

Highrock Resources Acquires Liberty Uranium Corporation

TORONTO, August 20, 2024 — Highrock Resources Ltd. ("Highrock" or "the Company") (CSE: HRK) is pleased to announce that it has entered into a share purchase agreement (the "Agreement") dated August 16, 2024 with Atikokan Resources Ltd. (the "Vendor") pursuant to which the Company will acquire all of the issued and outstanding shares in the capital of Liberty Uranium Corporation ("Liberty Uranium") from the Vendor (the "Acquisition"). Liberty Uranium is a private company incorporated pursuant to the laws of the State of Nevada and owns 100% undivided interest in the Dry Creek uranium project (the "Property"), located in the Uravan mineral belt, one of the most prolific uranium producing districts in the U.S.A, accounting for about 77% of all uranium production in Colorado, according to the Colorado Geological Survey.

Commenting on the Acquisition, Derrick Dao, CEO of Highrock noted: "Domestic energy security concerns and increasing power demand have resulted in strong, bi-partisan, regulatory support for the domestic American uranium industry.

The acquisition of Liberty Uranium and the Property is an important first step in advancing the Company's strategy to identify, acquire and advance high-quality uranium assets in the United States and establishes Highrock as a player in the important Uravan uranium district."

Strategic Rationale for the Acquisition:

- The Acquisition advances Highrock's consolidation strategy and positions the Company in the strategically important Uravan mineral belt.
- Mines in the Uravan have produced over 75 million pounds of uranium from ore averaging 0.24% and over 400 million pounds of vanadium¹.
- Proximity to uranium mill infrastructure to process mine ore.
- Colorado is an Agreement State of the Nuclear Regulatory Commission, providing the state with nuclear regulatory authority, resulting in more efficient permitting.
- Provides significant exploration upside.

About the Property

The Property is located approximately 60 miles northeast of the White Mesa Mill, located near Blanding in Utah.

¹ Chenoweth, William L., US Department of Energy. *The Uranium-Vanadium Deposits of the Uravan Mineral Belt and Adjacent Areas, Colorado and Utah.*

The Property has all the characteristics of historic mines elsewhere in the region that are host to multi-million pound uranium-vanadium resources, including the Sunday Mine Complex, the Topaz Mine, the Burro Mine Complex amongst others. This assessment is based on the Property's location, favourable sandstone characteristics, and proximity to an inferred major redox boundary. The Company cautions investors that mineralization hosted on nearby or adjacent properties is not necessarily indicative of mineralization hosted on the Property.

Historic and 2008 exploration drilling confirm the presence of U-V mineralization and favourable channel sandstones. Several exceptionally high vanadium mineral intercepts (13-22% V₂O₅) exist in the area based on historical proprietary assay data from Homeland Uranium.

Historic drill hole data within the Property includes over 20 holes drilled by Petro Nuclear and Union Carbide Corporation in the 1970s and early 1980s, and an additional 30 holes nearby. There are numerous historical small mines and prospects along the nearby faulted ridgeline to the south-southwest. The Dry Creek claims area, especially the northern part near the redox boundary, remains relatively underexplored, presenting significant exploration upside.

Two holes drilled by Union Carbide each intersected almost 1 foot of uranium mineralization that was accompanied by very high-grade vanadium mineralization between 13% and 20%. In 2008, a further drill program was completed by Homeland Uranium Inc.²

Terms of the Acquisition

As consideration for the Acquisition, the Company shall: (i) issue the Vendor an aggregate of 6,000,000 common shares (each, a "**Common Share**") in the capital of the Company; and (ii) a cash payment of \$100,000 to be evidenced by an unsecured promissory note in the amount of \$100,000 in favour of the Vendor.

Pursuant to the policies of the Canadian Securities Exchange (the "**CSE**"), the Acquisition and the issuance of the Common Shares remains subject to receipt of all necessary corporate and regulatory approvals, including the approval of the CSE. All Common Shares issued will be subject to a statutory hold period of four months plus a day from the date of issuance in accordance with applicable securities legislation.

Qualified Persons Review

² Technical Report on the Montrose and San Miguel Counties, Colorado and San Juan County, Utah, Holdings of Homeland Uranium, Inc. Feb 2008 filings.

The technical and scientific information contained within this news release have been reviewed and approved by James Pirie, P.Eng, a director of the Company and a Qualified Person as defined by National Instrument 43-101 - *Standards of Disclosure for Mineral Projects*. The Qualified Person has not completed sufficient work to verify the historic information on the Property; however given the quality of the historic work and the reputation of crosshair the Company believes the historical resources estimates to be both relevant and reliable. The information provides an indication of the exploration potential of the Property but may not be representative of expected results.

About Highrock Resources Ltd.

Highrock Resources Ltd. (CSE: HRK) is advancing uranium assets in the USA and supporting North American nuclear energy security for a sustainable energy economy and a more technologically advanced tomorrow.
