 8.23 g/t Au, 7.33 g/t in grab samples* (Noranda, 1988; Anaconda Mining 2004; Chan 2013). Five Mile Brook has been subject to minimal

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE SIX MONTHS ENDED APRIL 30, 2021

exploration in the past but shows potentially important geological continuity to the Company's Dorset Gold Project, which lies directly contiguous to the northern boundary.

(Note: the reader is cautioned that rock grab samples are selective by nature and may not represent the true grade or style of mineralization across the property).

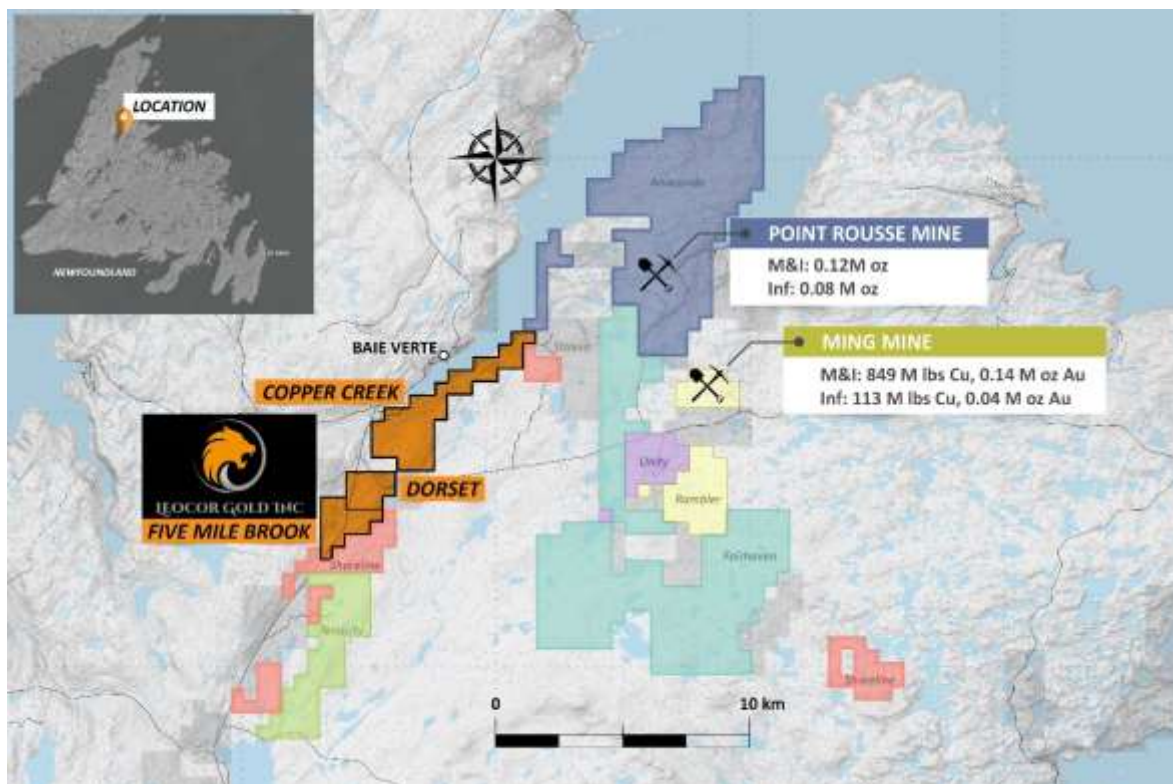

Figure 1: Leacor Gold holdings in the Baie Verte Peninsula, central Newfoundland, Canada

DORSET PROJECT

In April 2020 the Company signed an option agreement to acquire 100% interest in two mineral claims located in the Province of Newfoundland and Labrador referred to as the “Dorset Gold Project”. To exercise the option, Leacor must make cash payments to Nexus of \$1,250,000 over four years and incur work expenditures of \$1,500,000 over five years. The Dorset Project is subject to a 2% net smelter returns royalty on commercial production from the Dorset Project in favour of United Gold Inc. and Margaret Duffit, 50% of which may be purchased at any time for a cash payment of \$1,000,000. The Dorset option agreement is with a party related to the Company having a director in common.

The Dorset Gold Project is a 275-ha property, located south of the Pine Cove Gold Mine, in the Baie Verte Mining District, north central Newfoundland, Canada, with multiple zones of high-grade gold mineralization. The Main Zone includes three historic occurrences, with up to 409 grams-per-tonne (g/t) Au in grab samples, with channel sampling results of 177 g/t Au over 0.35 metre, 22 g/t Au over 1.5m, 17.2 g/t Au over 1.5m and 14.7 g/t Au over 1.5m. Historic drilling includes DDH 87-1, which intersected 9.5 g/t Au over 1.3m* (MacDougall, 1990).

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE SIX MONTHS ENDED APRIL 30, 2021

Historic select sampling at the Braz Zone returned values of 314 g/t Au, 40 g/t Au, 31.4 g/t Au, 21.2 g/t Au, 19.2 g/t Au and 14.8 g/t Au. Historic channel sampling across the vein returned 9.5 g/t Au over 0.4m, 5.7 g/t Au over 0.5m and 1.2 g/t Au over 0.65m. Weighted averages of historic rock sampling encompassing vein and mineralized wall rock returned values of 5.8 g/t Au over 1.9m, 3.1 g/t Au over 2m and 2.5 g/t Au over 1.5m (MacDougall, 1990).

Other zones include: The Albatross, where historic rock sampling of mineralized zones returned values up to 9.6 g/t Au and locally up to 30.3 g/t Au. Assay results from three 1987 diamond drill holes include 1.0 g/t Au over 7.3m, 1.81 g/t over 4.3m and 1.02 g/t over 2.2m; the Phoenix Zone, where grabs of altered gabbro assayed up to 5.8 g/t Au, 5.5 g/t Au and 3.3 g/t Au, and diamond drill hole intersection of 1.07 g/t Au over 5.45m; and the Gunshot Zone, where veins containing visible gold and pyrite returned grab samples that assayed up to 162 g/t Au and channel samples that assayed up to 18 g/t Au over 0.4m (MacDougall, 1989).

In May 2020 the Company began a comprehensive review of available data on the Dorset Gold Project. The Company is currently implementing the review as a preliminary step in formulating budgets and work plans for its 2020/2021 exploration programs. Phase one exploration is anticipated to concentrate in and around known quartz veins with strong historical showings, and may include additional prospecting, sampling, soil geochemistry, and channel sampling, in and around known quartz veins with strong historical showings.

The Dorset #1 vein is comprised of two narrow, discontinuous quartz veins, trenched for 60m along strike. The western vein varies from 2 to 15cms in width and contains visible gold, pyrite and galena. Grab samples collected from this vein assayed up to 409 grams-per-tonne ("g/t") gold ("Au") and channel samples of 177 g/t Au over 0.35m; 56 g/t Au over 2.5m, and 41.6 g/t Au over 1.5m (Noranda assessment reports).

The Dorset #2 vein system is located 37m west of the Dorset #1 vein. It is the most significant of the veins and has been trenched and tested by diamond drilling over a strike length of 110 m. Further trenching and limited diamond drilling have indicated a minimum strike length of 400m and may extend up to 900m (Dorset Extension).

Mineralization comprises of visible gold, pyrite, galena, chalcopyrite, bornite and minor sphalerite and arsenopyrite. Diamond drilling has confirmed the presence of high-grade gold grades.

In July 2020 the Company began field work at the Dorset project. Company's geologist Wilson Jacobs is overseeing the preliminary field work, with the initial focus directed at locating a number of historic trench sites from which high-grade gold assay results were reported by Noranda Exploration Co. Ltd, during 1997-1999.

A number of target areas have been delineated for follow-up, based on the historic work and these include:

Dorset – up to 408 grams-per-tonne ("g/t") gold ("Au") (grab samples), 41.6 g/t Au over 1.5m (channels) and 9.5 g/t Au over 1.3m in a diamond drill hole (ddh).

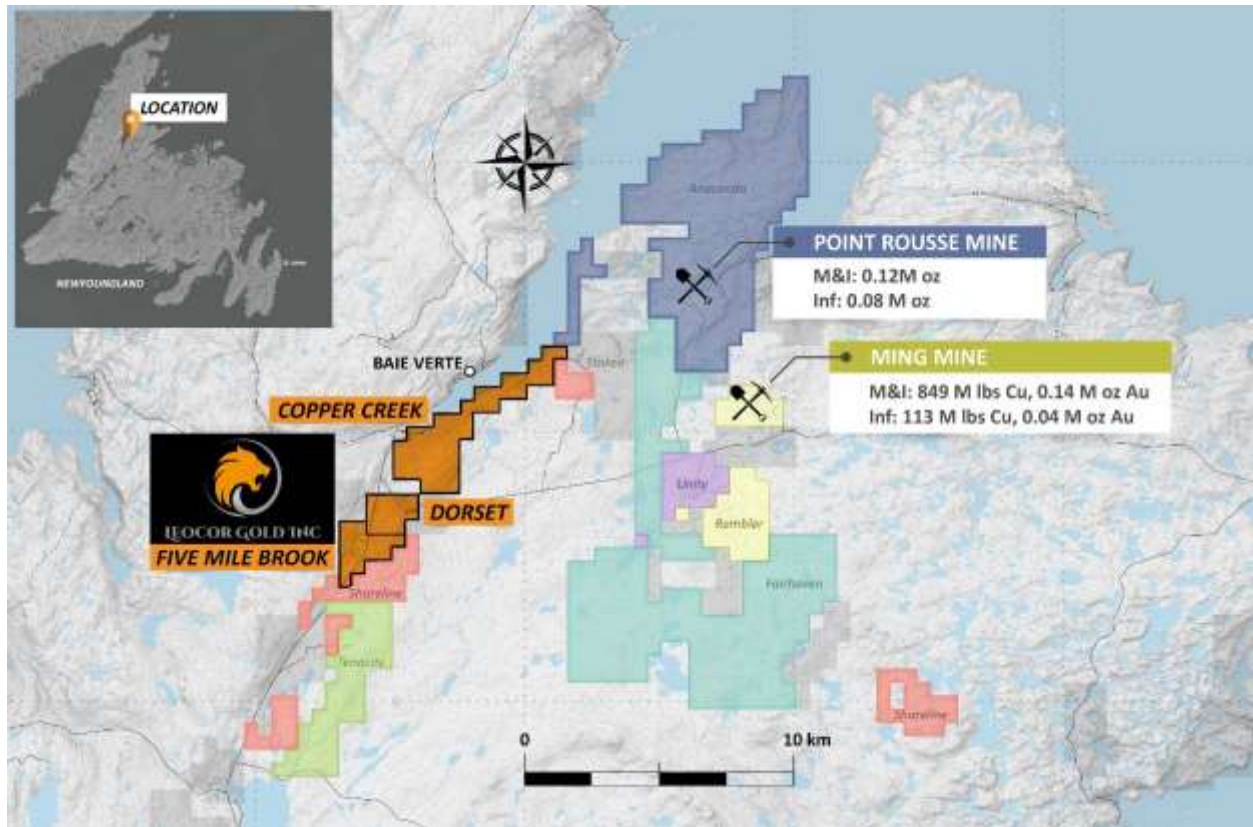

Dorset Extension – up to 56 g/t Au over 2.5m (channels) and 2.32 g/t Au over 0.5m (ddh).

MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTHS ENDED APRIL 30, 2021

Braz – up to 314 g/t Au & 40 g/t Au (grabs) and 5.8 g//t over 1.9m (channels).

Gunshot – up to 162 g/t Au (grabs), 18 g/t Au over 0.4m (channels) & 5.73 g/t over 0.55m (ddh).

CCZ – up to 5.5 g/t Au & 4.6 g/t Au (grabs) and 0.6 g/t Au over 5.5m (channels).

A complete outline of these targets is described below and locations are shown on fig.2.

MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTHS ENDED APRIL 30, 2021

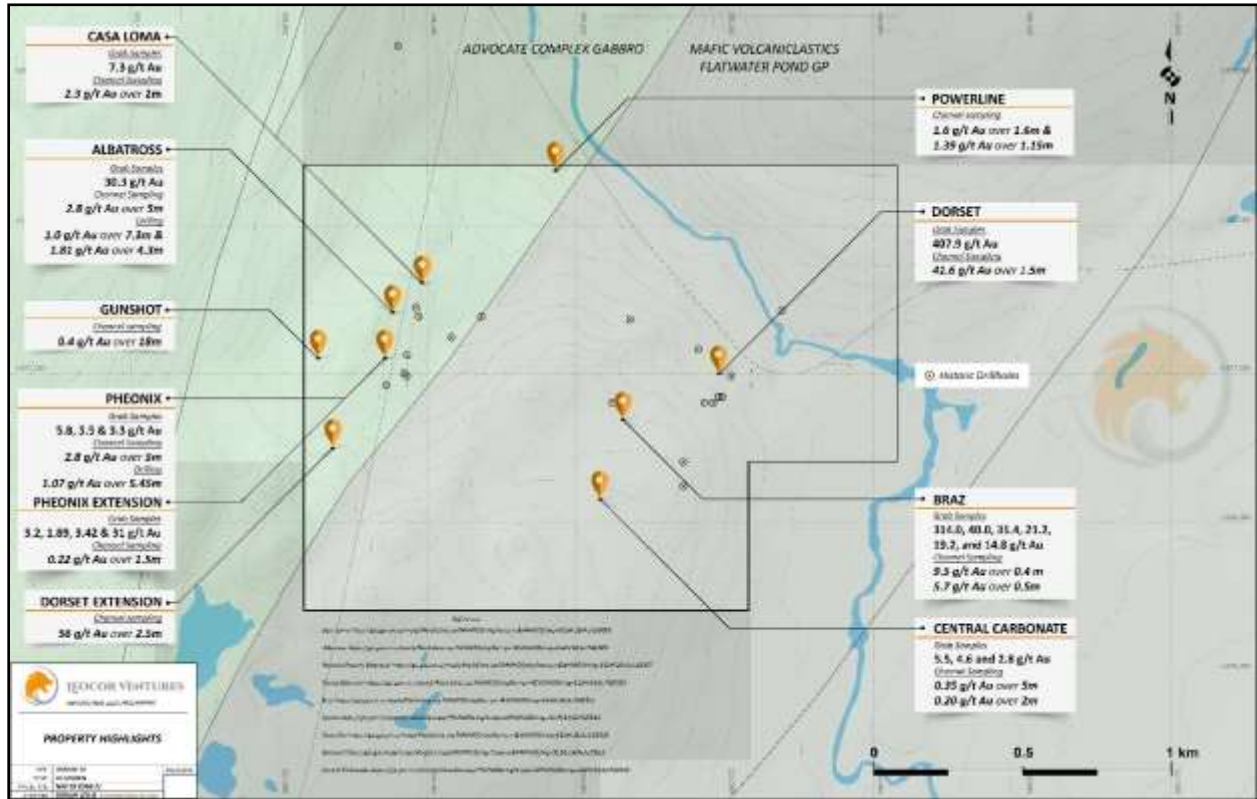

Figure 2: Known mineralized zones at the Dorset Gold Project, Newfoundland

The gold occurrences are associated mainly with quartz vein systems cutting strongly altered gabbroic and mafic volcanic host rock. Gold values have been obtained from the host mafic volcanic as well, as the Central Carbonate Zone (CCZ) which includes a 70m wide zone of iron-carbonate alteration with sporadic 1-2% pyrite and associated anomalous gold traceable over a 700m strike length (see gold results above).

With the exception of a small exposed section of quartz vein at the Dorset, the above described trenches are heavily concealed by infilled debris and significant vegetation regrowth. The various trench prospects - formerly mapped and plotted in relation to the early Noranda (cut-line) grid - are presently being documented by GPS and positioned in relation to a newer (2013) grid constructed by Tenacity Gold Mining Co. Ltd.

A compilation of all historical data involving geology, soil geochemistry, trenches and drill holes will be transferred to the newer grid map. This will aid the exploration strategy designed to follow up on yet-untested, favourable, geological and gold-in-soil geochemical trends. The latter grid, which is in fair to good condition, represents an excellent asset to the property by which a recommended Induced Polarization (“IP”) survey can be implemented as well as follow-up soil geochemical surveys.

Exploration Approval for work on the Dorset showing has already been granted, and concurrent with the above work, an application for additional approvals was filed with government on July 14, 2020 to conduct retrenching of the remaining known sites. The trenching program is designed to confirm and expand on the earlier-reported gold-bearing zones.

MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTHS ENDED APRIL 30, 2021

SHOTGUN PROJECT

In December 2020 the Company announced that it has decided not to pursue the acquisition of the Shotgun Mineral Property located in the Lillooet Mining Division near Pemberton, British Columbia (the "Shotgun Property"), and has, accordingly, terminated its option agreement.

Selected Financial Information and Additional Disclosure

The following financial data for the period commencing July 26, 2018 (incorporation) to October 31, 2020 is derived from the Consolidated Financial Statements and should be read in conjunction with the Consolidated Financial Statements.

Six months ended April 30, 2021

All expenses increased significantly during the six months ended April 30, 2021 as compared to the expenses incurred during the six months ended April 30, 2020. The major contributor to the increase in loss incurred by the Company during the six months ended April 30, 2021 was loss on acquisition of the subsidiary of \$2,326,036.

During the six months ended April 30, 2021 legal expenses increased by \$31,044 and filing expenses increased by \$18,368 compared to the six months ended April 30, 2020. Increase in legal expense relates to the acquisition of the subsidiary.

Leocor spent \$30,000 for consulting services provided by a director of the Company. In addition, the Company recorded marketing expense of \$7,500 during the six months ended April 30, 2021. There were no consulting services and marketing expenses recorded during the six months ended April 30,

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE SIX MONTHS ENDED APRIL 30, 2021

2020. The changes in these expenses reflect the change in status of the Company as now a public company with its shares listed on Canadian Stock Exchange.

Three months ended April 30, 2021

All expenses increased during the three months ended April 31, 2021 as compared to the expenses incurred during the three months ended April 30, 2020.

During the three months ended April 30, 2021 legal expenses increased by \$8,786 and filing expenses increased by \$3,986 compared to the three months ended April 30, 2020. Increase in legal expense relates to the acquisition of the mineral properties.

Leocor spent \$15,000 for consulting services provided by a director of the Company. In addition, the Company recorded marketing expense of \$7,500 during the three months ended April 30, 2021. There were no consulting services and marketing expenses recorded during the three months ended April 30, 2020.

The changes in these expenses reflect the change in status of the Company as now a public company with its shares listed on Canadian Stock Exchange.

Liquidity and Capital Resources

During the six months ended April 30, 2021 the Company issued 4,750,001 shares on acquisition of a subsidiary, 2,633,333 for the mineral properties and 11,550 on exercise of warrants.

On August 7, 2020 the Company closed a non-brokered private placement of 6,000,000 units at a price of \$0.40 per unit for gross proceeds of \$2,400,000. Each unit consists of one common share of the Company and one common share purchase warrant. Each warrant is exercisable to acquire one additional common share at a price of \$0.50 per share for a period of 24 months. The Company paid finders' fees in the amount of \$48,020 and granted 120,500 finders' warrants exercisable at a price of \$0.50 for a period of 24 months.

On May 24, 2019 the Company closed initial public offering of 3,400,000 shares at a price of \$0.10 per share. In connection with completion of the offering the Company paid \$27,872 and issued 238,000 of finders' warrants exercisable at \$0.10 until May 24, 2021.

In January 2019, the Company issued 600,000 shares for the Shotgun mineral property.

Leocor has no revenue-producing operations. During the six months ended April 30, 2021, Leocor had an accumulated loss of \$3,643,411. As at April 30, 2021, Leocor had a working capital balance of \$2,042,887, including cash of \$2,069,679, which amount is considered adequate to meet its requirements for the ensuing 12 months based on current budgeted expenditures for operations and exploration of its mineral property interests. Working capital is held almost entirely in cash, significantly reducing any liquidity risk of financial instruments held by Leocor.

Leocor does not have any commitments for capital expenditures.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE SIX MONTHS ENDED APRIL 30, 2021

The Company is dependent on external financing, including equity issuances and debt financing, to fund its activities. Management of the Company will determine whether to accept any offer to finance weighing such things as the financing terms, the results of exploration, share price at the time and current market conditions, among others. Circumstances that could impair Leocor's ability to raise additional funds include general economic conditions, metal prices and the other factors set forth below under "*Risk Factors*".

On an ongoing basis, and particularly in light of current market conditions for mineral exploration, management evaluates and adjusts its planned level of activities, including planned, exploration and committed administrative costs, to maintain adequate levels of working capital.

Off-Balance Sheet Arrangements

Leocor has not participated in any off-balance sheet or income statement arrangements.

Key Management Compensation and Related Party Transactions

Parties are considered to be related if one party has the ability, directly or indirectly, to control the other party or exercise significant influence over the other party in making financial and operating decisions. Related parties may be individuals or corporate entities. A transaction is considered to be a related party transaction when there is a transfer of resources or obligations between related parties.

Key management includes directors and key officers of the Company, including the President, Chief Executive Officer ("CEO") and Chief Financial Officer ("CFO"). Amounts paid and accrued to key management are included in general expenses as follows:

	April 30, 2021	April 30, 2020
Administration fees	\$ 30,000	\$ 30,000
Consulting fees	30,000	-
Total key management compensation	\$ 60,000	\$ 30,000

There were no payables to related parties as at April 30, 2021 or October 31, 2020.

Financial Instruments

As at April 30, 2021 and October 31, 2020, the Company's financial instruments consisted of cash, accounts payable and receivable. The receivables are from a government agency and were received subsequent to April 30, 2021.

The fair values of the Company's financial instruments approximate their carrying value, due to their short-term maturities or liquidity.

As at April 30, 2021, Leocor's risk exposure and the impact on Leocor's financial instruments are summarized below.

Risks and Uncertainties

The operations of Leocor are speculative due to the high-risk nature of its business, which is the acquisition and exploration of mining properties. Below is a description of the risk factors that could materially affect Leocor's future operating results and could cause actual events to differ materially from those described in forward-looking statements.

Credit Risk

Credit risk is the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a financial loss. As at April 30, 2021, Leocor holds cash balances at a chartered bank. Leocor has assessed the credit risk to be low.

Liquidity Risk

Liquidity risk is the risk that an entity will encounter difficulty in raising funds to meet commitments associated with financial instruments. Leocor manages liquidity risk by maintaining sufficient cash balances and to ensure that there is sufficient capital to meet short-term obligations. As at April 30, 2021, Leocor had a working capital balance of \$1,516,601, including cash of \$1,555,447.

Market Risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates and commodity and equity prices.

Interest Rate Risk

Interest rate risk is the risk that the future cash flows of a financial instrument will fluctuate due to changes in market interest rates. Leocor does not have any interest-bearing debt, however it does hold cash balances in an interest-bearing bank account.

Foreign Currency Risk

The functional currency of Leocor is the Canadian dollar. As of April 30, 2021, Leocor had no financial assets and liabilities that were subject to currency translation risk.

Price Risk

Leocor is exposed to price risk with respect to commodity and equity prices. Equity price risk is defined as the potential adverse impact on Leocor's earnings due to movements in individual equity prices or general movements in the stock market. Commodity price risk is defined as the potential adverse impact on earnings and economic value due to commodity price movements and volatility. Future declines in commodity prices may impact the valuation of long-lived assets.

MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTHS ENDED APRIL 30, 2021

Outstanding share data

As of June 29, 2021, the Company has 31,683,628 shares issued and outstanding.

As of June 29, 2021, the Company has 9,450 warrants exercisable at \$0.10 until June 20, 2021 and 5,945,430 warrants exercisable at \$0.50 until August 7, 2022.

As at June 29, 2021, the Company has 600,000 stock options exercisable at \$0.80 until July 23, 2025.
