CRITICAL ACCOUNTING ESTIMATES

The presentation of consolidated financial statements in accordance with IFRS requires management to make estimates, judgments and assumptions that affect the Company's accounting policies to facilitate the reporting of the Company's assets, liabilities, and expenses during the period.

Estimates and related assumptions are reviewed regularly, on an ongoing basis, and revisions to such estimates are recognized prospectively in the period of revision.

Areas in which management has made critical judgment in the process of applying its accounting policies that have the most significant effect on the amounts recorded in the Company's consolidated financial statements include the determination of the Company's functional currency.

Information about key assumptions and estimation uncertainty that has a significant risk of resulting in a material adjustment to the carrying amounts of the Company's assets and liabilities within the next financial year are referenced in the notes to the consolidated financial statements as follows:

- Estimates of the measurement, valuation and period of use of the Company's mineral property interests;
- Estimates of Black-Scholes Option Pricing Model inputs to estimate the value of the Companies share-based payment transactions; and
- Estimates and assessment of the recoverability of unused tax losses and deductible temporary differences.

The consolidated financial statements have been prepared on a going concern basis which contemplates the realization of assets and the payment of liabilities in the ordinary course of business. If the Company is unable to continue as a going concern, it may be unable to realize the carrying value of its assets and meet its liabilities as they become due.

The Company is an early-stage entity focused on the exploration of mineral sites with a view of commercialization. The underlying value of the mineral property interests is entirely dependent on the presence of economically recoverable reserves and the ability to secure and maintain title and beneficial interest in the properties. Should the Company fail to commercialize any of its sites, its ability to obtain additional financing to sustain operations may become impaired.

During the year ended June 30, 2024, the Company incurred a net loss of \$524,243, used \$409,673 in operating cash flows, and has an accumulated deficit of \$1,146,119. The consolidated financial statements do not include any adjustments that may be necessary and material in nature if the Company is unable to continue as a going concern.

The Company does not have any off-balance sheet arrangements.

PROPOSED TRANSACTIONS

The Company initially recognizes a financial asset on the trade date at which the Company becomes a party to the contractual provisions of the instrument.

Upon recognition of a financial asset, classification is made based on the business model for managing the asset and the asset's contractual cash flow characteristics. The financial asset is initially recognized at its fair value and subsequently classified and measured as (i) amortized cost; (ii) fair value through other comprehensive income ("FVOCI"); or (iii) fair value through profit or loss ("FVTPL"). Financial assets are classified as FVTPL if they have not been classified as measured at amortized cost or FVOCI. Upon initial recognition of an equity instrument that is not held-for-trading, the Company may irrevocably designate the presentation of subsequent changes in the fair value of such equity instrument as FVTPL.

The Company derecognizes a financial asset when the contractual rights to the cash flows from the asset expire, or it transfers the rights to receive the contractual cash flows on the financial asset in a transaction in which substantially all the risks and rewards of ownership of the financial asset are transferred. Financial assets and liabilities are offset and the net amount presented in the consolidated statements of financial position when, and only when, the Company has a legal right to offset the amounts and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously.

A non-derivative financial asset is measured at amortized cost when both of the following conditions are met: (i) the asset is held within a business model whose objective is to hold assets in order to collect the contractual cash flows; and (ii) the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding. Such assets are recognized initially at fair value plus any directly attributable transaction costs and measured at amortized cost using the effective interest method subsequent to initial recognition, loans and receivables are measured at amortized cost. The Company measures its GST/HST receivable as a financial asset measured at amortized cost.

A financial asset is measured at FVTPL unless it has been measured at amortized cost or designated as FVOCI. Financial assets measured at FVTPL are carried at fair value in the statements of financial position with changes in fair value recognized in profit or loss at the end of each reporting period. The Company measures its cash and investment as financial assets at FVTPL.

All financial liabilities are recognized initially on the trade date at which the Company becomes a party to the contractual provisions of the instrument. Such financial liabilities are recognized initially at fair value plus any directly attributable transaction costs. All financial liabilities are measured at amortized cost, except for financial liabilities measured at FVTPL. A financial liability may no longer be reclassified subsequent to initial recognition. Subsequent to initial recognition, financial liabilities are measured at amortized cost using the effective interest method.

The Company derecognizes a financial liability when its contractual obligations are discharged or cancelled, or when they expire. The Company classifies its accounts payable and accrued liabilities as financial liabilities measured at amortized cost.
