

HAVN Life Successfully Exports Psilocybin from Jamaica Facility into the U.S. for Research Purposes

The Company was able to export naturally derived psilocybin to their California-based Supply Partner, Mycrodose Therapeutics late last week.

December 13th, 2021

Vancouver, BC – [Havn Life Sciences Inc.](#) (CSE: [HAVN](#)) (OTC: [HAVLF](#)) (FSE: [5NP](#)) (the “Company” or “Havn Life”), a biotechnology company pursuing standardized extraction of psychedelic compounds for investigational research as potential active pharmaceutical ingredients (APIs) to support brain health, is pleased to announce it has successfully exported naturally derived psilocybin from its facility in Jamaica into the U.S.

HAVN Life’s operations in Jamaica are facilitated by strategic partnerships with [Hypha Wellness](#) and [P.A. Benjamin Manufacturing Company](#) to provide cultivation and processing facilities for psilocybin-containing mushrooms for authorized research purposes.

The importation of the naturally derived psilocybin into California was completed after the Company’s supply partner [Mycrodose Therapeutics](#) was granted an import license from the United States Drug Enforcement Administration (DEA). Mycrodose will be acting as a distributor for HAVN Life’s naturally-derived psilocybin in the United States, allowing the Company to fulfill the various supply agreements it has in place.

“With their track-record of working with the U.S. Food and Drug Administration (“FDA”), a proven track record of core business fundamentals, and registration with the DEA, Mycrodose Therapeutics is an ideal supply partner for HAVN Life,” says CEO Tim Moore. “Having a supply partner that gives us access to the rapidly growing U.S. market for research purposes is absolutely key for us as we look to expand our business in 2022,” he adds.

The successful import by Mycrodose Therapeutics in the U.S. comes on the heels of HAVN Life’s recent announcement of the import of naturally derived psilocybin into Canada by their supply partner, [Nectar Health Sciences Laboratory Division Inc.](#), signalling a ramping up of supply chain activities and positioning HAVN Life as an early mover with its ability to

supply companies with high-quality, naturally derived psilocybin for investigational research for potential therapeutic purposes.

“This partnership helps support our company’s ambitious product development and R&D milestones by offering a potential alternative to synthetic derived psilocybin at a fraction of the cost for use in investigational research,” says Mycrodose Therapeutics CEO Chad Conner. “Most importantly, our partnership with HAVN Life helps address supply chain issues with obtaining GMP psilocybin for our own research and the research of other US-based Institutions researching psychedelics for authorized purposes,” he adds.

An [MOU between HAVN Life and Mycrodose Therapeutics](#) was announced in September, kickstarting a supply and distribution partnership that is now fully operational. The partnership will allow HAVN Life to provide naturally derived GMP psilocybin in the U.S. for authorized research purposes at competitive prices, and aims to help ease supply chain issues currently facing hundreds of pharmaceutical companies, research institutions, and nonprofits across the United States of American that cannot find psilocybin for authorized research purposes at an affordable price.

The supply of psilocybin to Mycrodose therapeutics will be in compliance with all applicable rules and regulations of the U.S. Drug Enforcement Administration.
