

QI MATERIALS ANNOUNCES NEWLY DISCOVERED ZONE AT THE CHARLEVOIX SILICA PROJECT

Lachute, Québec, November 15, 2023 – Québec Innovative Materials Corp. (“QI Materials”, “QIMC”, or the “Company”) (CSE: QIMC ; FSE: 7FJ) is pleased to announce that new zones of visually pure quartzite have been discovered on the Company’s wholly owned Charlevoix Silica Project.

In October, the QI Materials field team followed up on the newly discovered high-grade zones 4 and 5 announced in August (see [August 29, 2023](#) news release). As shown on Figure 1, an additional 6th zone has been confirmed approximately 250 metres southeast of zone 5. Additional potential outcrops have been located to the east of zone 5. Follow up work will be required on these areas.

“Another wonderful job by our exploration team. It is encouraging that every time our team goes out there we add strike length to the quartzite formation and discover new zones.” Stated Raymond Wladichuk, P.Geo., CEO of QI Materials Corp.

As shown on Figure 2, zones 4 and 5 have been mapped in detail, cleaned off, channel sampled, and over 120m of strike length is now exposed at surface. The true thickness and width of the quartzite formation is currently unknown as the contacts are buried beneath overburden, however we can observe 5-10 metres high quartzite walls in certain areas. As shown below on Figure 3, the quartzite from zone 6 appears to be visually highly pure. The samples collected this program have been sent to the lab for purity analysis and the Company eagerly awaits the results.

John Karagiannidis, Chairman of QI Materials commented “Our high-grade Charlevoix project keeps on getting bigger and we look forward to further expanding the discovery and current zones. A great job by our team with this new high-grade zone and discovery.”

Qualified Person

Raymond Wladichuk, P.Geo., (OGQ permit number: 02287), is the CEO of Québec Innovative Materials Corp., and a Qualified Person for National Instrument 43-101 – Standards for Disclosure of Mineral Projects, has reviewed and approved the scientific and technical information contained in the news release.

About High Purity Quartz

High purity quartz (SiO_2) plays a pivotal role in two critical technologies shaping the future: solar panels and lithium silicon anode batteries. In the realm of renewable energy, quartz is the raw feed source of silicon metal (Si), a fundamental component in producing high-efficiency solar panels. Beyond solar panels, silicon metal is also a promising ingredient in lithium silicon anode batteries, offering the potential for increased energy storage capacity and improved battery performance, underscoring the indispensable role of quartz in advancing sustainable energy and

cutting-edge technology. Furthermore, quartz-derived silicon has gained significant strategic importance, recently earning a place on the USA's strategic mineral list.

About Québec Innovative Materials Corp.

Québec Innovative Materials Corp. (CSE: QIMC; FSE: 7FJ) (formerly Québec Silica Resources Corp.) is a mineral exploration, and development company with a portfolio of natural resource assets including high grade silica, hydrogen, and helium properties. QIMC is working toward becoming a sustainable supplier of resources which are essential in advanced batteries and the electrification of the green economy. The Company has a 100% interest in the Charlevoix Silica Project, near Clermont, Québec, Canada, the River Valley Silica Project near Sudbury, Canada, as well as other mineral properties in Québec. The Company also performs pilot processing on industrial minerals, refining processes to create custom products.

Forward-Looking Statements

This news release contains statements that constitute "forward-looking statements". Such forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause Québec Innovative Materials' actual results, performance or achievements, or developments in the industry to differ materially from the anticipated results, performance or achievements expressed or implied by such forward-looking statements. Forward-looking statements are statements that are not historical facts and are generally, but not always, identified by the words "expects," "plans," "anticipates," "believes," "intends," "estimates," "projects," "potential" and similar expressions, or that events or conditions "will," "would," "may," "could" or "should" occur.

Although Québec Innovative Materials believes the forward-looking information contained in this news release is reasonable based on information available on the date hereof, by their nature, forward-looking statements involve assumptions, known and unknown risks, uncertainties and other factors which may cause our actual results, performance or achievements, or other future events, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements.

Examples of such assumptions, risks and uncertainties include, without limitation, assumptions, risks and uncertainties associated with general economic conditions; the Covid-19 pandemic; adverse industry events; future legislative and regulatory developments in the mining sector; the Company's ability to access sufficient capital from internal and external sources, and/or inability to access sufficient capital on favorable terms; mining industry and markets in Canada and generally; the ability of Québec Innovative Materials Corp. to implement its business strategies; competition; and other assumptions, risks and uncertainties.

The forward-looking information contained in this news release represents the expectations of the Company as of the date of this news release and, accordingly, is subject to change after such date. Readers should not place undue importance on forward-looking information and should not rely upon this information as of any other date. While the Company may elect to, it does not undertake to update this information at any particular time except as required in accordance with applicable laws.
