

## Pharmather Announces Exclusive License Agreement with the University of Arizona for the Commercialization of Ketamine in the Treatment of Parkinson's Disease

TORONTO, Oct. 15, 2020 -- Pharmather Inc., a wholly-owned subsidiary of Newscope Capital Corporation ("Pharmather" or the "Company") (CSE: PHRM) and a specialty life sciences company focused on the research and development of psychedelic pharmaceuticals, is pleased to announce that the Company has entered into an exclusive license agreement with the University of Arizona for the development and commercialization of ketamine in the treatment of Parkinson's disease. Pharmather will seek U.S. Food and Drug Administration ("FDA") approval of an investigational new drug ("IND") application to conduct a Phase II clinical study this year.

"We are very pleased to have an exclusive license agreement in place with the University of Arizona to allow Pharmather to advance the clinical program of ketamine in the treatment of Parkinson's disease, specifically targeting levodopa-induced dyskinesia, a significant clinical unmet need," said Fabio Chianelli, Chief Executive Officer of Pharmather. "With promising results in preclinical models and in Parkinson's disease patients, we aim to expeditiously advance the ketamine program in Parkinson's disease to reduce dyskinesia associated with levodopa therapy with plans for expansion to treat depression and pain associated with Parkinson's disease and other motor disorders that are prevalent in Multiple sclerosis, Alzheimer's and Huntington's disease, ultimately creating a unique pharmaceutical-based ketamine franchise."

### *Promising Results with Ketamine in Parkinson's Disease*

Ketamine is an FDA-approved drug with a known safety profile. Prior clinical reports suggest that low-dose ketamine infusions are well tolerated and can improve pain and depression, both often comorbidities in Parkinson's disease patients. Inventors Dr. Scott Sherman and Dr. Torsten Falk, both associate professors at The University of Arizona College of Medicine – Tucson, are working with Tech Launch Arizona to patent the results from preclinical data and five case studies in Parkinson's disease patients showing that low-dose sub-anesthetic ketamine infusion indicates tolerability, safety and the potential of long-term therapeutic benefit to reduce Levodopa-induced dyskinesia, improve on time, and reduce depression. ### *About Parkinson's Disease*

Parkinson's disease is a debilitating disorder that affects over 1 million people in the U.S. and more than 7 million people worldwide. There is currently no cure for Parkinson's disease, although some drug combinations are used to treat the disease symptoms. Levodopa is the gold standard for Parkinson's disease treatment but features significant drawbacks, including the major side effect of dyskinesia and a loss of effectiveness over time. Approximately 50% of patients with PD will develop Levodopa-induced dyskinesia ("LID") 4-5 years after the initiation of levodopa therapy, and this number rises to 80% after 10-12 years of levodopa treatment. LID may interfere with motor function, cause or aggravate pain and is known to worsen the quality of life significantly. Individuals with Parkinson's disease may experience a host of non-motor symptoms such as autonomic dysfunction, psychiatric (depression), cognitive and sensory symptoms (pain). Therefore, there is an urgent need for alternative treatments and has been identified by the regulatory authorities, patient advocacy groups such as Michael J. Fox Foundation, and key opinion leaders as a substantial unmet medical need.

### **About Pharmather Inc.**

Pharmather Inc., a wholly-owned subsidiary of Newscope Capital Corporation (CSE: PHRM), is a specialty life sciences company focused on the research and development of psychedelic pharmaceuticals. Pharmather repurposes psychedelic pharmaceuticals, such as ketamine and psilocybin, for FDA approval to treat disorders of the brain and nervous system. Our team includes world-class strategic partners, advisors and a strong leadership team with a proven track record of success in drug development, business development and capital markets. Our goal is to advance the development of panaceAI™, our drug repurposing artificial intelligence platform, and advance our clinical product pipeline with ketamine and psilocybin in Parkinson's disease, depression, traumatic brain injury and stroke. ### *Cautionary Statement*

*This press release contains 'forward-looking information' within the meaning of applicable Canadian securities legislation.*

These statements relate to future events or future performance. The use of any of the words “could”, “intend”, “expect”, “believe”, “will”, “projected”, “estimated” and similar expressions and statements relating to matters that are not historical facts are intended to identify forward-looking information and are based on the Company’s current belief or assumptions as to the outcome and timing of such future events. Forward-looking information in this press release includes information with respect to the Company will seek U.S. Food and Drug Administration (“FDA”) approval under an investigational new drug (“IND”) to conduct a Phase II clinical study this year, plans for expansion to treat depression and pain associated with Parkinson’s disease and other motor disorders that are prevalent in Multiple sclerosis, Alzheimer’s and Huntington’s disease, ultimately creating a unique pharmaceutical-based ketamine franchise, and product developments. Forward-looking information is based on reasonable assumptions that have been made by the Company at the date of the information and is subject to known and unknown risks, uncertainties, and other factors that may cause actual results or events to differ materially from those anticipated in the forward-looking information. Given these risks, uncertainties and assumptions, you should not unduly rely on these forward-looking statements. The forward-looking information contained in this press release is made as of the date hereof, and Company is not obligated to update or revise any forward-looking information, whether as a result of new information, future events or otherwise, except as required by applicable securities laws. The foregoing statements expressly qualify any forward-looking information contained herein. Factors that could cause actual results to differ materially from those anticipated in these forward-looking statements are described under the caption “Risk Factors” in Company’s management’s discussion and analysis for the period of August 30, 2020 (“MD&A”), dated October 1, 2020, which is available on the Company’s profile at [www.sedar.com](http://www.sedar.com).
