

ROCKLAND RESOURCES LTD.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE COMPANY'S FINANCIAL CONDITION AND RESULTS OF OPERATIONS FOR THE NINE MONTHS ENDED JUNE 30, 2022

August 29, 2022

This Management Discussion and Analysis ("MD&A") of Rockland Resources Ltd. ("Rockland" or the "Company") has been prepared by management as of August 29, 2022 and should be read together with the unaudited financial statements and related notes for the nine months ended June 30, 2022 and the audited financial statements for the year ended September 30, 2021 which are prepared in accordance with International Financial Reporting Standards ("IFRS"). Unless otherwise indicated, all \$ dollars amount referenced in this MD&A are in Canadian dollars.

FORWARD LOOKING STATEMENTS

The information set forth in this MD&A contains statements concerning future results, future performance, intentions, objectives, plans and expectations that are, or may be deemed to be, forward- looking statements. These statements concerning possible or assumed future results of operations of the Company are preceded by, followed by or include the words 'believes,' 'expects,' 'anticipates,' 'estimates,' 'intends,' 'plans,' 'forecasts,' or similar expressions. Forward-looking statements are not guarantees of future performance. These forward-looking statements are based on current expectations that involve numerous risks and uncertainties. Assumptions relating to the foregoing involve judgments with respect to, among other things, future economic, competitive and market conditions and future business decisions, all of which are difficult or impossible to predict accurately and many of which underlying the forward-looking statements are reasonable, any of the assumptions could prove inaccurate. These factors should be considered carefully, and readers should not place undue reliance on forward-looking statements. The Company may not provide updates or revise any forward-looking statements, except those otherwise required under paragraph 5.8(2) of NI 51-102, whether written or oral that may be made by or on the Company's behalf.

OVERALL PERFORMANCE

The Company is engaged in the business of mineral exploration.

The Company's head office is located at #1240 – 789 West Pender Street, Vancouver, British Columbia, V6C 1H2, and its registered and records office is located at #2600 – 1066 West Hastings Street, Vancouver, B.C. V6E 3X1. The Company was incorporated under the Business Corporations Act (British Columbia) on April 29, 2020.

RESULTS OF OPERATIONS

The Company is an exploration stage mineral resources company and does not have any revenues from operations.

As at June 30, 2022, the Company had total assets of \$4,392,687 (September 30, 2021 – \$2,757,373). As at June 30, 2022, the Company had current liabilities of \$88,126 (September 30, 2021 - \$283,375).

Nine months ended June 30, 2022 compared to nine months ended June 30, 2021

During the nine months ended June 30, 2022, the Company reported a net loss of \$557,342 (2021 - \$793,856). An explanation of some of the significant differences between the current and comparative period is as follows:

- i) Consulting fees were \$131,985 (2021 - \$68,000). The increase was due to higher activities in current period.
- ii) Filing and transfer agent fees were \$14,535 (2021 - \$28,494). The decrease was due to completion of the initial public offering during the comparative period.
- iii) Management fees were \$108,000 (2021 - \$73,500). The increase was due to fees paid to a related party during the current period.
- iv) Professional fees were \$66,815 (2021 - \$40,159). The increase was due to increased legal fees related to corporate administrative work during the current period.
- v) Share-based payments were \$110,500 (2021 - \$519,000). The decrease was due to less stock options being granted during the current period.
- vi) Travel and promotion were \$98,581 (2021 - \$38,281). The increase was due to the Company's efforts to increase market awareness during the current period.

Three months ended June 30, 2022 compared to three months ended June 30, 2021

During the three months ended June 30, 2022, the Company reported a net loss of \$164,396 (2021 - \$638,825). An explanation of some of the significant differences between the current and comparative period is as follows:

- i) Consulting fees were \$30,049 (2021 - \$42,000). The decrease was due to first nations consultation services received in comparative period.
- ii) Filing and transfer agent fees were \$3,325 (2021 - \$5,325). The decrease was due to completion of the initial public offering during the comparative period.
- iii) Management fees were \$36,000 (2021 - \$54,000). The decrease was due to additional fees paid to a related party during the comparative period.
- iv) Professional fees were \$15,212 (2021 - \$1,365). The increase was due to higher audit fees paid during the current period.
- v) Share-based payments were \$Nil (2021 - \$501,239). The decrease was due to no stock options being granted during the current period.
- vi) Travel and promotion were \$67,438 (2021 - \$38,281). The increase was due to the Company's efforts to increase market awareness during the current period.

SUMMARY OF QUARTERLY RESULTS

Three Months Ended	June 30, 2022	March 31, 2022	December 31, 2021	September 30, 2021
Net loss for the period	\$ 164,396	\$ 249,646	\$ 143,300	\$ 162,721
Loss per Share	(0.01)	(0.01)	(0.00)	(0.01)

Three Months Ended	June 30, 2021	March 31, 2021	December 31, 2020	September 30, 2020
Net loss for the period	\$ 638,825	\$ 118,161	\$ 36,870	\$ 20,989
Loss per Share	(0.02)	(0.01)	(0.00)	(0.00)

During the quarter ended June 30, 2022, net loss decreased to \$164,396 (March 31, 2022 - \$249,645) significant costs were Professional fees of \$15,212 and Travel and promotion of \$67,438.

During the quarter ended March 31, 2022, net loss increased to \$249,646 (December 31, 2021 - \$143,300) significant costs were Professional fees of \$42,103 and Share-based payment of \$62,900 related to the granting of stock options to consultants.

During the quarter ended September 30, 2021, net loss decreased to \$162,721 (June 30, 2021 - \$638,825) significant costs were travel and promotion for \$81,943 due to the Company's efforts to increase market awareness during the quarter.

During the quarter ended June 30, 2021, net loss increased to \$638,825 (March 31, 2021 - \$118,161) due to share-based payments related to the granting of stock options to senior officers, directors, and consultants.

During the quarter ended March 31, 2021, net loss increased to \$118,161 (December 31, 2020 - \$36,870) due to the acquisition of the Cole Gold Mine property during the quarter.

EXPLORATION AND PROJECTS

The principal asset of the Company is its option to acquire up to a 75% interest in the Summit Old Timer Property, a gold prospect.

Summit Old Timer Property

On May 21, 2020 the Company entered into an agreement to acquire, in aggregate, up to a 75% interest in three mining claims in the Nelson Mining Division, British Columbia. To acquire a 51% interest, the Company issued 100,000 common shares (issued for \$2,000) and made a cash payment of \$5,000 to the vendor.

To earn a further 24% (for a total of 75%), the Company must pay the vendor \$10,000 on or before May 21, 2021 (paid), issue 100,000 common shares (issued and valued at \$15,000) on or before the first anniversary of the initial listing of the Company's shares on an exchange, and incur aggregate exploration expenditures of \$225,000 of which \$75,000 must be incurred before May 21, 2021 (incurred) and \$150,000 on or before the first anniversary of the initial listing of the Company's shares on an exchange (incurred \$117,794).

The Property is subject to a net smelter royalty of 2% payable to the vendors, of which 1% can be repurchased for a cash payment of \$1,000,000.

The Property is located in southern of British Columbia, approximately 17 kilometers southeast of Nelson, British Columbia. The Property consists of three mineral claims and covers an area of 1,915 hectares.

The Property is situated at the northern-most part of Ymir Camp which hosts several known gold-bearing quartz veins. Since 1980, numerous exploration programs have been conducted on the area including geological mapping, geochemical and soil sampling, induced polarization (IP) surveying, diamond drilling, airborne magnetometer and VLF-EM surveying.

An independent geological report (the "Technical Report") prepared by Linda Caron, M.Sc., P. Eng., who is a

“Qualified Person” as defined in National Instrument 43-101 – Standards of Disclosure for Mineral Projects (“NI 43-101”), was completed in relation to the Property on December 2, 2020. The Technical Report recommends that the Company conduct a two phase exploration program comprised of: phase one, a Lidar survey coupled with a surface exploration program, geological mapping, rock and soil sampling, and 3D modelling; and phase two consisting of a drilling program and surface exploration to further assess or expand on phase one.

Future Plans

In relation to the Property, the Company currently plans to follow recommendations made in the Technical Report. The Technical Report recommends that the Company conduct a two-phase exploration program comprised of: Phase 1, Lidar survey coupled with a surface exploration program which includes road rehabilitation, geological mapping, rock and soil sampling, and 3D modelling; and Phase 2 consisting of a drilling and field work program to further assess and examine results from Phase 1. The estimated budget for Phase 1 is \$100,000, and the estimated budget for Phase 2 is \$270,000. The Company will make a decision regarding whether to proceed with Phase 2 based on the results from Phase 1.

On December 16, 2021, the Company executed an option agreement with Silverfish Resources Inc. (“Silverfish”) to acquire the Company’s 75% interest in the Summit Old Timer Property in consideration of the following:

Cash payments:

- i) \$7,500 on or before the earlier of the listing of Silverfish’s common shares on the Canadian Securities Exchange or June 30, 2022 (received)
- ii) \$15,000 on or before December 15, 2022
- iii) \$50,000 on or before December 15, 2023

Share issuances:

- i) 100,000 common shares on or before the earlier of the listing of Silverfish’s common shares on the Canadian Securities Exchange or June 30, 2022 (subsequently agreed to wait until the listing of Silverfish’s common shares)
- ii) 250,000 common shares on or before December 15, 2022
- iii) 1,000,000 common shares or before December 15, 2023

Expenditures:

- i) \$100,000 on or before September 30, 2022
- ii) additional \$250,000 on or before September 30, 2023
- iii) additional \$1,000,000 on or before September 30, 2024

The agreement is subject to a 2% Net Smelter Royalty (NSR) in favour of the underlying vendor, and to a 2 km Area of Interest.

Cole Gold Mines Property, Ontario

On March 25, 2021, the Company entered into an option agreement to acquire a 100% interest in 28 mining claims (568 ha) located in the Ball Township, Red Lake Mining District, Ontario. The property is being acquired from Wabassi Resources ULC who has the option to acquire 100% interest from the underlying property owners.

Terms of the agreement include:

Cash payments:

- i) \$10,000 upon execution of the agreement (paid);
- ii) \$50,000 on or before April 30, 2021 (paid);
- iii) \$100,000 on or before August 7, 2021 (paid);
- iv) \$150,000 on or before March 25, 2022 (see below);
- v) \$100,000 on or before August 7, 2022 (paid).

Share issuances:

- i) 1,071,428 shares on or before April 30, 2021 (issued and valued at \$257,143);
- ii) \$100,000 worth in common shares on or before August 7, 2021 (480,769 shares issued);
- iii) \$100,000 worth in common shares on or before August 7, 2022 (480,769 shares issued).

Expenditures:

- i) \$100,000 on or before August 7, 2021 (incurred);
- ii) \$200,000 on or before August 7, 2022 (incurred).

The Company intended to conduct a drill program on the property in June 2021 that was delayed due to forest fires west of Red Lake.

The Property is subject to a net smelter royalty of 2% payable to the vendors, of which 0.5% can be repurchased for a cash payment of \$750,000.

The second payment has been deferred with the agreement of the Property vendors pending a decision by the Company on a 2022 exploration program on the Property.

On March 31, 2022, the Company reported assay results for the Company's inaugural drill program at the Cole Gold Mines Property, Red Lake Mining Division, Ontario. The program consisted of 5 NQ core holes for a total of 996 metres that targeted quartz veins and shear structures with quartz-sericite-sulphide alteration.

Drill results – Highlights from the program include the intersection of the gold mineralized quartz vein system developed by the historical Cole Gold Mines underground workings (Vein #1) and newly-discovered footwall gold mineralization in rhyolite with strong biotite, garnet, silica alteration and associated sulphides. Gold (Au) is reported in grams/tonne (g/t) in Table 1.

Hole RL-CP-02 intersected 0.5 m at 4.9 g/t Au in Vein #1 and 2.5 m at 3.6 g/t Au including 0.5 m at 10.9 g/t in the Footwall Zone.

Table 1. Cole Gold Property, 2021 Drill Program, Intersections with > 2 g/t Au,

Hole ID	Zone	Az/Dip	From (m)	To (m)	Interval (m)	Au (g/t)
RL-CP-01	Footwall	180°/-55°	179.5	180.0	0.5	3.1
RL-CP-02	Vein #1	180°/-57°	121.0	121.5	0.5	4.9
And	Footwall		183.7	186.2	2.5	3.6
Incl	Footwall		183.7	184.2	0.5	10.9
RL-CP-04	Vein #1	180°/-56°	111.5	112.0	0.5	3.0
RL-CP-05	Vein #1	180°/-58°	79.0	79.5	0.5	2.2
<i>Hole RL-CP -03 did not intersect values >2 g/t Au</i>						

The current drilling program targeted the quartz veins and related structures that were developed underground by Cole Gold Mines Ltd. in the 1930s. Drill targeting was based on historical plans of the underground workings that show the gold mineralized veins follow east-west striking shear structures that dip at approximately 65° north. The primary target was the Cole Property "discovery" vein that is identified as Vein #1 on government maps. Surface exposure of Vein #1 is currently covered by waste rock from underground development. Holes RL-CP-01 and -02 were drilled on a section approximately 75 m east of the Cole shaft. Holes RL-CP-03, -04 and -05 were drilled approximately 50 m east of the shaft.

In all of the drilled holes, the Vein #1 target is associated with quartz veins and sulphide mineralization in a rhyolite host rock that displays strong biotite, garnet, and silica alteration. Trace element analysis indicates the alteration is associated with strong Potassium (K) and Barium (Ba) enrichment. The immediate footwall of the Vein #1 target is well-defined by a shear zone and serpentinized ultramafic rocks. The two initial holes reported here returned low to moderate grade gold values from this target with the best intersection being 4.9 g/t Au over 0.5 m in RL-CP-02.

As a consequence of prospective geology in the footwall of the Vein #1 target, the holes were continued for approximately 50 m deeper than originally planned. Assay results from the lower portions of the first two holes have resulted in discovery of a new zone of footwall gold mineralization. The footwall mineralization is located 45 to 50 m below the Vein #1 target. This footwall zone provided the best intersection of the results reported here with 0.5 m at 10.9 g/t in hole CP-02 in a wider mineralized interval. This mineralization is hosted by altered rhyolite immediately below the contact with a gabbro intrusion.

In addition to the drill results, the Company has received assays on 157 surface channel samples with a nominal length of 50 cm from 6 outcrops in the hangingwall of the #1 vein. Channel sampling identified gold mineralized quartz veins in several locations associated with sericite-sulphide-silica alteration in sheared rhyolite. The best result was 7.7 g/t Au over 0.5 m with 2 other samples returning over 5 g/t Au. Additionally, the Company is pleased to report that surface grabs from quartz veins on the south shore of the small lake 1 km SW of Cole assayed up to 6.0 g/t Au. This is a new gold showing that warrants further exploration.

Based on these results the Company is currently evaluating plans for a follow up program in the 2022 field season. The Company is encouraged by the association of gold values with well developed silica-sericite-sulphide-garnet alteration and K, Ba enrichment.

Stetham Uranium Project (Ontario)

On September 19, 2021, the Company entered into an option agreement to acquire 100% interest in the Stetham Uranium project located near the town of Gogama, Ontario.

To acquire 100% interest, the Company is required to issue 1,200,000 common shares as follows:

- i) 600,000 common shares on or before September 19, 2021 (issued and valued at \$90,000)
- ii) 600,000 common shares on or before September 19, 2022

A 2% NSR will be granted to the vendors and the Company will have an option to purchase 50% of the NSR for \$1,000,000 at any time.

On March 31, 2022, the Company reported that five grab samples from the Stetham Uranium Project, near Gogama, Ontario, have returned anomalous Uranium (U) values with the best sample being a syenite pegmatite that assayed 622 ppm U and 623 ppm Molybdenum (Mo). These U results are consistent with historical drilling intercepts. Grab samples were analyzed at ActLabs, Ancaster, Ontario using INAA for U. The Company will conduct additional field work to follow up on this results in the coming field season.

Elektra Project (Mexico)

On September 19, 2021, the Company entered into an option agreement to acquire 100% interest in the Elektra project located in northern Sonora, Mexico.

To acquire 100% interest, the Company is required to meet the following obligations:

Cash

- i) USD 40,000 upon the execution of the agreement (paid)
- ii) USD 30,000 on or before May 14, 2022 (see below)
- iii) USD 30,000 on or before November 14, 2022
- iv) USD 30,000 on or before May 14, 2023
- v) USD 30,000 on or before November 14, 2023
- vi) USD 30,000 on or before May 14, 2024
- vii) USD 30,000 on or before November 14, 2024
- viii) USD 30,000 on or before May 14, 2025
- ix) USD 1,250,000 on or before November 14, 2025

Share issuances

- i) 4,000,000 upon the execution of the agreement (issued and valued at \$780,000)
- ii) 2,000,000 on or before November 14, 2022
- iii) 2,000,000 on or before November 14, 2023
- iv) 2,000,000 on or before November 14, 2024

A 2% NSR will be granted to the vendors and the Company will have an option to purchase 50% of the NSR for USD \$1,000,000 at any time.

In connection with the agreement, the Company shall pay a finder fee equal to 7% of the acquisition price over the same 48-month period. During the period ended March 31, 2022, the Company paid \$3,644 (\$2,800 USD) and issued 280,000 shares valued at \$67,200 for finder's fee.

The Company has decided to defer any further option payments until the Company has clarity on the Mexican nationalization legislation.

Lithium Butte Project (USA)

Rockland can acquire an initial 90% interest in the original Lithium Butte property (60 claims - 1,200 acres) by covering the staking and filing costs (paid), with the remaining 10% interest held by an arms-length third party. The additional claims that have been staked by Rockland are owned 100% by the Company. There is a 1.5% Net Smelter Royalty ("NSR") payable to the same arms-length third party on both the original Lithium Butte property and all claims being acquired in the area. Rockland has the right to buy back a half percent of the NSR to reduce it to 1% at any time for \$1,000,000 Cdn. A finder's fee may be payable on the Lithium Butte acquisition, with any share compensation subject to a four-month-and-one-day hold period

Rockland has an initial 90% interest in the original Lithium Butte property (60 claims - 1,200 acres) with the remaining 10% interest held by an arms-length third party. All remaining claims were staked by Rockland and are owned 100% by the Company. There is a 1.5% Net Smelter Royalty ("NSR") payable to the same arms-length third party on both the original Lithium Butte property and all claims being acquired in the area.

On June 29, 2022, the Company reported that the Company has acquired the Lithium Butte Property located in the Basin and Range Province of west-central Utah, USA. Rockland representatives recently took grab samples that have resulted in assays returning up to 4,080 ppm lithium from claystones derived from rhyolite tuff-breccia on the newly acquired Lithium Butte Property.

Ten grab samples from the property were taken on a reconnaissance sampling program in May 2022. All of the grab samples are from a rhyolite tuff-breccia unit of Tertiary age that is known to contain elevated Lithium contents. Five grab samples of the tuff-breccia that had strongly developed clay alteration assayed from 4,080 ppm lithium to 1,200 ppm lithium with an average of 2,142 ppm lithium. The five samples were taken from an outcropping exposure of clay altered tuff-breccia with a stratigraphic thickness estimated to be greater than 20 m. The exposure contains at least two intervals of claystone mineralization, each of which is several meters in thickness.

The Lithium Butte Property consists of 60 lode claims on BLM lands covering approximately 1,200 acres (486 ha) in west central Utah. The Lithium Butte Property will be part of a regional lithium exploration program that Rockland is developing in Utah. The Company is currently staking additional claims and will provide additional Property details once staking has been completed.

Rockland has acquired a 90% interest in the original Lithium Butte property (60 claims - 1,200 acres) by covering the staking and filing costs (paid), with the remaining 10% interest held by an arms-length third party. All remaining claims being staked by Rockland are owned 100% by the Company. There is a 1.5% Net Smelter Royalty ("NSR") payable to the same arms-length third party on both the original Lithium Butte property and all adjoining claims being acquired in the area.

Assay Program QA/QC – Initial grab sampling at Lithium Butte was carried out by Dr. Richard Sutcliffe, P. Geo., a Qualified Person as defined in NI43-101, who is also responsible for reviewing and approving the geological contents of this news release as they pertain to the Lithium Butte Claystone Property.

Samples were transported in sealed bags by the QP to Activation Laboratories ("Actlabs") in Ancaster, Ontario. Actlabs is an independent ISO/IEC 17025 certified laboratory. Li analysis was performed using sodium peroxide fusion and inductively coupled plasma mass spectrometry (ICP-MS).

On July 20, 2022, the Company reported that the Company has recently staked an additional 464 lode claims on the Lithium Butte Property in Juab County, Utah, USA. Including the original 60 claims, the Property now comprises a total of 524 claims with an area of 10,670 acres (4,320 ha). On June 29, 2022, the Company reported grab samples that contained up to 4,080 ppm lithium in claystones derived from rhyolite tuff-breccia on the Property (see Rockland June 29, 2022 press release). Rockland has initiated a soil sampling program to follow up on the grab sample results to determine the areal extent of claystone lithium mineralization and define additional exploration targets. The Lithium Butte Property is in the Basin and Range geological province of west-central Utah and is well situated 185 km southwest of Salt Lake City.

Figure 1. Location map of the Lithium Butte property

Rockland obtained five grab samples of clay altered rhyolite tuff breccia from the property that assayed from 4,080 ppm lithium to 1,200 ppm lithium with an average of 2,142 ppm lithium. The soil sampling program will cover the 10,670 acre property with an estimated 995 soil samples taken at 150 m intervals on east-west lines spaced at 300 m for a total of 145.5 line-km of sampling. Samples will initially be analyzed in the field by handheld Laser Induced Breakdown Spectroscopy (LIBS) capable of light metal detection. Results of the survey are anticipated in early autumn

and expected to generate lithium exploration targets for follow up drilling. Work on the property by previous operators including Redhill Resources Corp. in 2011 and Anaconda Copper Mining Company did not focus on lithium.

In addition to the soil sampling program, Rockland will channel sample the outcropping exposure of clay altered tuff-breccia where the previously reported grab samples were obtained. The exposure has a stratigraphic thickness estimated to be greater than 20 m and contains at least two intervals of claystone mineralization, each of which is several meters in thickness. Samples will be analyzed for Li and other elements at an independent assay laboratory using sodium peroxide fusion and inductively coupled plasma mass spectrometry (ICP-MS).

On August 4, 2022, the Company reported additional grab sample assay results from the Lithium Butte Property in Juab County, Utah, USA, that show significant beryllium concentrations with values up to 4,810 ppm beryllium. The Lithium Butte Property is located in the Basin and Range geological province of west-central Utah and is interpreted to be significantly prospective for lithium (Li) and beryllium (Be) mineralization hosted in claystone volcanic tuff-breccia units. The Company has staked an additional 27 claims (540 acres) at the Lithium Butte property bringing the total number of claims to 551 claims or 11,020 acres (4,460 ha).

Ten grab samples from the property were taken on a reconnaissance sampling program in May, 2022. Three of the grab samples returned significant beryllium concentrations with assays of 4,810 ppm Be, 4,290 ppm Be, and 1,790 ppm Be. These samples also contain anomalous Li with 380 ppm Li, 440 ppm Li, and 402 ppm Li respectively. The Be-mineralized samples were collected from an outcrop of bedded tuff-breccia approximately 340 meters east-southeast of the claystone tuff-breccia samples that contained previously reported high lithium values ranging from 4,080 ppm to 1,200 ppm Li.

Company personnel have recently conducted additional sampling from the clay altered rhyolite tuff breccia that returned the lithium assays up to 4,080 ppm lithium. The exposure has a stratigraphic thickness estimated to be greater than 20 meters and contains at least two intervals of claystone mineralization, each of which is several meters in thickness. Channel sampling was conducted across the stratigraphic section and along strike on an exposed dozer road cut. A total of 24 additional samples including 20 channel samples have been submitted to ActLabs laboratory for multi-element analysis using sodium peroxide fusion and inductively coupled plasma mass spectrometry (ICP-MS).

The geochemical soil sampling program previously announced has been completed, involving approximately 1,000 soil samples taken at 150 meter intervals on east-west lines spaced at 300 meters for a total of 145.5 line-km of sampling, over the entire Lithium Butte property. North American Exploration of Layton, Utah was retained to complete the geochemical soil sampling program. A handheld Laser Induced Breakdown Spectrometer (LIBS) capable of light metal detection (including lithium and beryllium) has been purchased from SciAps Inc., of Woburn, MA, and is currently being shipped to the property. The soil and rock samples from the property will be scanned using the LIBS instrument to fast-track the identification of anomalous targets, for additional exploration and drill targeting.

Idaho based geologist, Travis Fisher is welcomed to the team and will lead the Utah exploration program as Project Manager. The Company is in the process of leasing a house/warehouse in the area to be used by additional Company personnel and contractors, and to serve as a sample preparation/analysis facility. Previous exploration on the Lithium Butte property focused on uranium in the 1950s and late 1970's, and in the 2010-2011 period on beryllium (Be), rubidium (Rb) and rare earths (REE). Lithium values from 2010 of the altered rhyolite tuff breccia returned up to 1690 ppm Li, and anomalous lithium (+300 ppm Li) values in rock and soil samples extend over an area 2.0 kilometres east-west, by 1.0 kilometres north-south. The current soil samples will significantly extend the previous survey area.

About Beryllium - Beryllium is a strong, light weight metal with atomic number 4. Beryllium is considered a critical mineral by both the Canadian and US governments. In particular, beryllium is very strong for its weight and is good at holding its shape across a range of temperatures. Beryllium metal is used for lightweight structural components in the defense and aerospace industries including high-speed aircraft, spacecraft and satellites. The metal's characteristics resulted in the recent application of beryllium to construct the mirrors of the James Webb Space Telescope.

On August 23, 2022, the Company reported encouraging assay results on channel samples from lithium-mineralized claystones on the Lithium Butte Property in Juab County, Utah, USA. Channel samples returned a continuous interval of 25.2 metres at 1,388 parts per million ("ppm") lithium ("Li") including 8.0 metres at 2,155 ppm Li, and 0.7 metres at 3,540 ppm Li.

The 4,460 ha (11,020 acre) Lithium Butte Property is located in the Basin and Range geological province of west-central Utah and is interpreted to be highly prospective for lithium (Li) and beryllium (Be) mineralization hosted in claystone volcanic tuff-breccia units.

Twenty-one (21) channel samples were taken from an exposed outcropping of claystone on the Property in July 2022. Fifteen (15) channel samples with lengths from 1.0 to 2.0 m were taken from a single stratigraphic section of claystone exposed beneath the rhyolite cap rock that forms the top of the exposed butte. The total length of the main channel section (15 samples) is 27.0 m. True stratigraphic thickness is estimated at approximately 70% of the channel length. This main channel section returned 25.2 m at 1,388 ppm Li. The lower portion of the mineralized section returned a higher-grade interval of 8.0 m at 2,155 ppm Li. The sampled section represents the upper part of the prospective unit and the mineralization is open at depth. Sample locations are illustrated in Figures 1 and 2.

Additionally, two shorter channel sections, each with 3 channel samples, were taken over the exposed outcrop of the prospective unit, from 15 m northwest and 28 m southeast along strike from the main channel. These shorter sections returned 1,732 ppm Li over 1.25 meters and 1,925 ppm Li over 1.7 meters, respectively. The shorter channels indicate Li claystone mineralization over a strike length of at least 43 m with mineralization being open along strike and below the channels. The southeast channel section contained the highest-grade lithium mineralization in this sampling program with 0.7 m grading 3,540 ppm Li.

LIQUIDITY AND CAPITAL RESOURCES

The Company's ability to continue as a going concern is therefore dependent on its ability to raise additional funds through equity issuances. These material uncertainties may cast significant doubt on the entity's ability to continue as a going concern.

The financial statements for the period ended June 30, 2022 were prepared on a going concern basis which assumes that the Company will be able to realize its assets and discharge its liabilities in the normal course of business for the foreseeable future. The continuing operations of the Company are dependent upon its ability to continue to raise adequate financing and to commence profitable operations in the future. The condensed interim consolidated financial statements do not include any adjustments relating to the recoverability and classification of recorded assets and liabilities that might be necessary should the Company be unable to continue as a going concern.

The Company reported working capital of \$1,603,542 and cash of \$1,641,573 as at June 30, 2022. Current liabilities as at June 30, 2022 consisted of accounts payable and accrued liabilities of \$75,124, and amount due to related parties of \$13,002.

During the period the Company issued a total of 200,000 common shares pursuant to the exercise of stock options at \$0.10 for total proceeds of \$20,000. The fair value of \$8,200 was transferred from stock-based reserve to share capital. The weighted average trading price on the date of exercise was \$0.245.

On October 6, 2021, the Company issued 120,000 common shares pursuant to an exercise of warrants at a price of \$0.10 for total proceeds of \$12,000. The fair value of \$9,689 was transferred from warrant reserves to share capital.

On October 18, 2021, Company issued 600,000 common shares valued at \$90,000 pursuant to the acquisition of Stetham Uranium Project.

On November 9, 2021, Company issued 100,000 common shares valued at \$15,000 pursuant to the acquisition of

Old Timers Property.

On November 16, 2021, Company issued 4,000,000 common shares valued at \$780,000 pursuant to the acquisition of Elektra Project.

On November 26, 2021, the Company issued 89,250 common shares pursuant to an exercise of warrants at a price of \$0.10 for total proceeds of \$8,925. The fair value of \$7,207 was transferred from warrant reserve to share capital.

On November 29, 2021, Company issued 280,000 common shares valued at \$67,200 as finder's fee for the Elektra Project.

On December 1, 2021, the Company issued 200,000 common shares pursuant to an exercise of options at a price of \$0.10 for total proceeds of \$20,000. The fair value of \$8,200 was transferred from stock-based reserves to share capital.

On December 1, 2021, the Company granted 350,000 stock options exercisable at a price of \$0.25 until December 1, 2022 to consultants of the Company.

On January 17, 2022, the Company granted 400,000 stock options exercisable at a price of \$0.25 until January 17, 2024 to consultants of the Company.

On February 3, 2022, the Company issued 88,000 common shares pursuant to an exercise of warrants at a price of \$0.10 for total proceeds of \$8,800. The fair value of \$7,106 was transferred from warrant reserve to share capital.

On February 23, 2022, the Company issued 6,530,000 units at a price of \$0.20 per unit for gross proceeds of \$1,306,000. Each unit is comprised of one common share and one-half transferable share purchase warrant. Each whole warrant will entitle the holder to purchase one share for \$0.30 until February 23, 2024. Finders' fees of \$30,520 in cash and 152,600 finder's warrants (valued at \$19,700) with terms the same as the private placement warrants.

On August 4, 2022, the Company granted 800,000 stock options exercisable at a price of \$0.20 until August 4, 2025 to senior officers, directors and consultants.

On August 8, 2022, the Company issued 480,769 common shares valued at \$72,115 pursuant to the acquisition of Cole Gold Mine Property.

The Company has limited working capital to continue administrative operations and development of its exploration asset and may continue to have capital requirements in excess of its currently available resources. The Company intends to raise additional financing either privately or through a public financing. There can be no assurance that the Company will have sufficient financing to meet its future capital requirements or that additional financing will be available on terms acceptable to the Company in the future.

OFF-BALANCE SHEET ARRANGEMENTS

The Company does not utilize off-balance sheet arrangements.

RELATED PARTY TRANSACTIONS

Key management compensation

Key management personnel include those persons having authority and responsibility for planning, directing and controlling the activities of the Company as a whole. The Company has determined that key management personnel consist of members of the Company's Board of Directors and corporate officers.

The remuneration of directors and key management personnel made during the period are as follows:

	Period ended June 30, 2022	Period ended June 30, 2021
Consulting fee	\$ 9,000	\$ 1,000
Exploration services	87,975	11,812
Management fee	108,000	73,500
Professional fee	-	8,500
Office rent and services	-	12,000
Share based payment	-	168,033
Total	\$ 204,975	\$ 274,845

As at June 30, 2022, the Company has \$13,002 (September 30, 2021 - \$1,855) due to a senior officer and a company controlled by a dependent of a director of the Company.

Amounts due to related parties are non-interest bearing with no specific terms of repayment.

FINANCIAL INSTRUMENTS AND OTHER INSTRUMENTS

The carrying amounts of cash and accounts payable approximate fair value because of the short-term maturity of these items.

MANAGEMENT'S RESPONSIBILITY FOR THE FINANCIAL STATEMENTS

The information provided in this report as referenced from the Company's financial statements for the referenced reporting period is the sole responsibility of management. In the preparation of the information along with related and accompanying statements and estimates contained herein, management uses careful judgement in assessing the values (or future values) of certain assets or liabilities. It is the opinion of management that such estimates are fair and accurate as presented.

OTHER REQUIREMENTS

Summary of Outstanding Securities as at August 29, 2022

Authorized: Unlimited number of common shares without par value.

Issued and outstanding: 38,605,217 Common Shares.

Options:

Number of Options	Exercisable Options	Exercise Price	Expiry Date
350,000	350,000	\$0.25	December 1, 2022
1,650,000	1,650,000	\$0.27	April 29, 2023
500,000	500,000	\$0.27	May 19, 2023
400,000	400,000	\$0.25	January 17, 2024
100,000	100,000	\$0.27	June 3, 2024
800,000	800,000	\$0.20	August 4, 2025

RISKS AND UNCERTAINTIES

The Company's principal activity is mineral exploration and development. Companies in this industry are subject to many and varied kinds of risks, including but not limited to, environmental, metal prices, political and economical. The Company has no producing properties, no significant source of operating cash flow and consequently no sales or revenue from operations. The Company has either not yet determined whether its mineral properties contain mineral reserves that are economically recoverable or where reserves have been determined, mining operations have not yet commenced. The Company has limited financial resources. Substantial expenditures are required to be made by the Company to establish reserves.

The property interests in whom the Company has an option to earn an interest are in the exploration stages only, are without and may not result in any discoveries of commercial mineralization, and have no ongoing mining operations. Mineral exploration involves a high degree of risk and few properties, which are explored, are ultimately developed into producing mines, the result being the Company will be forced to look for other exploration projects. The Company is subject to the laws and regulations relating to environmental matters in all jurisdictions in which it operates, including provisions relating to property reclamation, discharge of hazardous materials and other matters.

Additional disclosures pertaining to the Company's technical report, management information circulars, material change reports, press releases and other information are available on the SEDAR website at www.sedar.com.
