Dr R.E.W. Hancock,  
Department of Microbiology and Immunology  
University of British Columbia

Dear Bob,

I am writing this letter to support your proposal, “Nanoparticle formulations for anti-inflammatory IDR peptides” to the Nanomedicine Innovation Network for funding through the Networks of Centres of Excellence. This proposal covers the use of anti-inflammatory peptides for the treatment of chronic inflammatory diseases. We are very happy to provide our full support for this project and indications and will ensure the commercialization of the resultant formulated peptides to enable it to achieve final development in formal preclinical and clinical studies. The information and experience we gather through our relationships with other companies in developing peptides for different indications will be invaluable in guiding the path forward, and we are committed to prosecuting and maintaining the UBC-owned patents over the period of your proposal, a value of \$30,000 per year of in-kind. In addition we will provide \$45,000 per year in research support through our existing contracts with UBC to your lab to enable work on these formulations for veterinary products. Finally we will be utilizing your current research as leverage to raise further funding to go to your lab to cover year 2 activities. Good luck with the grant proposal.

Sincerley Yours

/s/ Micheal Graw
