

Neotech Metals Begins Field Work on its Foothills Project, British Columbia

Vancouver, British Columbia--(Newsfile Corp. - May 15, 2024) - **Neotech Metals Corp. (CSE: NTMC) (OTC Pink: NTMFF) (FSE: V690)** ("**Neotech**" or the "**Company**"), a rare-earth mineral exploration company, is pleased to announce the start of its summer field program on its 100% wholly-owned Foothills project in British Columbia, Canada.

Ground-based geophysics, rock and stream sediment sampling, geochemical soil, and biogeochemical sampling focusing on the anomalous British Columbia Geological Survey ("BCGS") stream-sediment samples will be used to aid in targeting any potential discoveries. Using this methodology has led to significant discoveries in the past (e.g., Brummer et al. 1987).

Teamed up with Anomalous Exploration Ltd, Neotech employees, and contractors will focus on samples to be taken on a regional scale and sent into labs for assay to prepare for a mapping and prospecting program planned for later this year.

The ongoing BCGS survey, along with recent literature, ranks the region as highly prospective due to the elevated concentrations of rare-earth elements scoring in the 98th percentile across the survey, conducted across the entire province.

The recent BCGS publication (January 2024) can be found [here](#).

Reagan Glazier, CEO of Neotech Metals, commented: *"We're excited to commence work on this highly prospective ground and to be able to gain access to the property this early in the season due to the diminished snowpack, allowing us to systematically explore the region in multiple phases within a single year."*
