**GOLDEN RAPTURE**  
— MINING —

**CSE: GLDR**

**June 4th**  
**12:20 pm et / 9:20 am pt**

Golden Rapture Mining recently announced a total of 61 well-mineralized samples were sent to the lab and are pending results from the Combined Mine area with an additional 26 also recently sent last week from the Young's Bay Occurrence.

Golden Rapture's priority targets include:

Combined Mine: Of main importance are four (4) main veins (three steeply dipping & one large flat-lying up to 12 meters thick with 762 metres of strike length). It has seven (7) shafts with some drifting with many trenches, pits, and visible gold documented. Recent Golden Rapture sampling results as high as 125.00 g/t Au

Young's Bay Occurrence: Has six (6) parallel quartz veins, four of which have visible gold with 262 meters in strike length. In 1949, approximately 7.3 tonnes of material was taken from shaft #1 to a depth up to 3.7 meters yielding an astonishing grade of 769.81 g/t Au. Recent Golden Rapture sampling results as high as 204.00 g/t Au.

### About Golden Rapture Mining

Golden Rapture Mining is a well-funded exploration company engaged in the acquisition, exploration, and development of high-potential assets located in favorable, established Tier 1 mining jurisdictions being the Rainy River and Geraldton areas of NW Ontario, Canada. The company holds a 100% interest in the high-grade Phillips Township Gold Property, Rainy River District, N.W. Ontario. Land package totals 236 claim cells for approx. 10,000 acres located in proximity to 4 mineral deposits.

These include the New Gold Rainy River Mine (+8 million Oz.), the Cameron Lake Deposit (1.8 million Oz.), the Agnico Eagle-Hammond Reef deposit (3.3 million Oz.), the Tartisan Nickel, Copper, Cobalt Deposit and many others. The project has great local infrastructure, manpower, heavy duty equipment, hospital, major Hwy and local services nearby.

Golden's second property includes the past-producing Hutchison/Maylac Gold Mine located in the Geraldton Gold Camp, Greenstone, NW Ontario. It was one of the richest mines in the area and was mined underground on and off from 1937 to 1947. The highest historical drill intersection included results as high as 24.16 oz/t/gold. The property has only seen shallow drilling and was only mined to a depth of around 400 ft. and lies in the shadows of the new Greenstone/Equinox Gold Mine. Golden would entertain a JV with the right partner.

### About RMEC

RMEC (Resource Mining & Exploration Conference) is a unique virtual investor conference. The goal is to expose new investors, as well as our global network of retail and institutional investors, to vetted Exploration & Mining opportunities. The number of companies is limited, and the content is curated with investor time and interest being paramount. While not exhaustive by design, RMEC aims to present potential investments to new and seasoned resource investors by presenting highlights for further research.

Each participating company hosts a live presentation followed by a Q&A period within approximately a 40-minute slot. The goal is to help investors learn about the junior companies that are shaping the future of the Global Resource Sector within a responsive and pressure free environment.

RMEC will present up to six junior exploration companies, as they seek to discover the next world class mines. Investors can get more detail about RMEC at [www.rmeconferences.com](http://www.rmeconferences.com)
