

FATHOM NICKEL INC.

MANAGEMENT'S DISCUSSION AND ANALYSIS

FOR THE THREE MONTHS ENDED

MARCH 31, 2023

(Expressed in Canadian Dollars)

Report Date – May 30, 2023

The following Consolidated Management's Discussion and Analysis ("MD&A") dated May 30, 2023 is in respect of the three-month period ended March 31, 2023 for Fathom Nickel Inc. ("Fathom" or the "Company"). It is management's assessment of the results of operations and financial condition of Fathom and should be read in conjunction with the unaudited condensed interim consolidated financial statements for the three-month period ended March 31, 2023 ("Q1-23"), together with the notes thereto. The Corporation's Q1 2023 unaudited condensed interim consolidated financial statements ("Q1-23 interim financial statements") have been prepared in accordance with International Financial Reporting Standards ("IFRS"). All dollar amounts are in Canadian dollars, unless otherwise noted.

The "Qualified Person" under the guidelines of National Instrument 43-101 of the Canadian Securities Administrators ("NI 43-101") for Fathom's Albert Lake exploration project as described in the following discussion and analysis is Ian Fraser, CEO and Vice-President, Exploration of the Company and a Professional Geologist Registered in the Provinces of Alberta, Saskatchewan and British Columbia.

This MD&A was approved by the board of directors of Fathom on May 30, 2023.

1. DESCRIPTION OF BUSINESS AND REPORTING ENTITY

The Company's wholly owned subsidiary, Fathom Minerals Ltd. ("FML") was incorporated pursuant to the Business Corporations Act (Alberta) as Cauca Gold Corp. on April 27, 2012 and changed its name to Fathom Minerals Ltd. on April 23, 2015. As described in Section 3 below, on January 22, 2021 Fathom acquired 100% of the issued and outstanding capital stock of FML in a share-for-share transaction. Based on the requirements of IFRS 2, the acquirer was determined to be FML and the transaction was accounted for as a reverse takeover ("RTO"). This MD&A is in respect of all entities in which FML has a controlling interest and the consolidated entity is referred to as (the "Company", "Fathom" or "FNI").

Since inception, the Company has been engaged in identifying, acquiring and exploring for base and precious metals in Canada, specifically targeting metals and minerals required to support the electric vehicle ("EV") and battery markets. The Company's current focus is the exploration and development of its two projects located in Saskatchewan, Canada: Albert Lake Project and Gochager Lake Project.

The Company is in the process of exploring for mineral deposits and has not yet fully determined whether its mineral property interests contain ore reserves that are economically recoverable. Accordingly, as is common with junior exploration companies, the Company is dependent upon obtaining necessary equity investments from time to time to finance its on-going and planned exploration activities and to cover administrative costs. The recoverability of amounts recorded as exploration and evaluation assets ("E&E asset") is dependent upon the discovery of economically recoverable reserves, confirmation of the Company's interest in the underlying mineral claims, and the future profitable production from the property or realizing proceeds from its disposition.

Fathom has not conducted any significant revenue generating operations to date. As at March 31, 2023, the Company had working capital of \$912,961 (including cash of \$524,211) and E&E assets of \$12,207,749.

The Company's shares are listed for trading on:

- the Canadian Securities Exchange ("CSE") under the trading symbol **FNI**.
- the Frankfurt Stock Exchange ("FSE") under the trading symbol **6Q5**.
- the OTCQB under the trading symbol **FNICF**.

2. HIGHLIGHTS OF THE QUARTER

Significant events occurring during the quarter ended March 31, 2023 included:

- a) On January 16, the Company announced the assay results from the October soil geochemistry work at the Tremblay-Olson Claims area within Albert Lake. Overall, the assays returned the highest level of metals-in-soil ever seen at the Albert Lake project. The assay results added to the building evidence in support of the prospectivity of the Tremblay-Olson Claims area.
- b) On March 14 the Company announced the addition of a 937-hectare mineral disposition at Mal Lake, within the Gochager Lake Project.
- c) On March 22, 2023 the Company announced the strategic acquisition of the Watts Lake Mineral Claims ("**Watts Lake**") pursuant to an agreement with SKRR Exploration Inc. ("**SKRR**"), dated March 21, 2023 (the "**Acquisition Agreement**"). Watts Lake consists of twenty-four (24) mineral claims totalling 13,708 hectares that are entirely contiguous with Fathom's Gochager Lake Property. The addition of Watts Lake brings Fathom's total land package at the Gochager Lake nickel project to 19,559 hectares. The acquisition of the Watts Lake mineral claims was strategic in that it includes greater coverage of a 2008 VTEM survey, flown in the Gochager Lake property area. The acquisition also makes the Mal Lake nickel occurrence, 10 km southeast of the Gochager Lake deposit, contiguous with the Gochager Lake area.
- d) The Company completed exploration programs at both Gochager Lake and Albert Lake during the quarter. See Section 4 for a detailed description of the programs and results.
- e) Subsequent to the quarter end, on the date of this MD&A, on May 30, 2023 the Company closed the first tranche of a non-brokered private placement offering of flow through units and non-flow through units (the "Offering"). Under the Offering the Company issued 5,266,000 flow-through common units (the "FT Units") at a price per FT Unit of \$0.155 (the "FT Price") for gross proceeds of \$816,230, and 4,742,000 non-flow through Units (the "NFT Units") at a price per NFT Unit of \$0.135 (the "NFT Price") for gross proceeds of \$640,170. Combined gross proceeds of the offering was \$1,456,400.

As consideration for services in connection with the Offering, the Company has paid to certain qualified ("Finders") a cash commission of \$63,9450 and 439,800 broker warrants ("Broker Warrants"). Each Broker Warrant will entitle the holder thereof to acquire one common share of the Company at a price of \$0.155 for a period of 24 months from the Closing Date.

3. REVERSE TAKEOVER OF THE COMPANY

Pursuant to a Share Purchase Agreement (the "SPA") dated January 6, 2021, the Company agreed to acquire 100% of the issued and outstanding common shares of FML via a share-for-share exchange (the "Transaction"). Each former shareholder of FML shareholder received one (1) share of the Company in exchange for each share of FML beneficially owned. As Fathom was an entity with no operations, it did not meet the definition of a business under IFRS 3. Accordingly, the Transaction is accounted for as a reverse acquisition along with a share-based payment in accordance with IFRS 2. The Transaction closed on January 22, 2021, resulting in the issuance of 13,295,037 to shareholders of the Fathom. Immediately upon closing of the Transaction, there were 25,790,075 shares outstanding of which former shareholders of FML held 48.4%. After the Transaction, the Management and Directors of FML were appointed to their respective Board and Management positions with the Company. As a result, the acquirer, based on the requirements of IFRS 2, is determined to be FML. The shares issued to former shareholders of the FNI were valued at a price of \$0.20/share for a total transaction value of \$2,659,007. The fair value of the Company was determined based on the number of shares issued to former shareholders of the FNI at a price of \$0.20/share.

\$2,659,007 has been allocated as follows:

Accounts payable and accrued liabilities	\$ (13,138)
Finance expense	<u>2,672,145</u>
	<u>\$ 2,659,007</u>

Consideration comprised of:

Fair value of common shares	<u>\$ 2,659,007</u>
-----------------------------	---------------------

4. RESOURCE PROPERTIES

4.A Albert Lake Project (Formerly Rottenstone Property)

The Albert Lake Project comprises 31 mineral claims covering an aggregate area of 90,460 hectares located in the La Ronge Mining District of Saskatchewan, approximately 135km north-northeast of the town of La Ronge. The project consists of a past producer (Rottenstone Mine) of nickel-copper-platinum group elements (Ni, Cu, PGE) and is defined as a modern exploration project. The center of the property is located at 104° 49' 33" longitude west and 56° 20'39" latitude north.

Geological Setting and History

The Albert Lake property lies within the Rottenstone Domain of the Proterozoic Trans-Hudson orogenic belt. The Trans-Hudson Orogen is a major orogenic belt that stretches from the United States through Canada and extends to Greenland and defines the boundary between the Hearne and Superior cratons. The Rottenstone Domain is a broad belt of early to late syntectonic, northeast trending arcuate tonalite to granite intrusive rocks with associated injection migmatites.

The Albert Lake Project geology is dominated by a northeast striking, northwest dipping meta-tonalite-trondhjemite-pelitic migmatite complex of Paleoproterozoic age. MacLachlan (2003, 2005) divided the immediate Albert Lake property area into granitoids and supracrustal rocks. The supracrustal rocks; the

FATHOM NICKEL INC.
Management's Discussion and Analysis
Three Months Ended March 31, 2023

oldest rocks occurring on the Albert Lake property, include pelite, psammite, migmatitic, psammitic to pelitic metasedimentary rocks, layered calc-silicate, melanocratic biotite-hornblende-plagioclase rich metasedimentary/metavolcanic rocks, along with amphibolite. The ultramafic intrusions, host to the Rottenstone deposit and other known ultramafic occurrences occur within metasedimentary rocks (the supracrustal rocks).

The Rottenstone deposit would appear to be typical of a deep-rooted, mantle derived, magmatic Ni-Cu+PGE ultramafic hosted, sulphidic type of mineral deposit. The Rottenstone deposit hosts rich concentrations of PGE's, among the richest of any deposit of its type mined in Canada. It has been suggested that up to 50% of the host ultramafic intrusion consisted of sulphides and that the intrusion is the result of a significant magma chamber at depth within the vicinity of the Rottenstone deposit.

Exploration at the Albert Lake Project dates back to 1929, when the original Rottenstone outcrop was discovered on the shores of Rottenstone Lake. There was very intermittent exploration from 1929 through the early 1960s. The Rottenstone Mine was put into production based on a non-compliant resource estimate of 45,000 tons of 2% Ni, 1% Cu and 5.5 g/t Pt-Pd. Approximately 26,000 tonnes of material was mined at reported grades of 3.28% nickel, 1.83% copper and 9.63 g/t platinum-palladium + gold¹. From 1970 to 2015 limited exploration was undertaken by various exploration companies.

Acquisition by Fathom

Rights to the Albert Lake Project were acquired by Fathom in June 2015 through two separate Purchase and Sale Agreements. Each Purchase and Sale Agreement contained a provision for net smelter return royalty ("NSR"). In January 2022 (subsequent to year end), Fathom acquired one of NSR's for a cash payment of \$175,000 (See Notes 7 and 15 of the 2021 audited consolidated financial statements). The second NSR remains in place. It provides a 1% NSR royalty over 2 claims totaling 856 Ha (<1% of the project area). This NSR can be purchased in its entirety at Fathom's option for \$500,000.

From 2016 through 2021 the Company acquired additional mineral dispositions through staking directly with the Government of Saskatchewan's Department of Energy and, in one circumstance, through a 3rd party claim holder. At year end, and at the date of this MD&A, the Company held 31 contiguous claims totaling 90,460 hectares.

Between 2015 and 2019 as a privately held company with limited operating and exploration budgets, Fathom focused on compiling the historic database, data interpretation, updating geological models, obtaining exploration permits, and completing limited drill programs. These initiatives led to the identification of numerous exploration targets within a fully permitted project in place for when the company became publicly listed and financing was available.

2021 Exploration Program

Fathom conducted a winter exploration program on the Albert Lake Property in February and March 2021 consisting of:

¹ Source: Saskatchewan Mineral Deposit Index #0958. The reliability of the historical data and resource estimate presented here cannot be confirmed by the authors, nor can the assumptions, parameters and methods used to prepare the estimates. The estimate is not considered NI 43-101 Compliant by the definition of a "mineral resource" and further work is required to verify the historical estimate as a current mineral resource. Furthermore, records suggest (Saskatchewan Mineral Deposit Index #0958) that some of this historical resource has been exploited making a delineation of this mineral resource impossible. Fathom Nickel is not treating the historical estimate as a current mineral resource.

FATHOM NICKEL INC.
Management's Discussion and Analysis
Three Months Ended March 31, 2023

- The re-opening of the 14-person camp originally constructed in 2018 situated adjacent to the historic Rottenstone Mine.
- Nine NQ-size drillholes were completed (AL21017 – AL21025), amounting to 1,232m drilled.
- Six drillholes were designed to test the south/southwest extension of the historic Rottenstone Mine. Two drillholes drilled from the ice near the Island Showing tested an area where several known, favourable ultramafic intersections were identified in drilling completed in 2003. The final drillhole was a follow-up to an off-hole borehole electromagnetic (“BHEM”) anomaly associated with a significant ultramafic intersection identified in historic drillhole RL03030.
- Four of the nine drillholes drilled were probed utilizing BHEM instrumentation, and four historic drillholes were probed; RL03030 (re-probe), RL03031, FMRS18-012 and FMRS18-013.
- Surface electromagnetic (“EM”) profiles were generated in the area of drillholes AL21021 and AL21022 and 467 of a proposed 800 stations on Rottenstone Lake were systematically measured as part of a gravity survey.

Significant results include:

- Confirmation of an extension to the historic high-grade Ni-Cu-Co + PGE Rottenstone deposit (the “**Rottenstone Extension**”), a minimum 40m south-southwest. The mineralized extension includes 18.1 g/t Pt associated with 1.71% Ni, 1.21% Cu, 0.05% Co, 1.94 g/t Pd over 1.01m (7.22% NiEq).
- Discovery of new, ultramafic mineralization 550m northwest of the historic Rottenstone Mine (the “**Island Showing Area Discovery**”). BHEM survey in the drillhole at the Island Showing Area, together with subsequent modelling, indicates a plunging body, increasing in conductivity south of the drillhole, potentially indicative of increased mineralization in a southerly direction.
- Updated metallurgical assay work on a bulk sample collected in 2017. In addition to the grades and recoveries reported in 2017, four of the coarse reject samples were analyzed for rhodium (Rh), osmium (Os), iridium (Ir) and ruthenium (Ru) returned an average grade of 0.20 g/t Rh, 0.13 g/t Os, 0.11 g/t Ir and 0.06 g/t Ru.

In April 2021, a 9,000 line-kilometer heliborne gradient MAG survey was conducted at 100m line spacing on the entire project area.

From June through October 2021 Fathom conducted a summer/fall exploration program consisting of:

- Geological mapping, prospecting and a B-horizon soil geochemistry survey in the vicinity of the historic Rottenstone mine, along trend and within what the Company recognizes as a favourable structural corridor.
- The collection of 216 rock samples for analysis.
- The collection of 4,375 B-horizon soil geochemistry samples.
- Extension of the winter 2021 gravity survey resulting in 347 additional data stations.
- Completion of surface EM over select areas.
- Continuation of BHEM surveys in 10 historical drillholes.
- Thirteen NQ-size drillholes were completed (AL21026 – AL21038), amounting to 3,102m drilled.
- All summer/fall 2021 drillholes were probed by BHEM.

FATHOM NICKEL INC.
Management's Discussion and Analysis
Three Months Ended March 31, 2023

- X-ray fluorescence ("XRF") litho-geochemistry was completed on all summer-fall 2021 drillholes; XRF surveying on historic drillholes was initiated.
- Geological mapping identified new target areas where favourable host stratigraphy, notably supracrustal rocks similar to the host stratigraphy at the historic Rottenstone deposit, occur along trend to the north-northeast and south of the historic mine. Preliminary soil geochemistry results from the 2021 survey, incorporated with historic soil geochemistry results (2002 and 2018) has highlighted numerous areas and zones of coincident magmatic nickel pathfinder elements (Ni, Cu, Co + Cr, Mg).

Significant results from the summer/fall exploration program include:

- Anomalous Ni, Cu and/or PGE mineralization was detected in 11 of the 13 holes completed in the program.
- Rottenstone-like stratigraphy was identified in a 13-meter interval in hole AL21029 (located in "the Dime Area"). Significant intercepts in this interval included 4,200ppm Ni and 1.25 g/t Pd-Pt+Au over a 1.17-meter interval.
- Within the Island Showing trend, drillhole AL21033 has defined a robust off-hole BHEM conductor 130.0 meters south of drillhole AL21021 and its associated mineralization and BHEM conductivity.

2022 Winter Exploration Program

Fathom conducted a winter drilling program on the Albert Lake Property between mid-January and March, 2022 consisting of:

- 21 NQ-size drillholes were completed (AL21039 – AL21057), amounting to 3,900m drilled.
- 15 drillholes were focused in the newly defined Bay Area Conductive Corridor (developed from the Island Showing Area discovery and subsequently renamed to the Bay-Island Trend).

Significant results include²:

- Magmatic nickel mineralization occurs within the Bay-Island Trend, located 450m west/northwest of the high-grade, historic Rottenstone deposit. The significance of this new discovery is proof that the high-grade Rottenstone deposit does not occur in isolation and both mineralized ultramafic intrusives originated from a larger source.
- The Bay-Island Trend exceeds 300m in strike and remains open in both directions.
- 15 drill holes were drilled within the Bay-Island Trend and each drill hole intersected nickel, with individual sample intervals grading up to 3.07% NiEq.
- Eight of the drillholes from the program intersected significant nickel and nickel equivalent values over drilled intervals up to 13.27m.
- Drill hole AL22052 displayed the best overall results to date with 3.54m at 1.68% NiEq (1.09% Ni, 0.42% Cu, 0.068% Co and 0.75g/t Pt, Pd & Au) within a 13.27m zone at 1.00% NiEq (0.62% Ni, 0.29% Cu, 0.039% Co and 0.62g/t Pt, Pd & Au).
- Three drill holes visually match the net-texture mineralization of the "Rottenstone style" mineralogy. These results, plus other magmatic nickel textures recognized within the mineralized trend could potentially define the outer edges of a Rottenstone-like deposit

² Note where nickel equivalent is used in this section (NiEq% = Ni% + Cu% x \$4.50/\$11.00 + Co% x \$30.00/\$11.00 + Pt [g/t]/31.103 x \$1,050/\$11.00/22.04 + Pd [g/t]/31.103 x \$2400/\$11.00/22.04 + Au [g/t]/31.103 x \$1,900/\$11.00/22.04)

(the original Rottenstone mine was contained in a mineralized body measuring only 50m x 40m x 10m, yet yielded some of the highest grades of Ni-Cu + PGE ever mined in Canada).

- Additionally, both near surface and deeper high-priority borehole electromagnetic ("BHEM") targets within and outside the mineralized trend remain as high priority drill target areas.

2022 Summer Exploration Program

In early August 2022 Fathom completed its 2022 Summer exploration program. The program consisted of:

- Diamond drilling of 15 drillholes with total meterage drilled of approximately 1,700 meters;
- Completion of a 2,447 l-km heliborne AirTEM geophysical survey;

The summer drill program was designed to extend the conductivity zone and associated ultramafic Ni-Cu-Co+PGE mineralization south of drillhole AL22057 identified during the winter drill campaign (the "Winter Program"). Highlights of the program include:

- Approximately 1,700 meters of drilling will have been completed on a trend south of drillhole AL22057 resulting in the discovery of the Bay-Island Trend;
- Several drillholes intersected mineralized ultramafic and magmatic sulphide textures similar to the magmatic textures recognized in the Winter Program and at the historic Rottenstone Mine;
- Magmatic nickel mineralization occurring in ultramafic, pegmatite and sediments in favourable stratigraphy has been recognized in drillhole intervals of up to 16 meters;
- This type of favourable mineralized stratigraphy has now been recognized 140 meters south of drillhole AL22057, thus confirming that the Bay-Island Trend extends for more than 300 meters along strike and remains open along strike both north and south;
- Ongoing modeling of mineralized intercepts along with conductive plates determined by BHEM surveys demonstrates continuous conductivity along the ultramafic mineralized trend as well as localized areas of increased conductivity;

Assay results were released on September 28, 2022. The Company confirmed that zones of identified favourable conductivity aligned with soil geochemical anomalies (historic and those defined by Fathom in 2018 and 2021), and with favourable MAG anomalies as defined by the gradient MAG survey conducted in the spring of 2021.

Balch Exploration Consulting Inc. completed a heliborne transient electromagnetic survey ("AirTEM") over three individual grid areas totaling 2,447 l-km;

- A detailed grid at 50m line spacing was flown over the Bay-Island Trend Area and Rottenstone Mine area;
- A detailed grid (50m line spacing) was flown over the recently acquired Tremblay Olson area;
- A third grid (100m line spacing) was flown east/southeast of the historic Rottenstone Mine to compliment existing soil geochemistry and gradient MAG survey results.

2022 Fall Exploration Program

In October 2022 Fathom completed its 2022 fall exploration program at the Tremblay-Olson Claims area. The program included soil and rock sampling, mapping and prospecting. Assay results were released on January 17, 2023.

2023 Winter Exploration Program

The Company completed a short winter drill program in March 2023 at the Albert Lake property. Work consisted of a gravity survey over the Tremblay-Olson Claims area as well as the drilling of two diamond drillholes to test the highly anomalous metals-in-soil trend discovered during the soil sampling campaign in October 2022. The results of the drilling were released on May 5, 2023. While the assays and pXRF data detected anomalous nickel and pathfinder elements, the results did not explain the robust soil assays overlaying the drill target areas. However, the BHEM probe data from both holes did indicate the existence of potentially significant off-hole conductors within the target area. Unfortunately, due to budget constraints, the Company ended the program after only two of a planned five-hole program.

4.B Gochager Lake Project

On September 19, 2022 Fathom announced that it entered into a mineral property option agreement with the sole owner of the Gochager Lake Property ("Gochager"). The Option Agreement provides Fathom with the exclusive right and option to earn, subject to the reservation of a 2% net smelter return royalty, up to a 100% title and interest to nine mineral claims covering approximately 4,696 hectares located in north-central Saskatchewan. The Property is approximately 60 km southwest from the Company's flagship Albert Lake Property in north-central Saskatchewan.

The Gochager Lake property is approximately 75 km north of the town of La Ronge and in close proximity to the Company's flagship Albert Lake Project. Gochager has had an estimated 149+ historic drillholes completed on the project totaling approximately 27,200 meters drilled. Historical resource estimates that do not meet the standards of National Instrument 43-101 were generated in 1968 and 1990 and are reported in the Saskatchewan Mineral Deposit Index [SMDI #0880].

The 1968 non-compliant resource for the Gochager estimated 4.3 million tons grading 0.295% Ni and 0.081% Cu³. A 1990 report reported that vertical and longitudinal sections were constructed from the existing data and an orebody with reasonably well-defined limits was defined containing 1.8 million tons at 0.735% nickel-equivalent. Historically, previous operators were inconsistent when assaying for cobalt and there is very limited data with respect to palladium and platinum analyses. A qualified person has not done sufficient work to classify the historical estimate as current mineral resources or mineral reserves, and the Company is not treating the historical estimate as current mineral resources or mineral reserves. However, the historical resources do point to the potential of the project hosting a nickel-copper-cobalt mineral deposit.

Fathom believes the Property has significant exploration upside as there has been no significant drilling activity at the project since 1989-1990, with the exception of two drillholes

3 – The Saskatchewan Mineral Deposit Index (SMID#0880) reports drill indicated reserves of 4,262,400 tons grading 0.295% Ni and 0.081% Cu mineable by open pit. Fathom cannot confirm the resource estimate nor the parameters and methods used to prepare the reserve estimate. The estimate is not considered NI43-101 compliant and further work is required to verify this historical drill indicated reserve.

FATHOM NICKEL INC.
Management's Discussion and Analysis
Three Months Ended March 31, 2023

drilled in 2018. A 2008 VTEM survey defined numerous quality conductors that, to date, have not been ground-assessed nor tested by drilling. No borehole EM (BHEM) surveys have ever been conducted within the historic resource area. BHEM surveys, in conjunction with drilling at the Company's Albert Lake Project, has been a key exploration tool in defining nickel mineralization over the 300+ meter Bay-Island Trend, situated within 500 meters of the historic Rottenstone mine.

The Company initiated the permitting process for Gochager in Q-4 2022 and was granted an Exploration Permit on January 23, 2023. . On the assumption of being granted an Exploration Permit, Fathom initiated exploration plans for a winter 2023 drill program at Gochager in addition to a winter drill program at the Albert Lake Project.

Winter 2023 Program

The Company completed a drill program at the Gochager Lake property; two drillholes 725 meters. BHEM surveys were performed on both drillholes along with three historic drillholes occurring at the property. Drill results were reported in a Company News Release April 12, 2023.

As discussed in section 2, above, on March 22, 2023 the Company announced the strategic acquisition of the Watts Lake Mineral Claims, increasing the overall total size of the Gochager Lake Project to 19,577 hectares.

FATHOM NICKEL INC.
Management’s Discussion and Analysis
Three Months Ended March 31, 2023

Analysis of Key, Material Variances

Fathom’s operations for Q1-23 resulted in an operating loss of \$606,847 versus an operating loss of \$564,252 for the three-month period ended March 31, 2022 (“Q1-22”).

The increase in the loss in Q1-23 compared to Q1-22 of approximately \$42,000 is primarily the result of the following specific material variances include:

- ***Share based compensation.*** During Q1-23 the Company recorded an expense of \$54,504 related to the vesting of options issued in fiscal 2023 (Q1-22, \$285,000). The bulk of the Q1-22 figure is a result of options that were issued in 2021, as part of the Company’s IPO. Those options have all been expensed as at the current date.
- ***Administrative consulting.*** The 32% decrease in Administrative consulting during Q1-23 is the result of the departure of one of the Company’s executives in Q3-22.
- ***Investor relations and capital markets consulting.*** The Company experienced a very sharp increase in this category on Q1-23 vis-à-vis the same period of 2022. \$304,741 was spent on investor relations groups with a specific focus on European and international investors in the quarter. During Q1-22 the Company had scaled-back its IR spend.
- ***Advertising and Promotion.*** The approximate \$38,000 increase in advertising and promotion in Q1-23 versus Q1-22 is a result the engagement of two promotions firms in the quarter – one US-based and one European-based.

7. QUARTERLY FINANCIAL INFORMATION

The following selected financial data for the past eight quarters has been prepared in accordance with IFRS and should be read in conjunction with the Corporation’s audited annual financial statements:

8. LIQUIDITY AND CAPITAL RESOURCES

As at March 31, 2023, the Company had a cash position of \$524,211 (Q1-22, \$5,071,674) and net working capital of \$912,961 (Q1-22, \$5,145,214). The substantial decrease in cash position and net

FATHOM NICKEL INC.
Management's Discussion and Analysis
Three Months Ended March 31, 2023

working capital in the quarter relative to the same period of 2021 is a result of the completion of the four separate exploration programs between April 2022 and March 2023.

At this stage in its business model Fathom is wholly dependent on equity financing to complete the exploration, evaluation and development of its Albert Lake Property, fund its general and administrative expenses and to assess other potential mineral projects in Saskatchewan and elsewhere. See also "Risk Factors". Fathom has not generated any revenue from operations and does not expect to generate any such revenue in its current or next fiscal year. As at the date of this MD&A, Management is confident that the Company will be sufficiently capitalized to fund the balance of its 2023 exploration initiatives and general operating expenses. See Section 2 regarding the closing of a \$1.45 million financing on the date of this MD&A.

An investment in Fathom's securities is speculative, see "Risk Factors".

Fathom had no off-balance sheet arrangements as at March 31, 2023.

9. OUTLOOK

Fathom is currently in the exploration stage and is subject to risks and challenges similar to companies in a comparable stage. These risks include but are not limited to: challenges of securing adequate capital in view of exploration, development and operational risks inherent in the mining and mineral exploration industries, changes in the global economic environment, and fluctuations in base and precious metals market pricing. There is no assurance that Fathom's funding initiatives will continue to be successful to fund its planned exploration activities, which are currently focused on its Albert Lake Project.

Working capital from Fathom's treasury, as available from time to time, may also be used to acquire and explore other properties either alone or in concert with others as opportunities and finances permit.

10. CRITICAL ACCOUNTING ESTIMATES AND SIGNIFICANT JUDGEMENTS

Fathom's interim financial statements for the period ended March 31, 2023 have been prepared using IFRS applicable to a going concern, which assumes continuity of operations and realization of assets and settlement of liabilities in the normal course of business. However, Fathom is in the exploration stage and is subject to risks and challenges similar to companies in a comparable stage. As a result of these circumstances, there would ordinarily be significant doubt as to the appropriateness of the going concern presumption. However, due to a net working capital of \$912,961 (see Section 8, above) and the closing of the first tranche of its equity financing on the date of this MD&A (see Section 2, above), Management is confident that the going concern presumption is appropriate as at the date of this MD&A. However, there is no assurance that Fathom's funding initiatives will continue to be successful in the future and these financial statements do not reflect the adjustments to the carrying values of assets and liabilities and the reported expenses and balance sheet classifications that would be necessary if the going concern assumption is no longer deemed to be appropriate. These adjustments could be material.

The preparation of Fathom's Q1-23 interim financial statements for the period ended March 31, 2023 required management to make certain estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and reported amounts of expenses during the reporting period. Actual outcomes could differ from these estimates. The Q1-23 interim financial statements include estimates, which by their nature are uncertain. The impacts of such estimates are pervasive throughout the Q1-23 interim financial statements and may require accounting adjustments based on future occurrences. Revisions to accounting estimates are recognized in the period in which

FATHOM NICKEL INC.
Management's Discussion and Analysis
Three Months Ended March 31, 2023

the estimate is revised and future periods if the revision affects both current and future periods. These estimates are based on historical experience, current and future economic conditions and other factors, including expectations of future events that are believed to be reasonable under the circumstances.

Significant assumptions about the future and other sources of estimation uncertainty that management has made at the statement of financial position reporting date, that could result in a material adjustment to the carrying amounts of assets and liabilities, in the event that actual results differ from assumptions made, relate to, but are not limited to, the following:

- The recoverability of exploration and evaluation expenditures incurred,
- The fair value of stock options issued in conjunction with the issuance of the Company's common shares and the fair value of stock options using the Black Scholes option pricing model,
- Management's assumption of no material restoration, rehabilitation and environmental costs, based on the facts and circumstances that existed during the period,
- The recoverability of deferred tax assets and liabilities,
- The going concern assumption and judgement in evaluating the existence of material uncertainties and any significant doubt regarding the Company's ability to continue as a going concern; and
- The fair value of the liability component of debt that has conversion feature or is non-arm's length.

Critical accounting judgments:

The determination of categories of financial assets and financial liabilities has been identified as an accounting policy which involves judgments or assumptions made by management.

11. SIGNIFICANT ACCOUNTING POLICIES

The Q1-23 interim financial statements have been prepared on the basis of IFRS standards that were in effect at March 31, 2023 and these accounting policies have been applied consistently to all periods presented in the Q1-23 interim financial statements. The policies described below, and estimates related to them, have the most significant effect in preparation and presentation of Fathom's financial statements.

Exploration and Evaluation Asset

i) Pre-exploration costs

Pre-exploration costs are expensed in the year in which they were incurred. Pre-exploration costs are those incurred prior to obtaining the legal right to explore.

ii) Exploration and evaluation expenditures

Once the legal right to explore a property has been acquired, costs directly related to exploration and evaluation ("E&E") expenditures are recognized and capitalized, in addition to the acquisition costs. These direct expenditures include such costs as materials used, surveying costs, drilling costs, payments made to contractors and depreciation on plant and equipment during the exploration phase. Costs not directly attributable to exploration and evaluation

FATHOM NICKEL INC.
Management's Discussion and Analysis
Three Months Ended March 31, 2023

activities, including general administrative overhead costs and share based payments to employees and consultants, are expensed in the period in which they occur.

The acquisitions of mineral property interests are initially measured at cost. Mineral property acquisition costs and development expenditures incurred subsequent to the determination of the feasibility of mining operations and approval of development by the Company are capitalized until the property to which they relate is placed into production, sold or allowed to lapse.

Mineral property acquisition costs include the cash consideration and the fair market value of shares issued for mineral property interests pursuant to the terms of the relevant agreements. These costs will be amortized over the estimated life of the property following commencement of commercial production, or written off if the property is sold, allowed to lapse, or when an impairment of value has been determined to have occurred.

iii) Developed and producing properties

Once the technical feasibility and commercial viability of extracting the mineral resource has been determined, the property is considered to be a mine under development and is classified as property, plant and equipment. Once commercial production has commenced, these costs are amortized using the units-of-production method based on proven and probable reserves. Production facilities and equipment are stated at cost and will be depreciated using the units-of-production method at rates sufficient to depreciate the assets over their estimated useful lives, not to exceed the life of the mine to which the assets relate.

Government incentives

The Company is entitled to the refundable Saskatchewan Targeted Mineral Exploration Incentive ("TMEI") grant as a result of incurring qualifying mineral exploration expenses in Saskatchewan. These amounts are recognized when the amount to be received can be reasonably estimated and collection is reasonably assured. Once recovered, these amounts are treated as a reduction to the carrying value of E&E properties.

12. ACCOUNTING ISSUES

Management of Capital Risk

The objective when managing capital is to safeguard Fathom's ability to continue as a going concern, so that it can continue to provide adequate returns to shareholders, benefits to other stakeholders and to have sufficient funds on hand to meet its exploration and development plans to ensure the ongoing growth of the business.

Fathom considers its shareholders equity and cash and equivalents as capital. Fathom manages the capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust capital structure, Fathom may issue new shares through private placements, repurchase shares, sell assets, incur debt, or return capital to shareholders. Fathom's working capital at March 31, 2023 was \$912,961 (Q1-22, \$5,145,214). Actual funding requirements may vary from those planned due to a number of factors, including the progress of exploration and development activities. Due to the cyclical nature of the industry, there is no guarantee that when Fathom needs to raise capital, there will be access to funds at that time.

Management of Financial Risk

Fathom is exposed to various financial instrument risks assesses the impact and likelihood of this exposure. These risks include fair value of financial instruments and commodity price risk. Where material, these risks are reviewed and monitored by the Board of Directors and they are more fully described in Note 5 to Fathom's audited annual financial statements for the year ended December 31, 2022.

13. CHANGES TO SIGNIFICANT ACCOUNTING POLICIES

There have been no significant changes in accounting policies applicable for the current period.

Future accounting changes

There are currently no proposed changes in accounting policy that are expected to have a material impact on the Company's reporting.

14. OUTSTANDING SHARE DATA

Authorized: Unlimited number of common shares without a value

	Period ended March 31, 2023	Year ended Dec 31, 2022
Authorized and issued	Number of common shares	
Balance, beginning of the period	82,873,060	55,311,393
Issued for property acquisition (ii),(iii)	2,000,000	150,000
Issued for cash pursuant to flow-through financing (i)	-	27,411,667
Balance, end of the period	84,873,060	82,873,060
Balance, beginning of the period	\$ 18,131,836	\$ 17,000,721
Fair value of broker warrants (i)	-	(114,310)
Flow through premium liability (i)	-	(274,000)
Issued for property acquisition (ii),(iii)	180,000	13,500
Issued for cash pursuant to flow-through financing (i)	-	1,505,925
Balance, end of the period	\$ 18,311,836	\$ 18,131,836

- (i) On December 29, 2022, FNI completed a non-brokered private placement of 27,411,667 flow through shares at a price \$0.06 per share for gross proceeds of \$1,644,700. The flow through premium liability associated with the issuance of the flow through shares was calculated at \$0.01 per flow through share, based on a market price of \$0.05 per share on the closing date of the financing, and subtracting this from the selling price. This resulted in a flow through premium liability of \$274,000. In connection with the issuance of the flow through shares the Company paid \$107,785 in fees. The agents were also granted 1,778,910 broker warrants, exercisable at a price of \$0.06 per broker warrant into one common share of FNI for a period of three years from the date of the closing of the financing, or December 29, 2025.

The fair value of the broker warrants issued were estimated at the date of grant using the Black-Scholes model with the following weighted average assumptions: (I) dividend yield of 0%; (II) expected volatility of 110%; (III) a risk-free interest rate of 3%; (IV) an expected life of 3 years and (V) a broker warrant price of \$0.06. Expected volatility was based on comparable companies. This resulted in a fair value of \$0.06 per broker warrant for a total of \$114,310. The total share issuance costs for the issuance of the flow through shares amounted to \$138,775, inclusive of the agent's \$107,785 as noted above.

- (ii) Upon execution of Gochager Option on September 16, 2022, FNI issued 150,000 common shares at the market price of \$0.09 per share to the Optionor of Gochager. See Note 7.

FATHOM NICKEL INC.
Management's Discussion and Analysis
Three Months Ended March 31, 2023

- (iii) Upon execution of Watts Lake Agreement on March 31, 2023, FNI issued 2,000,000 common shares at the market price of \$0.09 to SKRR Exploration Inc. See Note 5.

Stock option plan

The Company has a stock option plan to provide employees, directors, officers and consultants with options to purchase common shares of the Company. Under the plan, the exercise price of each option equals the market price of the Company's stock on the day of grant and the maximum term of option is four years. Options vest immediately upon issuance. The maximum number of shares which may be issued under the program shall not exceed 10% of the issued and outstanding shares. The following summarizes the employees, directors, officers and consultants stock options that have been granted, exercised, expired, vested or cancelled during the period ended December, 2022 and December 2021:

	Number of Options Issued/(Cancelled)	Number of Options Vested	Weighted Average Exercise Price
Balance, Dec 31, 2021	3,000,000	1,020,000	\$ 0.70
Granted	1,200,000	-	0.22
Vested	-	2,190,000	
Cancelled	(975,000)	(727,500)	0.22
Balance, Dec 31, 2022	3,225,000	2,482,500	\$ 0.56
Granted	5,000,000	-	0.09
Vested	-	1,666,667	
Cancelled	(2,300,000)	(1,557,500)	0.70
Balance, March 31, 2023	5,925,000	2,591,667	\$ 0.11

The fair value of the options issued in 2022 were estimated at the date of grant using the Black-Scholes model with the following weighted average assumptions: (I) dividend yield of 0%; (II) expected volatility of 110%; (III) a risk-free interest rate of 1%; (IV) an expected life of 5 years and (V) a common share price of \$0.22. Expected volatility was based on comparable companies. This resulted in a fair value of \$0.16 per options for a total of \$205,515. The options vest 100% at the grant date.

The fair value of the options issued in 2023 were estimated at the date of grant using the Black-Scholes model with the following weighted average assumptions: (I) dividend yield of 0%; (II) expected volatility of 110%; (III) a risk-free interest rate of 1%; (IV) an expected life of 5 years and (V) a common share price of \$0.09. Expected volatility was based on comparable companies. This resulted in a fair value of \$0.06 per options for a total of \$90,671. The options vest 1/3 at the grant date and 1/3 on each of the first and second anniversaries of the grant date.

During 2021, the Company granted 115,000 restricted share units (RSUs) to officers of the Company. The RSUs vest 1/3 on 1st on the first anniversary, 1/3 on 2nd on the second anniversary, and 1/3 on 3rd on the third anniversary. During 2022, 55,000 RSUs were cancelled without exercise, leaving 60,000 unexercised RSUs outstanding.

FATHOM NICKEL INC.
Management’s Discussion and Analysis
Three Months Ended March 31, 2023

Stock based compensation shares related to the RSUs for the period ending December 31, 2021 was not material.

Warrants

Other than the broker warrants issued in connection with the issuance of flow through shares as noted above, there were no other warrants issued during the period or outstanding at March 31, 2023 or December 31, 2022.

Share Capital at date of MD&A – March 31, 2023

	Outstanding as at at Mar 31, 2023	Outstanding as at at May 30, 2023
Common shares	84,873,060	84,873,060
Compensation Warrants	1,071,669	-
Options	5,925,000	5,925,000
RSUs	60,000	60,000
Broker warrants	1,778,910	1,778,910

15. OTHER INFORMATION

Contractual Commitments

At March, 2023 Fathom had the following commitments for material exploration expenditures:

- As described in Note 10 of the Q1-23 interim financial statements, the Company completed a non-brokered flow-through financing on December 29, 2022 for total gross proceeds of \$1,644,700. The Company is therefore required to incur qualifying exploration expenditures on eligible Canadian exploration and development expenses totalling \$1,644,700 prior to December 31, 2023 in order to satisfy the spending commitment in respect of funds raised via this flow through financing in 2022.
- As disclosed in Exploration and Evaluation Asset (Note 5), the Company is required to incur annual minimum work program expenditures ranging between \$15.00 and \$25.00 per hectare in order to maintain title to the dispositions. Excess qualifying exploration expenditures can be carried forward indefinitely to be applied to future years’ work requirements. At March 31, 2023, all of the Company’s mineral dispositions were in good standing and did not require any level of expenditure to remain in good standing through the end of 2023.
- The Company’s activities are subject to environmental regulation (including regular environmental impact assessments and permitting) in each of the jurisdictions in which its mineral properties are located. Such regulations cover a wide variety of matters including,

FATHOM NICKEL INC.
Management’s Discussion and Analysis
Three Months Ended March 31, 2023

without limitation, prevention of waste, pollution and protection of the environment, labour relations and worker safety. The Company may also be subject under such regulations to clean-up costs and liability for toxic or hazardous substances which may exist on or under any of its properties or which may be produced as a result of its operations. It is likely that environmental legislation and permitting will evolve in a manner which will require stricter standards and enforcement. This may include increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a higher degree of responsibility for companies, their directors and employees.

- The Company has not determined and is not aware that any provision for such costs is required and is unable to determine the impact on its financial position of environmental laws, if any, and regulations that may be enacted in the future due to the uncertainty surrounding the form that these laws and regulations may take.
- Effective December 1, 2021 the Company entered into a lease for office space. Pursuant to the lease the Company is committed to pay monthly basic rent plus additional rent (the proportionate share of costs incurred in the operation, maintenance, management and supervision of the property). The lease provides for a fixturing period of ten months during which no cash rental payments are required. Monthly cash rental payments commenced in October 2022 and extend through December 2027. Annual commitments under the lease are:

<u>Year ending</u>	<u>Base Rent</u>	<u>Additional Rent</u>	<u>Total</u>
31-Dec-23	\$ 12,744	\$ 29,067	\$ 41,811
31-Dec-24	17,378	39,415	56,793
31-Dec-25	19,115	40,085	59,200
2026+	42,671	82,051	124,722
Total	<u>\$ 91,908</u>	<u>\$ 190,618</u>	<u>\$ 282,526</u>

Note: Additional rent is indexed based on forecast increases in CPI over the period.

The office lease is recorded as a *Right to use asset* and *Lease liability* as described in Note 6 of the Q1-23 interim financial statements.

Related Party Transactions

The following related party transactions occurred and were charged in the financial statements during the periods ended March 31, 2023 and 2022 as follows:

	March 31, 2023	March 31, 2022
Administrative and exploration-related consulting fees:		
Administrative consulting fees were charged by officers for corporate administrative and financial management services	\$ 45,000	\$ 66,285
Consulting fees were charged by officers for geological management of the Company's exploration and evaluation asset (Note 5)	\$ 21,000	\$ 50,856
Legal fees charged by a law firm of which a director of the Company is a partner	\$ 12,626	\$ 13,668

Amounts accrued and paid as administrative consulting fees are expensed disclosed in the Statement of Loss as administrative consulting fees. Amounts accrued and paid as geological consulting fees are capitalized to the exploration and evaluation asset account. Legal fees associated with equity financings are disclosed as a share issuance cost and recorded as a reduction to share capital. Legal fees on account of general corporate and other non-financing matters are expensed in the Statement of Loss as legal and accounting fees.

At the period end, the Company owed the respective holding companies owned by officers of the Company for administrative and geological consulting fees \$ Nil (March 31, 2022 - \$ Nil). At March 31, 2023, the Company had a recorded liability of \$2,903 owing to the law firm of which a director of the Company is a partner (March 31, 2022 \$12,457).

- [1] Until August 31, 2022 administrative consulting fees included the monthly fees charged by Brad Van Den Bussche in his role as President and CEO. Mr. Van Den Bussche contracted his services through his 100%-owned holding company, Kaybri Resource Management Ltd. ("Kaybri"). Through a contract between the Company and Kaybri executed in May 2021, Kaybri charged the Company a monthly fee of \$15,350 for the CEO services. Unless alternate circumstances are warranted, the CEO fee was allocated 70% to administrative consulting and 30% to geological management. Also included in administrative consulting fees is the termination compensation paid to Mr. Van Den Bussche in accordance with the terms the Kaybri contract.
- [2] Included in administrative consulting fees is the monthly fees charged by Doug Porter in his role as CFO. Mr. Porter contracts his services through his 100%-owned holding company, Porter Valuations & Financial Consulting Inc. ("PV&FC"). Through a contract between the Company and PV&FC executed in May 2021, PV&FC charges the Company a monthly fee of \$11,350 for the CFO services (reduced to \$11,000 beginning in January 2023). The CFO fee is allocated 100% to administrative consulting.
- [3] Included in geological management is the monthly fees charged by Ian Fraser in his role as Vice President, Exploration and, since September 2022, CEO. Mr. Fraser contracts his services through his 100%-owned holding company, IF Consulting Inc. ("IFC"). Through a contract between the Company and IFC executed in May 2021, IFC charges the Company a monthly fee of \$12,350, reduced to \$11,000 on January 1, 2023.

FATHOM NICKEL INC.
Management's Discussion and Analysis
Three Months Ended March 31, 2023

This fee is allocated as follows: \$7,000 to geological consulting (\$3,500 each to Gochager Lake and Albert Lake) and \$4,000 to Administrative Consulting.

- [4] McLeod Law LLP provides various legal services to the Company included, but not limited to securities, corporate-commercial and general corporate legal services. Eugene Chen, a partner of McLeod Law LLP is also a member of the board of Fathom.

Risk Factors

Fathom is in the exploration stage and is subject to the risks and challenges similar to other companies at a comparable stage. Other than the risks relating to reliance on future financings as previously discussed, as well as those discussed elsewhere in this MD&A, the Fathom's risks include, but are not limited to its limited operating history, the speculative nature of mineral exploration and development activities, operating hazards and risks, mining risks and insurance, no current mineral resources or reserves, environmental and other regulatory requirements, competition, stage of development, fluctuations in commodity prices, conflicts of interest, reliance on key individuals, enforcement of civil liabilities as discussed further below.

Limited Operating History - An investment in Fathom should be considered highly speculative due to the nature of Fathom's business. Fathom has no history of earnings, it has not paid any dividends and it is unlikely to enjoy earnings or be paying dividends in the immediate or foreseeable future.

Speculative Nature of Mineral Exploration and Development Activities - Resource exploration and development is a speculative business, characterized by a number of significant risks including, among other things, unprofitable efforts resulting not only from the failure to discover mineral deposits but from finding mineral deposits which, though present, are insufficient in quantity and quality to return a profit from production. The marketability of minerals acquired or discovered by Fathom may be affected by numerous factors which are beyond the control of Fathom and which cannot be accurately predicted, such as market fluctuations, the proximity and capacity of milling facilities, commodity markets and processing equipment and such other

factors as government regulations, including regulations relating to royalties, allowable production, importing and exporting of minerals and environmental protection, the combination of which factors may result in Fathom not receiving an adequate return of investment capital.

Substantial expenditures are required to establish mineral reserves through drilling, to develop processes to extract and process and refine the minerals and, in the case of new properties to develop the mining and processing facilities and infrastructure at any site chosen for mining. Although substantial benefits may be derived from the discovery of a major mineral deposit, no assurance can be given that minerals will be discovered in sufficient quantities and grades to justify commercial operations or that the funds required for development can be obtained on a timely basis. Estimates of mineral reserves, mineral deposits and production costs can also be affected by such factors as environmental permitting regulations and requirements, weather, environmental factors, unforeseen technical difficulties, unusual or unexpected geological formations and work interruptions. In addition, the quality and quantity of minerals ultimately mined may differ from that indicated by drilling results.

Fathom's Albert Lake Project is in the exploration stage only and is without known bodies of a mineral resource. The exploration programs proposed by Fathom are exploratory searches for commercial mineral deposits only. Development of any of Fathom's current or future mineral properties will only follow upon obtaining satisfactory exploration results.

Few properties which are explored are ultimately developed into producing mines. Major expenses may be required to establish mineral resources and reserves, develop metallurgical processes and construct mining and processing facilities at a particular site. There is no assurance that Fathom's mineral exploration activities will result in any discoveries of commercially minable ore bodies. Also, no assurance can be given that any or all of Fathom's properties will not be subject to prior unregistered agreements or interests or undetected claims which could be materially adverse to Fathom.

No Mineral Resource or Reserves - All of the Fathom properties are considered to be in the exploration stage only and do not contain a known mineral resource. Mineral resources and reserves are estimates and no assurance can be given that the anticipated mineral grades, and tonnages will be achieved or that the indicated level of recovery will be realized. Resource and reserve estimates for properties that have not yet commenced production may require revision based on actual production experience. Market price fluctuations of base and precious minerals, as well as increased production costs or reduced recovery rates may render reserves containing relatively lower grades of mineralization uneconomic and may ultimately result in a restatement of resources and/or reserves.

Conflicts of Interest - Certain of the Directors and Officers of Fathom are engaged in, and will continue to engage in, other business activities on their own behalf and on behalf of other companies and, as a result of these and other activities, such Directors and Officers of Fathom may become subject to conflicts of interest. Canadian corporate laws provide that in the event that a Director has an interest in a contract or proposed contract or agreement, the Director shall disclose his interest in such contract or agreement and shall refrain from voting on any matter in respect of such contract or agreement unless otherwise provided under those laws. To the extent that conflicts of interest arise, such conflicts will be resolved in accordance with the provisions of the applicable Canadian corporate laws.

Operating Hazards and Risks - Mineral exploration involves many risks, which even a combination of experience, knowledge and careful evaluation may not be able to overcome. Fathom's operations will be subject to all the hazards and risks normally incidental to exploration, development and production of minerals, such as unusual or unexpected formations, cave-ins or pollution, all of which could result in work stoppages, damage to property and possible environmental damage.

Mining Risks and Insurance - The business of exploring for and mining base and precious minerals is generally subject to a number of risks and hazards including environmental hazards, industrial accidents, labour disputes, unusual or unexpected geological conditions, pressures, cave-ins, changes in the regulatory environment and natural phenomena such as inclement weather conditions, floods, blizzards and earthquakes. No assurance can be given that such insurance will continue to be available or that it will be available at economically feasible premiums. Mining operations will be subject to risks normally encountered in the mining business.

Environmental and Other Regulatory Requirements - Fathom's activities are subject to environmental regulations promulgated by government agencies from time to time. Environmental legislation generally provides for restrictions and prohibitions on spills, releases

or emissions of various substances produced in association with certain mining industry operations, such as seepage from tailings disposal areas, which would result in environmental pollution. A breach of such legislation may result in imposition of fines and penalties. In addition, certain types of operations require the submission and approval of environmental impact assessments. Environmental legislation is evolving in a manner, which means stricter standards and enforcement, fines and penalties for non-compliance are more stringent. Environmental assessments of proposed projects carry a heightened degree of responsibility for companies and Directors, Officers and employees. The cost of compliance with changes in governmental regulations has a potential to reduce the profitability of operations.

The exploration operations of Fathom and development and commencement of production on its properties require permits from various federal and local governmental authorities and such operations are and will be governed by laws and regulations governing prospecting, development, mining, production, exports, taxes, labour standards, occupational health, waste disposal, toxic substances, land use, environmental protection, mine safety and other matters.

Companies engaged in the development and operation of mines and related facilities generally experience increased costs and delays in production and other schedules as a result of the need to comply with applicable laws, regulations and permits. Fathom believes it is in substantial compliance with all material laws and regulations, which currently apply to its activities.

Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. Parties engaged in mining operations may be required to compensate those suffering loss or damage by reason of the mining activities and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations and, in particular, environmental laws.

Competition - Significant and increasing competition exists for the limited number of minerals exploration acquisition opportunities available. As a result of this competition, some of which is with large established mining companies with substantial capabilities and greater financial and technical resources than Fathom, Fathom may be unable to acquire additional attractive mineral properties on terms it considers acceptable. Accordingly, there can be no assurance that Fathom's exploration and acquisition programs will yield any resources or reserves or result in any commercial mining operation.

Stage of Development - Fathom is in the business of exploring for, with the ultimate goal of extracting and refining minerals from its mineral exploration property. Fathom's Albert Lake Property has not commenced commercial production and Fathom has no history of earnings or cash flow from its operations. As a result of the foregoing, there can be no assurance that Fathom will be able to develop any of its current or future properties profitably or that its activities will generate positive cash flow.

Fathom has not paid any dividends and it is unlikely to enjoy earnings or paying dividends in the immediate or foreseeable future. Fathom has not sufficiently diversified such that it can mitigate the risks associated with its planned activities.

A prospective investor in Fathom must be prepared to rely solely upon the ability, expertise, judgment, discretion, integrity and good faith of Fathom's management in all aspects of the development and implementation of Fathom's business activities.

Fluctuations in Commodity Prices - The profitability, if any, in any mining operation in which Fathom has an interest is significantly affected by changes in the market price of nickel, copper, platinum and palladium, and other base and precious metals, which fluctuate on a short-term basis and are affected by numerous factors beyond Fathom's control.

Reliance on Key Individuals – Fathom's success depends to a certain degree upon certain key members of the management. These individuals are a significant factor in Fathom's growth and success. The loss of the service of members of the management and certain key employees could have a material adverse effect on Fathom.

Corporate Governance

Fathom's Board of Directors follows corporate governance policies to ensure transparency and accountability to shareholders.

16. FORWARD LOOKING STATEMENTS

This MD&A contains forward-looking statements with respect to Fathom's expectations, estimates and projections regarding its business and the economic environment in which it operates. These forward-looking statements, by their nature, involve risks and uncertainties that could cause actual results to differ materially from those contemplated by such statements. When used in this document, the words "may", "would", "could", "will", "intend", "plan", "propose", "anticipate", and "believe", used by any of the Company's management, are intended to identify forward-looking statements. Such statements reflect the Company's forecasts, estimates and expectations, as they relate to the Company's views with respect to future events and are subject to certain risks, uncertainties, and assumptions. Many factors could cause the Company's performance or achievements to be materially different from any future results, performance or achievements that may be expressed or implied by such forward-looking statements. Given these risks and uncertainties, readers are cautioned not to place undue reliance on such forward-looking statements. Except as required by securities law, the Company does not intend and does not assume any obligation, to update any such factors or to publicly announce the result of any revisions to any of the forward-looking statements contained herein to reflect future results, events, or developments.
