Leveraging the power of cutting-edge AI technology, users can now upscale materials generated from text prompts to an astonishing 4K resolution. This innovative advancement builds upon the platform's widely praised AI-powered material creation template, as [detailed in a recent press release](#). Users can effortlessly craft physically based rendering (PBR) materials directly from text prompts, streamlining the content creation process.

Initially, the materials are generated in a highly efficient 512px resolution, designed for optimal performance. This ensures that users can quickly iterate through text prompts until they achieve their desired output, making it an ideal solution for prototyping. What sets this feature apart is the subsequent upscaling capability. Users now have the choice to upscale their materials, utilizing AI technology, to resolutions of **1K, 2K, or an impressive 4K**. This upscaling empowers users to attain the highest quality textures, resulting in a remarkably photorealistic feel to their creations.

This feature has been in high demand, particularly from professionals in the manufacturing, design, marketing, and sales disciplines. This enhancement demonstrates Toggle3D.ai's ongoing dedication to delivering the most advanced tools and capabilities to valued subscribers. The 4K upscaling feature is exclusively available to Toggle3D Pro users.
