Determining the value in use requires the Company to estimate expected future cash flows associated with the assets and a suitable discount rate in order to calculate present value.

Share-based payments

The amounts recorded for share-based payments are based on estimates. The Black Scholes model is based on estimates of assumptions for expected volatility, expected number of options to vest, dividend yield, risk-free interest rate, expected forfeitures and expected life of the options. Changes in these assumptions may result in a material change to the amounts recorded for the issuance of stock options.

Level 3 - inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The Company's financial instruments include cash, deposits, accounts payable, notes payable and other payables.
